RE: Proposed transfer

It should be noted that right ^A45-4169 is an EXPANSION claim (42-1416B) of right 43-2322. No flow rate or volume accrues to the right.

I concur that the 10 ac tract descriptor appears to be incorrect on the SRBA recommendations. The Quad map shows the well a little further south than the NAPP photography indicates. Perhaps the Quad map was used to determine location.

I believe reference to the Raft River sourced rights should be included in the transfer order. For example: "Applicant shall not transfer rights X, Y and/or Z away from this property in order to continue diversions from the wells under these rights". This is proposed so that Raft River use could be resumed in the future in the event that GW rights are curtailed.
