Permit No. 32357

Holder: Lafe Cox

NW1/4SW1/4, Sec. 32, T. 18 N, R. 8 E, B.M. -- Cox Creek

USE: Stockwater, irrigation for pasture and hay land, domestic for cabins, 4 each. Stream flow at maximum = 30 miners inches or 0.60 c.f.s. All of the streamflow is diverted over the land by means of dirt and canvas diversion dams. Domestic water is both carried into the cabins and also piped from up stream by 1 inch galvanized pipe. Allow 0.60 c.f.s. 0.59 c.f.s. for irrigation and 0.01 c.f.s. for domestic use.

NW1/4SW1/4, Sec. 32, T. 18 N, R. 8 E, B.M. -- Sawmill Creek

USE: Stockwater, irrigation for pasture and hay land. Stream flow at maximum = 15 miners inches or 0.30 c.f.s. All of the streamflow is diverted over the land by means of dirt and canvas diversion dams. Allow 0.30 c.f.s. = 15 miners inches.

NE1/4SW1/4, Sec. 32, T. 18 N, R. 8 E, B.M. -- Moose Creek

USE: Stockwater, and irrigation of pasture and hay land. Part of the stream of Moose Creek is diverted by means of a rock, dirt and wood diversion dam with about a 4-1/2 foot crest and about 3 feet high. The water is carried by flume across Johnson Creek to the fields below Mr. Cox's Lodge. Streamflow was measured on the carbridge and in the flume over a rectangular weir crest of 1 foot head = approximately 4 inches or 3-15/16 inches = 0.33 = 0.606 c.f.s. This measurement was taken at a poor time of the year and was a difficult measurement to obtain. The work was done over an improvised weir. Allow 0.61 c.f.s.

SE1/4NW1/4, Sec. 32, T. 18 N, R. 8 E, B.M. -- unnamed stream *Elm Creek*

This stream irrigates approximately 3 acres of pasture on the east side of Johnson Creek and also serves as stock water. At the time of the examination, this stream was producing very little water, however, high water marks and the fall of this creek indicate the stream does produce about 6.5 inches or 0.13 c.f.s. Allow 0.06 c.f.s. or 3 miners inches.

NE1/4NW1/4, Sec. 32, T. 18 N, R. 8 E, B.M. -- unnamed stream

This stream flood irrigates approximately 10 acres on the east side of Johnson Creek, also providing stock water. Water is diverted from the main channel of this unnamed stream by a hand dug crude ditch. This crude ditch conveys approximately 10 miners inches in the first part of the ditch, however, loss of the ditch would allow about 5 to 7 miners inches to reach the 10 acres. Allow 0.13 c.f.s. or 6.5 miners inches.

SE1/4NE1/4, Sec. 31, T. 18 N, R. 8 E, B.M. -- Fostrum Creek

USE: Stock water and pasture irrigation. This stream flows through the

32357

Permit No. 32357 (cont.)

pasture and is forced to flood pasture land by use of canvas and dirt dams. The average streamflow is about 0.20 c.f.s. or 10 miners inches. Allow 0.20 c.f.s. or 10 miners inches.

Gentlemen;

In view of the errors occurred in submitting the depositions for Permit numbers 32357 and 32358; we wish to advise you the only reason the depositions were taken on dates other than advertised was that the witnesses were not able to appear at that time.

This is due to our remote location. We hope that this explanation will be satisfactory.

Very Sincerely,

Lafe Cox

Dear Mr. Cox:

We acknowledge receipt of the depositions of holder and two witnesses, also affidavit of publication in the **Camada News** all submitted in proof of completion of works and beneficial use on Permit No. ~~**32357, 32358**~~.

Before final action is taken in the matter, the law requires that a field examination be made by an engineer from this department.

We cannot tell just when this examination will be made, but our field engineer will try to contact you at the time he makes the examination so that arrangements may be made to show him over the grounds.

Very truly yours,

Dear Mr. Bosch;

Your letter finally caught up to us since we were in the moving process from Emmett to Yellow Pine. Sorry for the delay.

I am enclosing the map showing the water lines in the north forties.

Keepe Creek and Bon Creek should each be 1 cubic foot of water. The sawmill creek will hold .2 of a cubic foot. Forstrum Creek, the unnamed creek, Unqua Creek and another unnamed creek will each hold $\frac{1}{2}$ of a cubic foot of water.

I hope this answers your questions for you and thank you for your assistance.

Re: Permit No. 32357 and 32358

Mr. Lyle Cox,
Cascade, Idaho.

Dear Mr. Cox:

We enclose Permit No. 32358 in which we direct your attention to the limitations and conditions as given on the fourth page under approval of the State Reclamation Engineer.

We also enclose Departmental Receipt No. 32767 which was issued covering payment in the amount of \$11.50 for the filing fee of the above mentioned permit.

Very truly yours,

Dear Mr. Cox:

Enclosed herewith is our copy of the map for the above numbered permit.

According to the permit you plan to irrigate the 4 quarter sections within the heavy black lines. However, when you were in the office I forgot to ask where the ditches were located and how you get the water to the 2 north 40's. Would you please show the ditches on the map and the amount of water you plan to get from each point of diversion. Your permit says that 1 cubic foot will come from Moose Creek and the remaining 2.2 cubic feet to come from the other 5 streams but not the amount from each stream.

Please make the necessary corrections on the map and return to this office.

Thanking you in advance.

Very truly yours,

CARL F. TAPPAN
State Reclamation Engineer
