Re: River Grove water right transfers
Project No. 267-02-2002

Dear Jim:

I spoke with Mr. Sturdivant today and have the following responses to the three questions you raised in our meeting yesterday:

1. Do not place a limit on the flow rate that may be taken from the Idaho Power ditch under all water rights. If additional flow over the current water right amount of 0.61 cfs is desired, the water will be called for and the watermaster will divert more from into the ditch. Idaho Power's downstream flow in the ditch will not be impacted.
2. For the 0.58 cfs of irrigation under 36-106 being transferred to the Billingsley diversion, keep the same proportions of subordinated and unsubordinated as on the original right, i.e. 75% / 25%. This would mean that of the 0.58 cfs moved, 0.43 cfs would be subordinated and 0.15 cfs would be unsubordinated.
3. At the Barlogi ditch pump station, you indicated that 2.0 cfs – 0.58 cfs – 0.24 (conveyance loss) = 1.18 cfs would be available. Of this amount, the applicant wishes to keep 0.80 cfs for irrigation and transfer 0.40 cfs to aesthetic use at the Billingsley diversion.

Please let me know if I need to come in and make changes to applications to effect these clarifications.

Sincerely,

Charles G. Brockway, P.E.
