NOTICE OF CLAIM TO A WATER RIGHT NO. 36-4011

Notice is hereby given that Thousand Springs Trout Farms, Inc., P.C. Box 232, Buhl, Idaho, has filed a claim to a water right established by diversion and application to beneficial use of 50.0 cubic feet per second of water from Billingsley Creek, tributary to the Snake River with point of diversion in the (NW 1/4 NW 1/4) Lot 1 (2 points), Sec. 19, T. 7S, R. 14E, B.M., Gooding County.

The water is claimed to be used from Jan. 1 to Dec. 31 for fish propagation purposes with a priority of December 1, 1965; the place of use is within Lot 4, Sec. 18, T. 7S, R. 14E, B.M.

Any exception to this claim of water right may be filed with the Idaho Department of Water Administration, Statehouse, Boise, Idaho.

STATE OF IDAHO
DEPARTMENT OF RECLAMATION
CLAIM TO A WATER RIGHT

Established by Diversion and Application to Beneficial Use

Under the provisions of Section 42-225a, Idaho Code, a person may file a claim to a right to use water which has been established by diversion and application to beneficial use. **The filing of this claim does not confirm the water right but will serve for information purposes only.** It may, however, become the basis for future adjudication of the water right by the Court.

(Please refer to the instructions on the back of this form)

1. Name of claimant Thousand Springs Trout Farms, Inc.
post office address P. O. Box 232, Buhl, Idaho

2. The point of diversion ^{two} ~~is~~ ^{are} in Lot 1 $\frac{1}{4}$ of (NW $\frac{1}{4}$ NW $\frac{1}{4}$) $\frac{1}{4}$ Section 19 Township 7S
Range 14E B.M. located on Billingsley Creek
(name of source)
tributary to Snake River in Gooding County.

3. Dates of priority claimed: list the priority for each separate quantity that you claim. Priority dates should be based upon the earliest diversion of the water which has resulted in continued beneficial use since that time. If there has been an interval of five years or greater when the water was not beneficially used for the same purpose as originally appropriated, the priority that you claim should date from the time that the water was again beneficially applied following the period of non-use.

a. Date of priority claimed:

December 1, 1965 amount: 50 c.f.s. or _____ acre feet
_____ amount: _____ c.f.s. or _____ acre feet
_____ amount: _____ c.f.s. or _____ acre feet
Total claimed _____ c.f.s. or _____ acre feet.

b. Explain the purpose for which the water has been used and the time during the year when you have used the right claimed:

use Fish propagation period of use from Jan. 1 to Dec. 31 (both dates inclusive)
use _____ period of use from _____ to _____ (both dates inclusive)
use _____ period of use from _____ to _____ (both dates inclusive)
use _____ period of use from _____ to _____ (both dates inclusive).

4. Description of diverting works:

a. Surface water diversion dam and/or headgate: material is composed of See Remarks
_____ ; length is _____ feet; height is _____ feet;
width at bottom is _____ feet; width at top is _____ feet; explain any increase in diversion capacity since structure was first built, giving dates and estimated capacities if known _____

b. Underground water diverting works: is well flowing or pumped _____ ; depth of well is _____ feet; diameter of well is _____ inches; type of pump is _____
capacity of pump is _____ g.p.m.; name and address of well driller is _____
_____ ;

attach well logs if available; has there been any change in pump or motor since well was first completed _____; if so, give dates and explain _____

c. Conveying works: length of ditch to place of use is _____ feet; width of ditch at top is _____ feet; width of bottom of ditch is _____ feet; depth of water is _____ feet; grade of ditch per 1000 feet is _____ feet; material through which ditch passes is _____; maximum length of pipe line to first place of use is _____ feet; diameter of pipe line is _____ inches; type of pipe _____; grade of pipe per 1000 feet is _____.

Please explain any changes or increase in size of conveying system since water was first appropriated, giving date and dimensions if possible. See Remarks

d. If water is stored: name of reservoir None ;
total capacity of reservoir is _____ acre feet; active capacity of reservoir is _____ acre feet;
year construction commenced _____; year completed _____; date first used _____
period of storage is from _____ to _____; is reservoir drained each year _____;
is reservoir on or off stream _____ explain _____

if feeder canal is used give maximum carrying capacity_____c.f.s.; if reservoir is off stream, describe location of reservoir by 40-acre subdivisions_____

has there been any enlargement of the reservoir since it was first built _____, if so, give dates and describe _____

5. a. Where water is used for irrigation, describe area irrigated by 40-acre subdivisions and give total acres:

[illegible]

Total number of acres to be irrigated_____

Explain any significant increase in area irrigated since first use, give dates and acreages if known _____

b. Do you get water through a ditch owned by several users? No If yes, give the name of the ditch
_____. The other users and their respective
interests in the ditch are (if known) _____

6. Where water is used for stock watering, give number of each kind of stock watered N. A.

7. Where water is used for domestic or municipal purposes give number of families served N. A.
name of town supplied _____

8. Where water is used for other purposes not above enumerated, give the nature of use, the extent of use,
and any details regarding the initiation of the right or subsequent later expansion. Be as specific as possible,
giving dates and quantities Fish Propagation -- See Remarks

9. Remarks: please explain any details of your claim which you feel need clarification or additional explanation
There are two points of diversion out of Billingsley Creek, both located in
Lot 1 of Sec. 19, T 7S, R 14E. The first diversion occurs on the south side
of the stream and diverts water for ponds on that side of the stream. The
water from these ponds is then returned to Billingsley Creek at a point in Lot 1
just below the second point of diversion.

