Re: Permit # 84-12176

Mr. Keen:

Please find enclosed the form Proof of Beneficial Use. I'm not sure of when the well was actually drilled and I don't have the permit number. I know it was output tested by the previous owner, Brad Rust, on September 15, 1993, by a company called TPM Water Systems. That paperwork is enclosed, indicating that a company named Burns drilled the well. Owners of this property before the Rusts were James F. Bayless and possibly someone named Fastino Ramouse. Any of them may have applied for the permit to drill the well. I also enclosed the source of that information.

I didn't know what to put on the Proof of Beneficial Use form for when the well was drilled and the permit number. Per our telephone conversation today, I was under the impression that someone might try to look up the drilling permit. That would be very much appreciated. I thought this information might be useful. I have also enclosed a \$50.00 check for the examination fee. You had indicated this examination would probably occur next summer during the irrigation season. You and/or other IDWR staff are welcome anytime.

Thanks for your continued assistance in this matter.

Nitrates:	ppm
pH:	

QUANTITY	ITEM DESCRIPTION	PRICE	AMOUNT
----------	------------------	-------	--------

9-15-93 Service Trip to test-pump well for property sale. Ed 4.6hr

The pump started pumping at 15 GPM, and never changed throughout the test.

The water level in the well drew down from ~40 ft down to the pump level at 73 ft, but did not 'break suction'.

We would estimate that this well would do every bit of the original 10 GPM that it had when it was drilled and possibly even more.

This well should be quite satisfactory for household use, and even a fair sized lawn and garden.

If we may be of further assistance, please call.

Thank You,

Paul E. Shafer
Owner
