1. kwalker 5/5/2003 Public Water Supply

Comment: I contacted DEQ in Coeur d Alene this morning to find out if there was a public water supply number for this system. I was told their number is: PWS#1110019. I was also told that the well in this system is high in uranium. The association may need to make some decisions about their water source in near future.

2. kwalker 5/5/2003 Use of Water

Comment: I called and spoke with Mrs. Bob Dillin this morning regarding the use of water under this permit. Mrs. Dillin says that the school is for grades K-7 and does have showers in it. The store using water is very small and contains 1 restroom.

3. kwalker 5/5/2003 Recommended Volume

Comment: Examiner recommended that we change the nature of use under this permit to municipal use. Since permit was originally issued for domestic use, irrigation use and commercial use we must apply a volume to the municipal use. I determined that we could allow 3.0 afa for the school, 0.5 afa for the store, 20.4 afa for domestic and 27.0 afa for irrigation. See worksheet in file for how these amounts were determined. Total equals 50.9 afa for this recommended license.

4. kwalker 5/5/2003 Point of Div No. 1

Comment: While talking with Mrs. Dillin this morning she stated that the well in use for the association was located on her property. In completing the arc view for this permit I found that the Dillin property is west of the highway. I created the shape on the Dillin property, consistent with location attached to application for permit, rather than where the examiner indicated on maps attached to exam.

5. kwalker 9/3/2004 License Review

Comment: Following receipt of the licensing amendment which the permit holders had made a correction of the point of diversion on, our field examiner conducted a re-examination and found the point of diversion located where the permit holders had described on the licensing amendment. I recommend we proceed with licensing, using the amendment that the permit holders submitted in June of 2003 since it correctly identifies the point of diversion as developed. No other changes were made to the proposed license since amendment was signed and submitted.

6. kwalker 9/16/2004 Water usage

Comment: Today I talked with Mrs. Bob Dillin about the water used by this association. The association does not use any water from Mission Creek anymore. They use the well water only. We should remove the condition requiring them to use their surface water before pumping from their well. Mrs. Dillin gave me phone numbers to contact the president (George Hays 267-2881) and vice president (Will Parker 267-6733) in case we need further information. These gentlemen both work during the daytime and may be hard to reach by phone.

may be hard to reach by phone.

7. kwalker 10/7/2004 Mission Creek

Comment: Water is no longer used from Mission Creek in this system for this water association. Prepared an order removing the supplemental use condition.

8. DBALL 3/25/1996 DIVERSION DESCRIPTION

Comment: Diversion works will consist of wells with pumps, flow meters and piping to connect to the existing distribution system. POD owned by 1.) Bob Dillon and 2.) Albert Brackenbusch. Lease agreement exists with property owners. Well #2 existing. Well #1 proposed. Existing surface water rights 98-04296, 98-07613, 98-02037.
