Remarks.

Three Reservoirs are to be constructed to store the surface waters and waters of springs near the same, said springs naturally discharging into the said reservoirs; Reservoir No. 1 is formed by constructing a dam 7 ft. high, 30 ft. long on bottom and 200 ft. long on top, forming a reservoir of 75 acre ft. capacity. Said Reservoir No. 1 is located in the SW $\frac{1}{4}$ SW $\frac{1}{4}$, SE $\frac{1}{4}$ SW $\frac{1}{4}$ and NE $\frac{1}{4}$ SW $\frac{1}{4}$ of Sec. 14.

Reservoir No. 2 is formed by constructing a dam 5 ft. high, 50 ft. long on bottom and 200 ft. long on top, forming a reservoir of 11 acre ft. capacity. Said Reservoir No. 2 is located in the NW $\frac{1}{4}$ SE $\frac{1}{4}$ of Sec. 14, and is fed from springs tributary to Billy Creek.

Reservoir No. 3 is formed by constructing a dam 5 ft. high, 90 ft. long on bottom and 250 feet long on top, forming a reservoir of 9 acre ft. capacity. Said Reservoir No. 3 is located in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of Sec. 14, and is fed from a ditch diverted from a water course in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of said Sec. 14, near the northwest corner thereof. Said ditch is 1.5 ft. wide at bottom, 2 ft. wide at water line and 0.5 ft. deep, having a capacity of 1.5 sec. ft. and the grade follows the bed of a natural water course with a grade of 50 ft. per mile a distance of 0.2 mile. The purpose of said ditch is to store any surplus waters from said Billy Creek which can not be stored in Reservoir No. 1 or No. 2, in said Reservoir No. 3, and to return the same to the bed of said Billy Creek through a natural water course at a point in the SE $\frac{1}{4}$ SE $\frac{1}{4}$ of said Sec. 14.

A diversion to a ditch as hereinabove described, in the NW $\frac{1}{4}$ NW $\frac{1}{4}$ of said Sec. 24 is to be used to conduct the water to a portion of the land above described and further diversions are to be made directly upon the land with the boundaries thereof from the natural stream bed of Billy Creek, such diversions amounting to 2.5 sec. ft. by the aforesaid ditch and 2.5 sec. ft. from the natural channel within the boundaries of the land proposed to irrigate.

The average low water flow of Billy Creek is not in excess of one cubic foot per second and the aforesaid reservoirs are to be constructed to store and surplus or high water or the water from the springs which are tributary to the same and tributary to Billy Creek and thereby increase the natural low water flow of said Billy Creek.

Dear Sir:--

On the 12th inst. we received fees from you in the sum of \$22.00, for beneficial use of water under Permit 9132, receipt for which has been duly issued and license will be mailed to you within the next few weeks.

On the same date that we wrote you for fees for this proof, we wrote for fees under your Permit 9134 but no reply has yet been received. As the same lands are included under each permit, I take it you intended the \$22.00 fees to cover both. If such is the case, I would say that each permit is separate and distinct from every other permit and the fees are required under each permit the same as the the lands were not included in both. Please advise us as to what you intend to do regarding proof under Permit 9134, for which \$12.00 was requested.

Dear Sir:

I enclose herewith blank affidavit to be filled out, sworn to by you before a Notary Public or a Justice of the Peace, and returned to this office on or before the above date, or within ten days thereafter, for the purpose of making proof of completion under the permit. Upon receipt of this affidavit in this office, provided the same satisfactorily shows the completion of the works substantially in accordance with the terms of the permit, together with a fee of \$5.00, a Certificate of Completion will be issued to you.
