1. jstanton 8/23/2004 Comment/Analysis

Comment: This application was filed and paid for by Rodney Hall, who is helping the elderly Mr. Nye in this matter. Hall farms the property, and told me that the two existing wells pump about 960 gpm. The filing fee is based on the difference between the decreed flow rate and the present system capacity, about 3.56 cfs. Hall does not expect to get this much, but wants to try for it anyway. This appears to be a simple pod transfer that can be approved with standard conditions. I do not plan to do any field work unless additional data is needed.

Authority To File: The applicants are the owners of record, so this is not an issue.

Water Right Validity: The right was recently decree, so this is not an issue.

Injury To Other Rights: No issues identified.

Enlargement of Use: None requested.

Local Public Interest: No issues identified.

Beneficial Use/Conservation of Water Resources: No issues identified.

Review of the application finds that there is no clear inconsistency with criteria set forth in Sec. 42-222 I. C. preventing processing. At least prior to advertising, no other issues have been identified that would require further review or submittal of additional data by the applicant.

4. jstanton 9/13/2004 Legal Notice Remarks

Comment: This application proposes to add a third well to the two existing wells in

Comment: This application proposes to add a third well to the two existing wells in order to get the pumping capacity back up to what is allowed under this water right. Due to sand problems, the existing wells are pumping much less than what is allowed. The new well will be drilled a little south of the east well in the system for ease in co-mingling with Cassia Creek water also appurtenant to this farm. The new well will be located 1 3/8 miles south and 1/4 mile east of the Hwy. 77/81 interchange at Malta.
