CONDITIONS/REMARKS:

1. The maximum diversion volume is defined as the maximum allowable volume of water that may be diverted annually from the source under this right. The use of water confirmed by this right is limited to the amount which can actually be beneficially used. The maximum diversion volume may be adjusted to more accurately describe the beneficial use or to implement accepted standards of diversion and use efficiency.
2. This water right is appurtenant to the described place of use.
3. This right is subject to all prior water rights and may be forfeited by five years of non-use.

PROOF ACKNOWLEDGMENT LETTER

RE: PERMIT NO. 57-07515

Dear Permit Holder:

The department acknowledges receipt of the proof of beneficial use form submitted for the above referenced permit. The next step in the process of developing a water right is for the department to conduct a field examination to determine and confirm the use being made of the water.

I note that the permit issued to you by the department requires the installation of a lockable device to allow the department to determine the rate of diversion. The proof which you submitted does not show that you have installed this equipment.

The installation of the lockable device must be complete by the time the department representative conducts the examination of your system unless the department has rescinded the requirement prior to the field examination. In some cases, the equipment requirement can be rescinded because the equipment cannot be physically installed, is not appropriate or can be accommodated with other measuring methods.

If you have questions concerning this matter, please feel free to contact the WESTERN Regional Office in Boise at (208)334-2190.

Sincerely,

Rita Fleck

NAME OF PARTY Paul Terrence - BLM Boise Dist.EMPLOYEE Steve LesterRE: Recent BLM applications for permit:

(1) applications where "PIT TYPE RESERVOIRS 50'x100'" are shown:

use $5\frac{1}{2}'$ as mean depth to calculate actual volume stored. Each appl. = 1 reservoir, want 1 appl. for each reservoir (v. combining several into 1 appl.).

(2) Also -

OK to modify water use descriptions based on ints in appl. & add appropriate cfs based on # hd. if applicable.

For example:

if 225 hd cattle shown, rate = .07 cfs from IDWR chart.

$(.07)(19835) = .1$ A.F./24 hrs. can be stored

Reservoir = $50' \times 100' \times 5.5' = 27,500$ cu ft.

Thus, appl. should include:

a) .07 cfs Stockwater

b) 0.6 A.F. Stockwater Storage

c) also show same amounts for wildlife, although

d) not additive.

Not necessary to show use from storage since water will not be diverted from reservoir.
