RE: Water Right 45-4258B & Transfer Application #71611

Since receiving your letter of April 8, 2005 I have been measuring the water used at our feedlot to ascertain that we are not exceeding our allowed water right. After checking the inflow and outflow from our stockwater pond I found the water going to the cattle pens is in the 25 to 30 miners inches (.50 to .60 cfs) range. After flowing through our water troughs, part of this water flows back to the irrigation ditches of Double C Farms, which is owned by Lambert Produce. It is required by our Stock Water Agreement with Lambert Produce that all water not used by the cattle, is to be returned to their use for irrigation.

When Robert and Fredona Schenk purchased the feedlot from Lambert Produce they knew that they would need more water to expand the cattle feeding operation. That is why they bought the right to .60 cfs, through the Stock Water Agreement with Lambert Produce, to have enough water for the expansion.

Please feel free to contact me for more information or to schedule a visit to see how our water system is set up.

Sincerely,

Dallan Schenk
