CONDITIONS/REMARKS:

1. The maximum diversion volume is defined as the maximum allowable volume of water that may be diverted annually from the source under this right. The use of water confirmed by this right is limited to the amount which can actually be beneficially used. The maximum diversion volume may be adjusted to more accurately describe the beneficial use or to implement accepted standards of diversion and use efficiency.
2. This water right is appurtenant to the described place of use.
3. This right is subject to all prior water rights and may be forfeited by five years of non-use.
4. Modifications to or variance from this license must be made within the limits of Section 42-222, Idaho Code, or the applicable Idaho law.
5. This right, when considered with all other rights common to the same grazing allotment, shall be limited to the quantity of water beneficially used by the number of stock within the allotment.

FROM: Brenda Chapman
RE: BLM/USFS Stockwater Permit Rates
DATE: March 21, 1994

=====

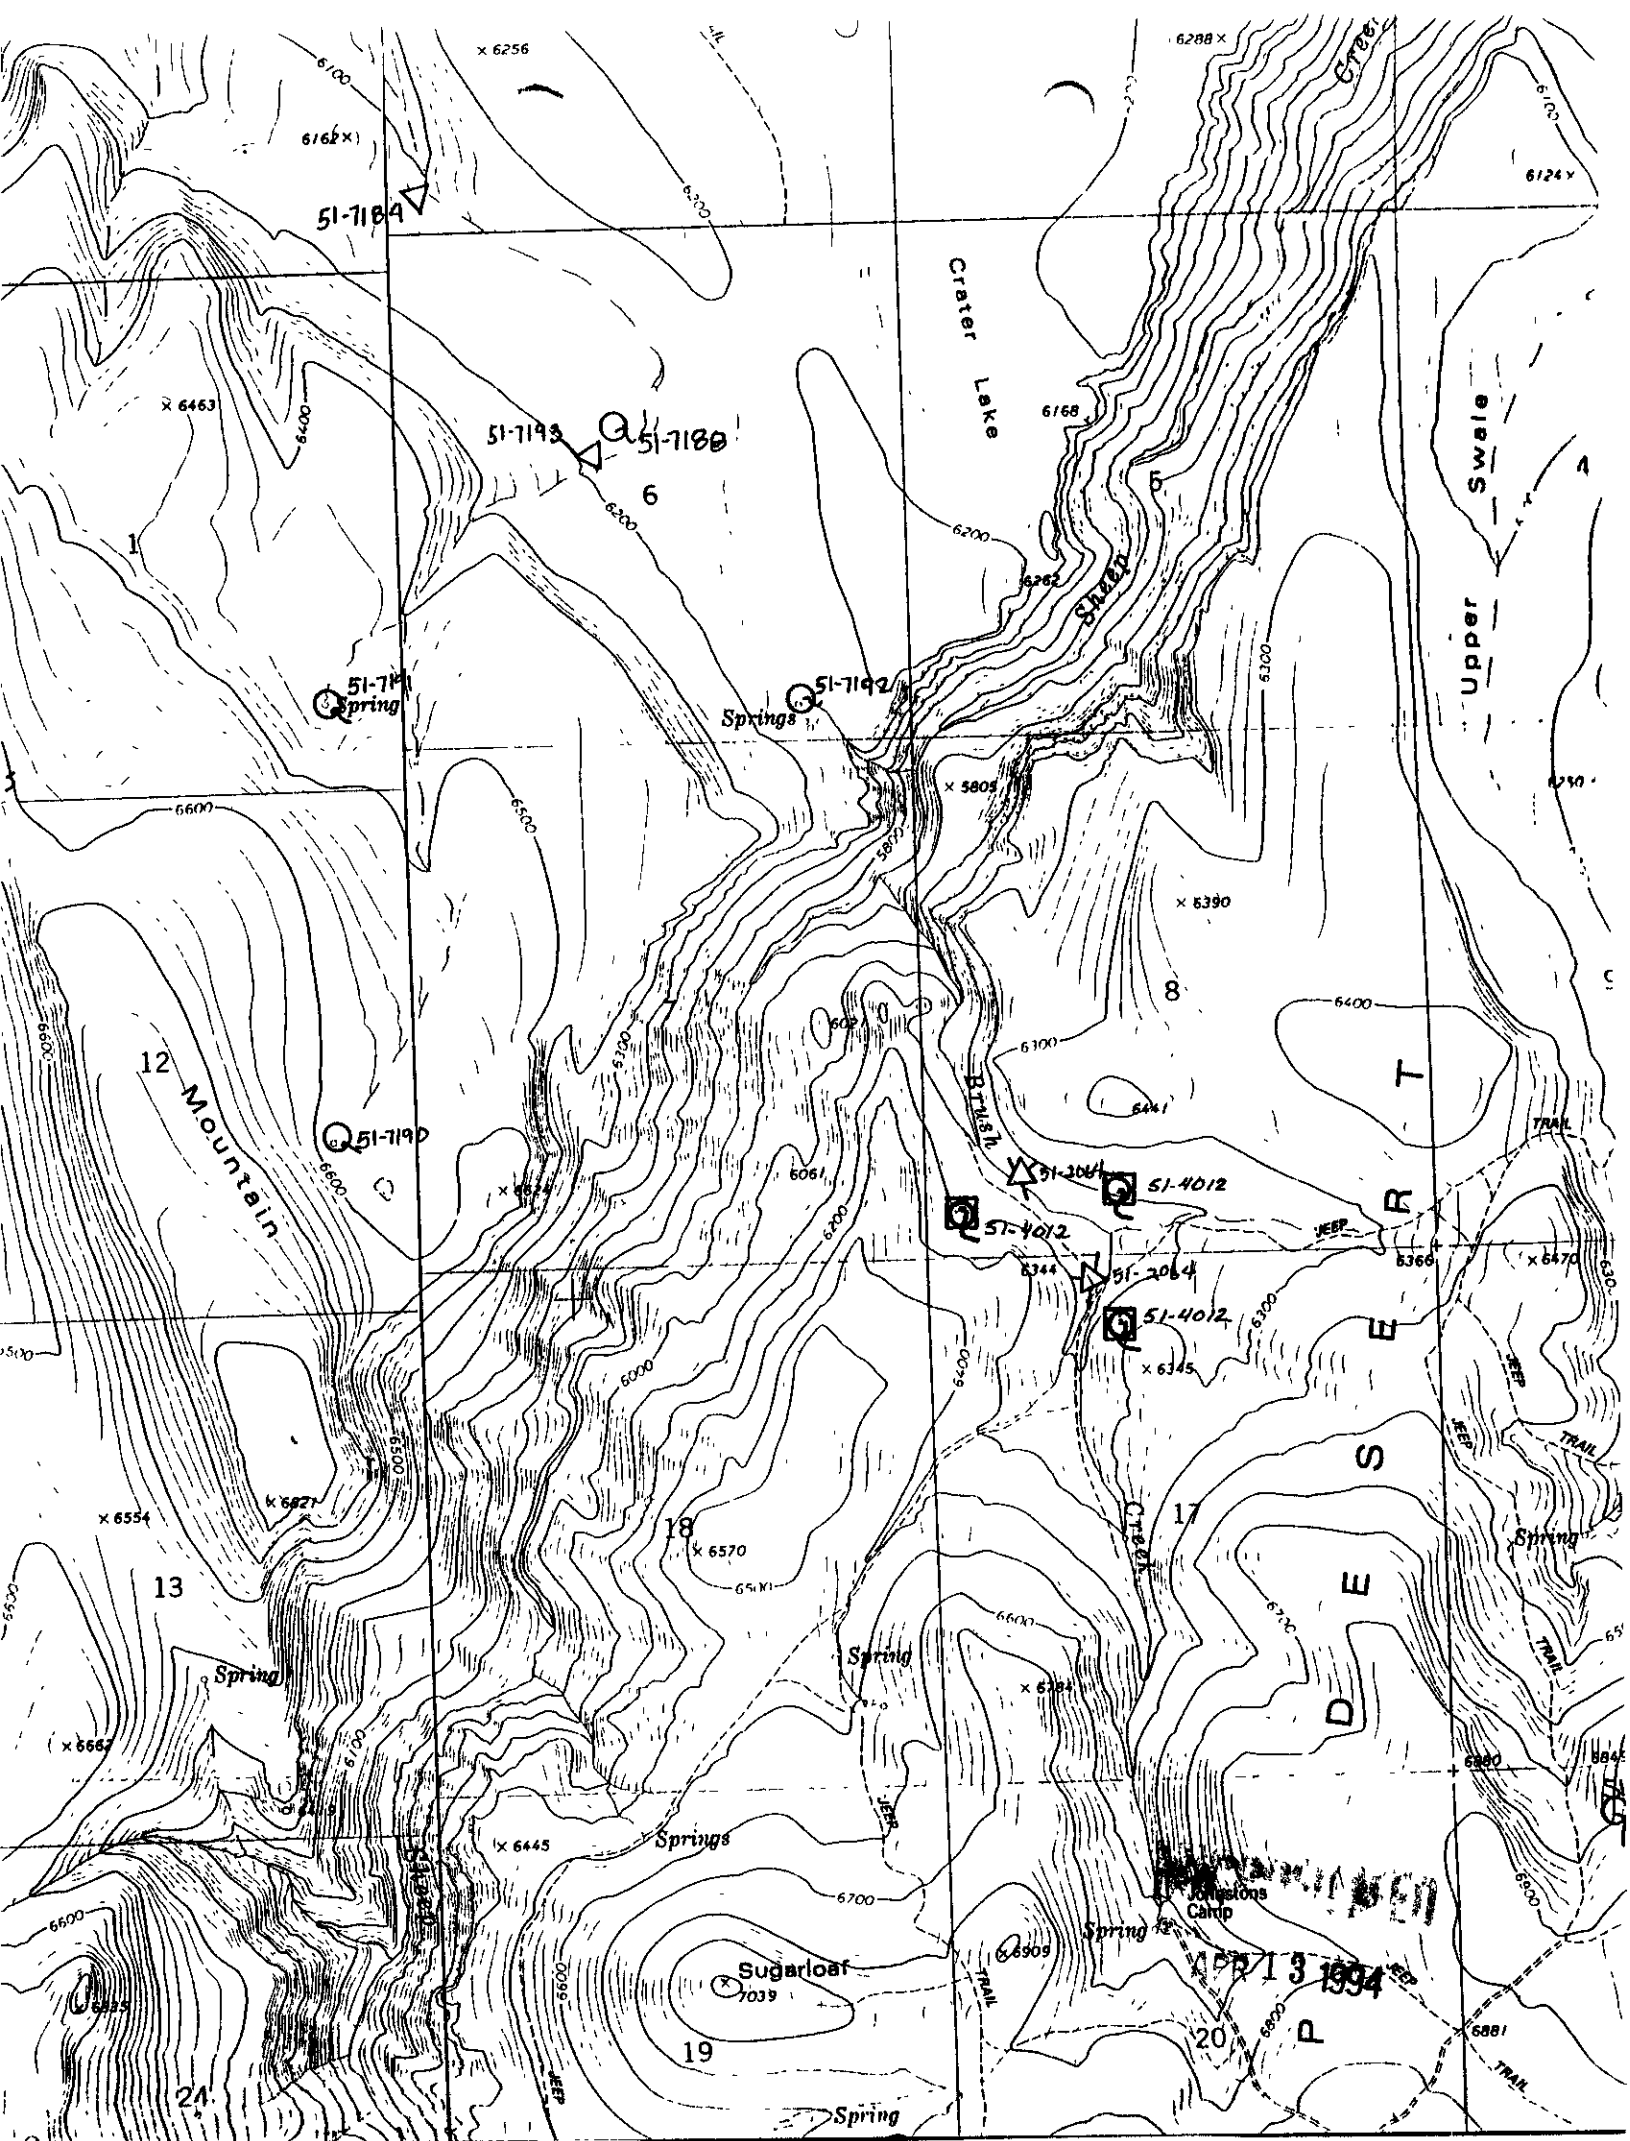

The following guidelines can be followed when the source is a spring and no measurements have been taken:

- 1) A standard 24 hr diversion rate of 0.01 cfs will provide water for up to 810 head of range cattle; however, we have been following a standard of .02 cfs for up to 1,000 head for BLM and Forest Service permits at the time of licensing (unless the flow has been measured and will not support that rate).
- 2) Over 810 head: calculate the flow by the multiplying the number of head by the factor .0000185. For the BLM and Forest Service permits over 1,000 head, calculate the rate by using the above referenced factor.
- 3) All volume requirements, use standard: $\text{vol} = \text{head} \times .0134$

Factor obtained by: $1 \times 12 \text{ gpd} / 1440 \text{ min} = 0.00833 \text{ gpm}$ $0.00833 \text{ gpm} \times .00223 = 0.0000185 \text{ cfs}$
