E. NARRATIVE/REMARKS/COMMENTS

A 16" well with a 300 HP Verti line pump can supply water to 276 acres utilizing pivot sprinklers. At the time of the exam, the sec 25 acres had been farmed in '94, with the pivot still in place. The sec 30 acres had been placed in the 0-92 grain program for the season and the pivot had been removed.

According to Dennis, when both pivots are used together, two 20 HP booster pumps are used. With only one pivot in operation, boosters aren't necessary. The corners of both pivots are irrigated with Grindstone Butte water, not ground water. No other water rts are used.

(This well has also been plumbed to fill a BM stock tank in sec 30 in case their stock well fails.)

Dear Permit Holder:

The department acknowledges receipt of the proof of beneficial use form submitted for the above referenced permit. The next step in the process of developing a water right is for the department to conduct a field examination to determine and confirm the use being made of the water.

RE: SWAN FALLS PROCESSING
PERMIT NO. 51-07155

DATE: 8-17-89

Mr. Dennis Smith visited the office today in response to my last letter dated May 26, 1989. This letter essentially asked the permit holder to provide some additional evidence that the groundwater source described under the permit had been put to use prior to July of 1985.

Mr. Smith provided a photocopy of a March, 1981 invoice for a well pump and motor. Also provided was a 1981 BLM memorandum describing the replacement of groundwater with Grindstone Butte Canal water on a nearby Desert Land Entry also owned or held by the permit holder. As per Sally Carpenter of the BLM (8-17-89), this DLE was patented in October of 1982. BLM files document that Grindstone Butte water was the source of water for irrigation of the entry, thereby indicating that the transfer of Grindstone water off of the lands under this permit had been completed in 1982.

Review of the file and additional evidence submitted by the permit holder indicates that the groundwater source under this permit was developed in 1981. An extension of time request submitted in late 1981 states the well had been drilled and used for irrigation in that year. The extension filed at that time, as well as the one filed in January of 1987, appear to have been made in order to allow more time for increasing the capacity of the well.

There appears to be sufficient evidence to confirm that the groundwater source was developed and used for irrigation of the lands under the permit. I recommend that the permit be exempt from further review requirements of Section 42-203D and be removed from the Swan Falls process list. The department should proceed with processing proof, conducting a field exam and licensing.

REPLY TO
ATTN OF: District Manager, BoiseI-6789
2520SUBJECT: Request for Change in Plan of Development and
Extension of Time for Final Proof, DLE I-6789, John R. Solosabal

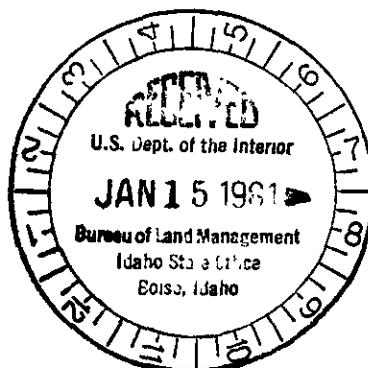

TO: State Director, Idaho (943)

The subject entry was field examined January 8, 1981, in response to a request by the entryman for a change in plan of development and a one-year extension of time to make final proof.

This entry was allowed on December 23, 1976, with Grindstone Butte Mutual Canal Company as the source of water. The entryman states in his request that it became apparent last year (1980) that the Grindstone system could not provide the necessary capacity to irrigate his entry. The entryman then drilled a well, which yielded water but not an amount sufficient for the entire entry. The entryman is currently in the process of drilling a second well but did not have time to complete it before final proof was due. The entryman has cultivated and has the irrigation system installed on approximately 120 acres of his entry for which he has the water. Not being sure BLM would allow an extension of time, the entryman did not make further expenditures on the remaining 200 acres. The mainline for this remaining portion of the entry has not yet been extended (see map that accompanied entryman's request), and the land has only been partially cleared and/or burned off.

The entryman's proposal to switch well water for Grindstone Butte water with Rockin S Ranch and Louis and Ruth Solosabal appears to be feasible, and all necessary agreements thereto have been submitted. It has also been clearly demonstrated that the entryman's inability to make final proof at this time is beyond his control.

Therefore, it is our recommendation that the change in plan of development and the request for an extension of time to make proof be approved and a one-year extension of time be granted.

RE: Permit Nos. 02-7226 and 51-7155

Dennis Smith
Box 939
Glenns Ferry, ID 83623

Dear Mr. Smith:

Enclosed is a \$20.00 refund for the re-advertisement fee which you paid earlier this year for Permit No. 02-7226. Since you submitted proof and evidence for the portion of the permit developed prior to July of 1985, the permit is not subject to the review of Section 42-203D, Idaho Code. That section of the code pertains to undeveloped permits which were named in the Swan Falls lawsuit.