The second point of diversion diverts water on the north side of Billingsley
Creek in Lot 1 and conveys it into Lot 4 of Sec. 18, T 7S, R 14E. The second
diversion is the larger diversion and is used in a series of ponds and raceways
that are located in Lot 4. These diversions and this water right occur in
connection with the diversion and the water right that is evidenced by License
#32600 in the name of Idaho Springs Trout Company, a subsidiary company of the
applicant. The licensed right is for only 100 second feet of flow. There is
more water utilized for fish propagation than is allowed by this license.
Because of the diverting works, their arrangement and the volume of water it is

State of Idaho

County of Twin Falls

ss.

Be it known that the undersigned, being duly sworn, deposes and says that he, she, they subscribed the
foregoing claim to a water right, together with all attached information, and that the matters and facts therein are
true to the best of the affiant's knowledge.

INSTRUCTIONS

Your claim should set forth all necessary information to describe your claimed right. Failure to give enough information may make your claim of little value. Some of the items in the form may not apply to your situation. Please use additional sheets if space provided is not sufficient to fully answer the questions.

Paragraph No.

1. Give full name and post office address of person or company making the claim.
2. Describe the point of diversion by 40-acre subdivision. Give the name of the source, the drainage to which it is tributary if surface water, and the county in which the point of diversion is located. If there is more than one point of diversion, list others in the remarks section.
3. Give the priority dates and the quantities of water that you claim. You should accurately list the dates that you initiated each new use of the water. List separately the dates and amounts of water involved in each enlargement of the diversion. (Example: if you diverted 0.8 c.f.s. of water for irrigation on May 18, 1871, for the first time for use on 40 acres of land, and then later you enlarged the diversion by diverting an additional 0.4 c.f.s. of water to irrigate an additional 20 acres of land on June 1, 1901, your right should be described as follows:

Date of priority claimed:	<u>May 18, 1871</u>	amount:	<u>0.8 c.f.s.</u>	or	_____	acre feet
	<u>June 1, 1901</u>	amount:	<u>0.4 c.f.s.</u>	or	_____	acre feet
		Total claimed:	<u>1.2 c.f.s.</u>	or	_____	acre feet

Since the water was used for irrigation between April 1 and October 31 on that particular farm, part b. would be completed as follows:

use irrigation period of use from April 1 to October 31 (both dates inclusive). If the water had been used for any other purpose, you would have described the priority date, amount, use, and period of use in a similar manner.

4. Describe the diversion works and explain any changes since the right was first initiated.
5. If the water is used for irrigation, give the total acreage and list the lands irrigated by 40-acre subdivisions and complete the other questions.
- 6, 7, & 8. Describe any other uses of water.
9. In the remarks section, give any information or details that you feel are not fully covered or that need clarifying. You might explain your operation, where the water is returned to if for an industrial or non-consumptive right, the condition and temperature of the returned water, and any other information to help explain your claim.

You may wish to include as a part of your claim, affidavits of witnesses who are familiar with your right and who have a personal knowledge of the circumstances which you have described in your claim. You may submit maps, drawings, certified copies of posted notices which may have been filed in the county courthouse, water measurement records, or any other document which you feel will support your claim.

Your claim will be advertised in a county newspaper for two weeks. Exceptions to your claim which dispute the water right that you have described may be received by the Department of Reclamation and you will be provided a copy of such exceptions.

The fee for filing this claim with the Department of Reclamation, Room 107, Statehouse, Boise, Idaho 83701, is \$10.00.

Remarks - Con't

difficult to acquire an accurate diversion measurement. However, a measurement was made on July 12, 1966, by Raymond J. Brossart, a professional engineer working for Charles W. Gladsby & Associates. Mr. Brossart measured 14 second feet on that day from the first point of diversion and 106 second feet from the second point of diversion. Therefore, on July 12, 1966, there was diverted 20 second feet more than could be covered by License #32600.

The flow of the springs is believed to vary from season to season and from year to year. It is estimated by the applicant that as much as 150 second feet totally have been diverted. Mr. Bossart's letter has been marked as Exhibit A of this claim.

Dave Erickson has worked on the property for some period of time and is presently employed as hatchery manager. His personal knowledge as to the size and extent of the ponds and the production from the ponds has been set forth in an exhibit in an affidavit which has been marked as Exhibit B and included in this claim.

