47-7682

1. kwalker 7/22/2005 Reinstatement

Comment: Review of our records found that proof of beneficial use had been filed on this permit and a field exam conducted by a certified examiner but exam did not have this permit file number included on it. See memo of 8/13/2004 in file which details the history of this file. Permit was reinstated and can now be licensed.

2. kwalker 7/22/2005 Source

Comment: Examiner recommended we add wastewater as a source for this license. I discussed with Shelley and it was determined that we cannot add wastewater to this right.

3. kwalker 7/22/2005 Volume

Comment: Recommended volume is based on USGS stream flow records for the springs under this system. Gaging station No. 13090370 which is same information examiner used to determine flow. We pulled in the stream flow records for the years available (5/1985 thru 6/1989) into excel and formulas were created that determined the exact volume available for this permit. Found these amounts available for full years of records 1986 = 4662.9, 1987 = 3239.3, 1988 = 2554.2. Recommend licensing volume found in 1987 as done on Permit 47-7679.

4. kwalker 7/28/2005 Contract with Idaho Power

Comment: Contract with Idaho Power expires 35 year from 12/30/1983 therefore recommend 12/30/2018 as license review by the Director.

5. dgibson 12/28/2004 Reinstatement

Comment: During review for issuance of a license for 47-7679 it was found that the department had some problems in getting a field exam in the file for this permit. The problem was fixed in October of 1989, but the permit was not reinstated. Therefore a reinstatement order was prepared and issued on 12/29/2004 reinstating this permit with an advance in priority to June 23, 1982. Basis for reinstatement was partially a department error and an error by the field examiner, CE Brockway.
