E. NARRATIVE/REMARKS/COMMENTS

Terrace Lakes Resort consists of 495 total lots and are limited to building on 450. Approximately 290 lots had been developed at the time of my exam. Permit 65-12985 was previously examined and recommended for a system capacity of .20 cfs and 144.8 afa from 2 wells for domestic use and 25.8 acres of yard irrigation within the resort. This permit was filed to provide additional ground water to the system to increase capacity.

The exam for permit 65-12985 was conducted in 1993. At that time, well 1 was equipped with a 5 hp pump and well 2 was equipped with a 10 hp pump. The exam for this permit was done in 2001. Valley pump recently worked on the wells and provided updated information. Well 3 had been added to the system and was equipped with a 2 hp pump. Well 1 was still equipped with the 5 hp pump, however well 2 now used a 1.5 hp pump rather than the 10 hp pump found in 1993. If looking at the system as a whole, overall capacity has actually decreased, which defeats the purpose of this permit. Steve Lester

said to only focus on the additional capacity of well 3 since the other two wells have been previously recommended for licensing based on the 1993 field exam findings.

Well three is equipped with a 2 hp submersible pump, capable of providing an additional .07 cfs and 50.7 afa to the existing system. The ground water from well 3 is diverted directly into the 4" mainline, which is used to deliver water to the lot owners. When combined, rights 65-12985 and 65-13457 are limited to a total system capacity of .27 cfs and 195.5 afa for 450 lots.

Have conditions of permit approval been met? ☐ yes ☒ no (No measuring device at well head)

F. FLOW CALCULATIONS

Measured Method:

 Y Additional Computation Sheets Attached
(Pump Curve)

Pump Curve: 30 gpm = .07 cfs

TDH = 200-250 feet per Valley Pump

G. VOLUME CALCULATIONS

1. Volume Calculations for Irrigation:

 $V_{IR} = (\text{Acres Irrigated}) \times (\text{Irrigation Requirement}) =$ $V_{DR} = [\text{Diversion Rate (cfs)}] \times (\text{Days in Irrigation Season}) \times 1.9835 =$ $V = \text{Smaller of } V_{IR} \text{ and } V_{DR} =$

2. Volume Calculations for Other Uses:

 $450 \times .6 = 270 \text{ afa}$ $.07 \times 365 \times 1.9835 = 50.7 \text{ afa}$ **H. RECOMMENDATIONS**

RE: PERMIT NO. 65-13457

Dear Permit Holder:

The department acknowledges receipt of the proof of beneficial use form submitted for the above referenced permit.

Enclosed is an order reinstating your permit since proof was submitted after the proof due date of September 1, 1996. Please note that the priority date has been advanced to June 27, 1993.

Be advised that Section 42-248, Idaho Code, which became affective on July 1, 1996, requires you or the owner of this water right to maintain current ownership and address records on file with the department. Please contact any office of the department for the proper form to file a change of ownership of a water right and/or a change in the address of the owner. Failure to maintain current records with the department could result in the assessment of a monetary penalty.

The next step in the process of developing a water right is for the department to conduct a field examination to determine and confirm the use being made of the water. If you have questions concerning the field examination, contact the **WESTERN** Regional Office in at (208)334-2190.

RE: PERMIT NO. 65-13457

Dear Permit Holder:

One of the conditions of approval of the above referenced water permit was that proof of the extent of your beneficial use must be submitted to this office on or before September 1, 1996. This right is supplemental to 65-12985, using the same storage facility and delivery system to same units. 65-12985 was obtained supplemental to surface water supplies for domestic use; however new drinking water criteria have forced the abandonment of the surface water supply for the subdivision. This app., per Ilene Johnson, corporate secretary, is to provide for the required backup well and additional flow necessary from g.w. source. The existing well is also listed on the application.

RE: IDWR - Public Waters Appropriation Permit
Permit No. ~~65-13457~~

Dear Mr. Tuthill:

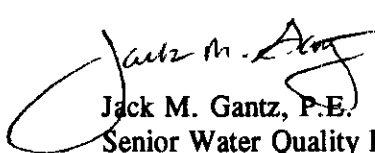

The project must be conducted under the design and supervision of an Idaho registered professional engineer. The process to follow is:

1. The engineer must submit a preliminary site evaluation based on proximity of pollution sources. We will evaluate the proposal, conduct a site inspection, and issue a written site approval if warranted. The applicant should give his consultant the enclosed checklist.
2. Detailed plans and specifications must be submitted to this office for review. The well may not be drilled until all approvals are obtained from both the Division of Environmental Quality (DEQ) and the Department of Water Resources (IDWR). The last approval will come from DEQ; we will not issue approval until final approvals of both IDWR permits (appropriation permit and well drilling permit) have been submitted.
3. This will be a Public Water System and must have one (1) source of water for less than twenty-five (25) connections and two (2) sources for twenty-five (25) or more connections.

We will pay particular attention to the following items:

1. Construction must be done under the general supervision of the professional engineer. The contract assuring this must be submitted with the application.
2. Numerous water quality parameters must be tested as soon as the well is completed.

Sincerely,

Jack M. Gantz, P.E.
Senior Water Quality Engineer