When you last visited the office, we agreed that the situation surrounding Permit No. 51-7155, under the name of J.L. Solosabal, was very simple. I must inform you, however, that I have developed some concern about this permit.

The 1984 aerial photo covering the lands under Permit 51-7155 which you showed me definitely indicates that the lands were irrigated in that year with center pivot systems. After you left the office, I noticed that the permit included a statement that the pivot systems were in place at the time the application was made. This would mean that Grindstone Butte project water was at one time used with the center pivot systems. I wrongfully assumed that the center pivots were not installed until after the well was completed. The 1984 photo, therefore, does not necessarily indicate that the well water was used at that time. I did manage to find a well log which matched your well. That log confirms that the well was completed in 1981.

I suspect that the well was used to irrigate the lands prior to 1985. What confuses me somewhat is the fact that you mentioned Grindstone Butte water for this land was transferred to another location. The Grindstone permit does not show any such transfer. A field examination made for Grindstone by a private consultant lists all of your lands which are now irrigated by the well. My confusion lies in knowing whether or not the well water is either a supplemental or replacement source. Adding to this confusion is the question of confirming the date of first use associated with the well.

The best way to solve this problem is to provide some additional evidence which will show that the well was used prior to July of 1985. An affidavit or sworn statement from you or Mr. Solosabal along with an affidavit from another person familiar with the operation would provide sufficient evidence to document our records. This would prevent anyone questioning the Department's decision to exempt this filing from additional processing requirements under Section 42-203D.

I apologize for not discovering and solving the discrepancy at the time you were actually in the office. I am sure you will be as cooperative in this matter as you have been in the past.

Sincerely,

RE: PERMIT NO. 51-7155/SWAN FALLS REVIEW

DATE: 5-18-89

A relative of the permit holder was in last week to submit proof and finalize details concerning several permits of his own in the trust area as well as to submit proof and address any Swan Falls processing necessities on this permit. The relative, Mr. Dennis Smith, stated that the land under this permit had been irrigated with Grindstone Butte project water. The project water was transferred off of the lands under this permit and used to irrigate other tracts of land, presumably undeveloped lands.

In order to show that this permit was developed prior to July of 1985, Mr. Smith provided a 1984 ASCS photo showing the lands irrigated with two center pivot systems. The well described under the permit is used to irrigate the land with the pivot systems. Smith explained that the corners surrounding the circles are still irrigated with Grindstone Butte project water. Upon seeing the aerial showing the center pivots, I immediately assumed that the groundwater source under this permit was developed and used with the pivots in 1984. After Smith left the office, I reviewed the permit closer and found that the center pivot systems had been in place at the time the application was made and that the pivots were using Grindstone Butte water. There is now some question as to when the groundwater source was first used.

In regard to the Grindstone Butte water and the lands under this permit, I reviewed the Grindstone filing and found that a field exam was conducted by a certified examiner in 1987. This exam lists the same lands covered by permit no. 51-7155. It appears therefore that the Grindstone water appurtenant to this land which was transferred by the permit holder was never formally recorded with the department (the file does not show any transfer).

There are several questions relating to this file:

- 1) when was the groundwater source first put to use; and
- 2) should we require the permit holder and/or Grindstone Butte to file a transfer application to reflect the change in place of use as described above?

If I can determine that the transfer and groundwater use was initiated prior to July of 1985, then I can exempt the permit from any further review under Section 42-203D and not request a readvertisement fee.

Please provide your thoughts.

As per Jim; secure additional information for file prior to making any recommendation for exemption.

RE: PERMIT NO. 51-7155

Dear PERMIT HOLDER:

Due to the Swan Falls litigation, development proposed by the enclosed permit may have been delayed. The Department is presently reviewing the permit and may authorize completion of development proposed under the permit.

The purpose of this letter is to determine: (1) the extent of development under the permit, and (2) your continued interest in developing or completing development under the permit.

Enclosed are two forms which will help the Department expedite the reprocessing of the permit.

Please complete and return the enclosed questionnaire if you wish to continue with your plans of development or have completed all or a portion of your development before July 1, 1985.

Please complete the enclosed relinquishment form and return it to the Department if you have abandoned or have no interest in continuing with your plans for development of the project.

If the entire project was not completed prior to July 1, 1985, and you still wish to proceed with your plans of development, then you must submit a \$20.00 re-advertisement fee to the Department as required by Water Appropriation Rule 4,2,3. and Section 42-221F, Idaho Code.

Failure to return the questionnaire and pay any required re-advertisement fee within thirty (30) days of the date of this letter is cause for the Department to cancel the permit.

If the incomplete portion of your project is for irrigation of more than 200 acres, the Department will issue a notice requesting additional information as required by Water Appropriation Rule 4.5. (complete)
