

WATER RIGHT OVERLAP DIAGRAM

License 61-2186 was licensed to a single well in the SWSE for 158 acres. Licenses 61-2220, 61-7060, and 61-7222 were licensed to two wells in the NESE and NWSE for a total of 800 acres. 61-7222 was licensed on the same 158 acres described in 61-2186 plus an extra 2 acres to allow irrigation from the main two wells, which is acceptable because it is a separate source.

Same 3 wells as above

Transfer 4235 combined all of the wells with conditions limiting the water rights when combined to 16.00 cfs and 800 acres of irrigation. However, license 61-7222 was not reduced to 2 acres and 0.04 cfs even though it allowed licenses to exist on the same 158 acres described in 61-2186 for an excess of 0.02 cfs per acre from the same sources of water.

MY PROPOSAL FOR NEW TRANSFER

61-7222 ALL IRRIGATION RETIRED	61-2186 60 ACRES 1.20 CFS/ 240 AFA	61-2186 98 ACRES 1.96 CFS/ 392 AFA RETIRED	61-2220 320 ACRES 6.40 CFS / 1280 AFA	61-7060 320 ACRES 6.40 CFS / 1280 AFA
--------------------------------------	---	---	---	---

LICENSE 61-7222	LICENSE 61-2186
0.03 CFS / 3.9 AFA STOCKWATER	1.39 CFS / 192.1 AFA STOCKWATER
0.01 CFS / 1.6 AFA COMMERCIAL	0.57 CFS / 78.4 AFA COMMERCIAL
0.04 CFS / 5.5 AFA TOTAL	1.96 CFS / 270.5 AFA TOTAL

This new transfer proposes to dry up lands for a new dairy. Per the consultant's calculations, the 100 acres of ground at a consumptive use of 2.76 acre feet per acre will need to be retired to cover the dairy use. After the transfer 4235 water right 61-7222 can only supply water to 2 acres in the irrigation system, so it is not feasible to split this right. Therefore the entire 2 acres associated with 61-7222 will go towards the commercial and stockwater uses associated with the dairy. That leaves 98 acres left to be retired from the irrigation system. The applicant requested that all of the 98 acres for the dairy be removed from 61-2186. Jeff Peppersack and Steve Lester agreed that the above proposal was acceptable. The water rights were split based on a 71% of the diversion rate and volume available from each right for Stockwater and 29% available diversion rate and volume from each right for commercial uses. The volumes required in the dairy calculation sheet determined the percentages.
