Dan –

The Church was able to track down well and pump information for statutory claim 63-4949. The well was drilled by Cliff Adamson. I spoke with Mr. Adamson who indicated that he drilled a 6-inch well in 1951 or 1952 to 90 feet. It was his donation to the church construction project. He had a pump business and did not normally drill wells at that time, so he hired a rig and crew from Hosac Drilling to work with him. He will be sending me a signed statement with that information. I will forward it on to you. I assume that this will be adequate to support the January 1, 1954 priority date.

Adamson Pump and Drilling Company sent me file information from some pump work in the 1970s and 80s. In 1976 they replaced a 5 hp submersible pump motor. In 1985 they installed a new 5-hp submersible pump (45T05). Assuming a pumping water level of 50 feet, a discharge pressure of 60 psi, and a pump efficiency of 55 percent, a 5 hp pump will produce approximately 54 gpm. The pump model number suggests a nominal 45 gpm pump. This information supports the claimed rate of 0.09 cfs (40.5 gpm) for irrigation purposes. I am mailing pump receipts to you for your records.

Let me know if you need any additional information. Thanks.

Terry

Subject: LDS Church Transfers on water right 63-04949

Hello Terry,

I had a reminder come up about these transfers. I sent a letter on 10/20/04 to you concerning the need for a information on the priority date and flow rate of 63-04949. I didn't receive a response or a request for additional time for this one. What do you want us to do from here? Please let me know within the next two weeks.

Thank you Terry.
