Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (CG) and the experimental group (EG). The CG was subjected to a standard training protocol, while the EG was subjected to a modified training protocol. The EG was divided into two subgroups: the EG1 subgroup and the EG2 subgroup. The EG1 subgroup was subjected to a modified training protocol, while the EG2 subgroup was subjected to a standard training protocol. The subjects were subjected to a series of tests: a pre-test, a post-test, and a follow-up test. The pre-test was conducted before the training, the post-test was conducted after the training, and the follow-up test was conducted after a period of time. The results of the tests were compared between the CG and the EG, and between the EG1 and EG2 subgroups.

Figure 1. Schematic representation of the experimental design. The figure shows the sequence of events for each trial. The participant is first presented with a target stimulus (a red dot) and a starting position (a black dot). The participant then moves the hand to the starting position and the hand is released. The hand moves towards the target and the participant is required to stop the hand at the target position. The time taken for the hand to reach the target is recorded. The trial is repeated for different target distances and starting positions.
