# MEMORANDUM

**Date:** August 31, 2004

**To:** Water Right File 37-21339

**From:** jroberts

**Re:** Comment/Analysis

---

I visited the property on 8/27/04 and met with the applicant, Peter Bowler. He showed me a small stream running along the eastern edge of the parcel that emptied into the Snake River. It appeared to emerge from a spring in the hillside below the road into his property. The area was very overgrown, however, so I was not able to verify this at the time. Mr. Bowler gave me some pictures he had recently taken and said he had made a measurement of 0.13 cfs, capturing most of the flow, and this was the amount he had applied for. He intends to build a small collection box and develop this spring for domestic and aesthetic use.

head of spring is right below base of tree
