1. amerritt 11/24/2004 Field Report Narrative

Comment: The field exam was conducted on 8/19/04. Corbin Knowles assisted. We met Adam York at the Magic Valley Speedway and he showed us the well and described the water uses at the race track. The permit includes irrigation however the grounds are irrigated from a pump in the Twin Falls Canal Co. just north of the facility. The well is not used for irrigation. Inspection of the well, power panels and pressure tanks found no information about the well. The distribution line from the well is buried. After the exam I contacted Arnold Elsing and he indicated that the well had a 3 H.P. submersible pump which was set 252 feet below ground.

Mr. York explained that the facility had a seating capacity of 3000 people. He indicated that normally 1200 to 1500 people attend the weekly Saturday race. (Only one race per week is held.) This reported number of people includes pit crews, drivers, fans, and employees.

Water uses include water for the restroom facilities, water for the concession stand, water used in the pits for vehicle maintenance and water used for washing down the bleachers after each race.

2. kwalker 12/1/2004 License Review

Comment: Permit developed for commercial use only. No irrigation from this well. Recommend license as proposed by region.
