Welcome

Welcome to the Hydroscreen Web site. The flat plate configuration of wedge wire and the tilted wire Coanda Effect Hydro-Shear screens have found many uses in industry, hydro-power, agricultural, and the water resource management fields where physical and environmental constraints require liquid-solids separation and/or species protection.

We have developed numerous configurations of screening products to perform a variety of functions, including water quality screens, fish exclusion, debris and sediment removal from hydro turbine intakes, agricultural water diversion, and industrial water treatment.

We are continually looking for new applications and for ways to improve the product and adapt the unique features of the wedge wire screens. Please consult our Web page regularly for new products and applications.
