Re: sufficiency memo

This application proposes to tie two existing wells together which are located in the same ESPA model grid (R9, C21) and create a PPU out of the rights originally associated with the wells. The PPU proposed is slightly larger than the acres allowed to be irrigated in any one season.

Authority to File:

The applicant is the present owner listed on the database for all rights involved in the transfer. Included in the file is a notarized statement agreeing to the transfer application from the mortgage holder (Rabo AgriFinance)

Water Right Validity:

Validity of the rights involved: The rights involved have been partially decreed in the SRBA.

Injury to Other Water Rights:

None apparent.

Enlargement of Use:

Does not appear to be enlargement of use if conditioned appropriately to limit instantaneous diversion rate and overall volume as well as total acres irrigated in any one season.

Local Public Interest:

No adverse impacts identified. It would be in the local public interest to allow flexibility in use of wells to more efficiently utilized power and water.

Beneficial Use/Conservation of Water Resources:

See above.

Review of the application finds there is no clear inconsistency with criteria set forth in Section 42-222 Idaho Code preventing processing of this application.

Other issues: None identified.
