Allen,

Attached is a revised copy of my spreadsheet. I changed the consumption figures from .56 to .45 which is the maximum as I calculated that the Jones' used.

I've inserted a column under cfs labeled "re-diversion" which reflects the amount of water flowing through the ditch back into the Almo Creek "pond" behind their headgate. Since I had no device prior to June 6, I charged them with their maximum of .56 cfs. The first two day's measurements, however exceeded that amount.

I will change my final report accordingly. If any questions arise, please feel free to contact me - email works best for me.
