RE: BLM/USFS Stockwater Permit Rates
DATE: March 21, 1994

=====

The following guidelines can be followed when the source is a spring and no measurements have been taken:

- 1) A standard 24 hr diversion rate of 0.01 cfs will provide water for up to 810 head of range cattle; however, we have been following a standard of .02 cfs for up to 1,000 head for BLM and Forest Service permits at the time of licensing (unless the flow has been measured and will not support that rate).
- 2) Over 810 head: calculate the flow by multiplying the number of head by the factor .0000185. For the BLM and Forest Service permits over 1,000 head, calculate the rate by using the above referenced factor.
- 3) All volume requirements, use standard: $\text{vol} = \text{head} \times .0134$

Factor obtained by: $1 \times 12 \text{ gpd} / 1440 \text{ min} = 0.00833 \text{ gpm}$ $0.00833 \text{ gpm} \times .00223 = 0.0000185 \text{ cfs}$
