1. kwalker 12/7/2004 Subdivision Lots

Comment: While reviewing this application I could only identify 93 lots for single family domestic use. I contacted Tom Hunter who initially said that I could cut the permit back to 93 lots. After several telephone conversations Mr. Hunter was determined that we should issue for 97 lots as applied for. Since the number of lots to be developed will not effect the amount of water to be permitted, I recommend approval showing 97 single family domestic lots.

2. kwalker 11/9/2004 Points of diversion

Comment: While preparing GIS shape for the points of diversion I found that the point listed as being within SWSE was actually located in the NESE of same section.

Returned to region for clarification of the locations and was advised that I had identified the points correctly. Region decided not to readvertise since subdivision has been in place since 1981 and all in area are aware of what is happening out there. Have prepared permit with corrections to point of diversion description.