It is the claimant's intent to supply additional affidavits and additional data as they become available, including statements concerning the first use of water on the property from Billingsley Creek, the additional flow measurements, and aerial photographs of property.

Remarks - Con't

In addition to these claimed water rights and the water right under License #32600, waters are also diverted from springs and used in the same facilities and these supplemental rights are evidenced by License #28339 and water right claim #_____. (to be filed in Feb^{March}, 1971)

Harry Povey, Attorney
115 Second Street West
Twin Falls, Idaho

Dear Mr. Povey:

The water being diverted by the Idaho Springs Trout Farm from Billingsly Creek at Eagerman, Idaho was measured on July 12, 1966.

The volume of water was computed as follows:
North Pond - 106 c.f.s. measured by
current meter and cross-section method
South Pond - 14 c.f.s. measured by sub-
merged weir method

The total water being diverted is 120 c.f.s.

If you should need a signature or statement on any documents, please contact this office.

We thank you for the opportunity to be of service.

Sincerely,

Raymond J. Brassart

BILLINGSLEY CREEK DIVERSION

POND DESCRIPTION

The first diversion of water from Billingsley Creek by Idaho Springs Trout Farm took place on December 1, 1965. The diversion has been made continuously since this time. The water is used as follows:

1. Southwest Lake.

This unit is 300 feet by 50 feet and averages three feet in depth providing 45,000 cubic feet of volume. The pond has been operated successfully by utilizing 15 to 20 cubic feet per second and 1.3 to 1.6 water exchanges per hour. It holds a maximum of 50,000 pounds of fish.

2. West Lake.

This unit is 330 feet by 140 feet and averages three feet in depth providing 138,600 cubic feet of volume. The pond has been operated using 20 to 55 cubic feet per second depending on the time of year and fish density. Water exchange rate varies from less than 1 to 1.4 per hour. The unit has held a maximum of 120,000 pounds of trout.

3. East Lake.

This unit is 300 feet by 140 feet and averages three feet in depth providing 126,000 cubic feet in volume. The pond has been operated with 15 to 45 cubic feet per second depending on varying factors. Water exchange rate varies from less than 1 to 1.3 per hour. This unit holds a maximum of 110,000 pounds of fish.

WATER REQUIREMENTS AND TROUT PRODUCTION

The three units described utilize 50 to 120 cubic feet per second of Billingsley Creek water. Water requirements vary widely in these units due to fluctuating water temperatures and varying water quality (turbidity from upstream activity). Since water temperatures may approach 70° F., adequate oxygen content must be maintained by providing a relatively high volume of flow. Water chemistry has been periodically sampled to ensure adequate conditions for trout rearing. Production of trout has averaged 350,000 pounds per year since 1966.

COUNTY OF ADA)

JACK E. KELLY being first duly sworn on his oath, deposes and says:

I am a registered professional engineer residing in Boise, Idaho. I am a partner in the consulting engineering firm of Anderson & Kelly which specializes in water resource work.

I have personally visited the Idaho Springs Trout Farm adjacent to Billingsley Creek located in Sec. 19, T.7S., R.14E. B.M. in Gooding County, Idaho. I have personally observed the diversion of a portion of Billingsley Creek into the Idaho Springs Trout Farm facilities on several occasions in 1969 and 1970. The water being used was in constructed channels that the Owner refers to as Southwest Lake, West Lake and East Lake. I observed the use of the diverted water for fish propagation during my visits to the property.

On December 10, 1970 I measured the diversion into Southwest Lake with a current meter at 10.7 cubic feet per second (cfs). On December 10, 1970 I measured the diversion into West Lake and East Lake by the submerged weir method at 112 cfs. On January 6, 1971 I measured the diversion into West Lake and East Lake together with Mr. Keith E. Anderson, a registered professional engineer, and my partner. We measured the discharge with a current meter and obtained a measurement of 111.3 cfs. The combined diversion on December 10, 1970 was 122.7 cfs.

I have analyzed spring flow records for other springs in the vicinity and have observed a seasonal fluctuation as evidenced by these records. It is my opinion that Billingsley Creek, which is derived from spring flow, will have a higher flow in August or September and that diversions into the Idaho Springs Trout Farm may be higher during these months.

Gentlemen:

The Department of Water Administration has completed the processing of your claim to a water right, and no further action is authorized under Sections 42-225a and 42-225b, Idaho Code. Your claim will be retained in our files and will be available at any time for use by you or the court.

As you are aware, the filing of your claim does not, in itself, guarantee you a water right; it only records and preserves the information and the evidence which you included in your claim.

If, at a later date, you find that you have additional information or supporting evidence that you would like to have included in your claim file, you may have that information or evidence added at any time. Please refer to your claim number when corresponding with this office.

We are enclosing, for your records, a copy of your claim. If you have any questions, or if we can be of further assistance, please feel free to call upon us.

Very truly yours,

Donald W. McBldowney
Appropriation Supervisor
