RE: Transfer #71772 for Water rights 29-2292, 29-13143, & 29-13144

Dear Mr. Rupp:

As part of the review of the application for transfer a aerial photo is used to outline the place of use, and determine the acreage.

The program used calculated a total of 365 acres matching your application; however, the total acres per quarter-quarter were slightly different. To assist you I have enclosed an aerial photo and an aerial view without the photo of the place of use. The acres that were calculated in each quarter-quarter are indicated in **black** and the acres on your transfer are in **red**.

Please review the aerial photo and aerial view, and compare your acreage calculations with what was calculated. Then complete one of the following items:

1. If you believe your acres are more accurate you may notify me by calling the number located in the letterhead.
2. If you believe that the acres calculated are more correct then you will need to amend the transfer. To assist you I have also enclosed a copy of Part 1 of the transfer with changes noted. Please initial each line that indicates that those items are to be changed, and return that page to this office Attn: Keith C. Wilson.

Your prompt response on or before March 28, 2005, will be appreciated.

Thank you,

Keith C. Wilson
Senior Resource Agent
