**Subject:** Arbor Ridge Transfer

Hello Terry,

I have made my initial review of the transfer application for Arbor Ridge, and I have the following questions.

1.) Are the points of diversion described in this application the same as the points of diversion for water right 63-31745?

2.) The map of the irrigation use is not really clear. Could you send a map that shows exactly what will be irrigated by the two acres? We have to draw ArcView shapes limited to the number of acres, so we need a pretty detailed map. Listing acres in a 40-acre tract doesn't work any longer.

3.) In the Northeast corner of the map showing the landscaping the applicant's are showing a lagoon location. I drive by this area every day on my way to work and it looks as though this lagoon has been built. Do they plan to fill it with water? If so, they will need storage water.

4.) The map showing the lands to be removed shows all of the lands listed under 63-9972. We need to know where the 2 acres will be retired within that water right. This is similar to what you did with the Post water rights.

I hate to send you these things on a Friday, but it is just the way they worked out. Let me know if I can give you any further help or work through some of my questions.

Thank you for your time.

1. Yes. The irrigation water will be diverted through the same wells as 63-31745.
2. I will send you an ArcView shape of the 2 acres later today.
3. I understand that the lagoon is a wastewater lagoon. The applicant does not intend to fill directly from the well. The lagoon will be part of the wastewater treatment system, and will store water at times when DEQ does not allow wastewater land application. Therefore, we are under the impression that we do not need a water right (see Administrator's Memorandum No. 67 dated 2/28/03 regarding permitting requirements for ponds.)
4. A map of the 2 acres is attached.
