ACTION OF THE DIRECTOR, DEPARTMENT OF WATER RESOURCES

This is to certify that I have examined Application for Permit to appropriate the public waters of the State of Idaho No. 22-7490, and said application is hereby APPROVED.

1. Approval of said application is subject to the following limitations and conditions:

   a. SUBJECT TO ALL PRIOR WATER RIGHTS.

   b. Proof of construction of works and application of water to beneficial use shall be submitted on or before February 1, 1990.

   c. The rate of diversion, if water is to be used for irrigation under this permit, when combined with all other water rights for the same land shall not exceed 0.02 cubic feet per second for each acre of land.

   d. Other: A measuring device and lockable controlling works of a type acceptable to the Department shall be permanently installed and maintained as part of the diverting works prior to diversion of water under this permit.

   The issuance of this permit in no way grants any right-of-way or easement across the land of another.

   No water may be diverted under this permit until adequate supplemental water is obtained for the irrigation season when the natural flow is not available.

   Use of water under this permit is subject to control by the watermaster of State Water District No. 01, Snake River.

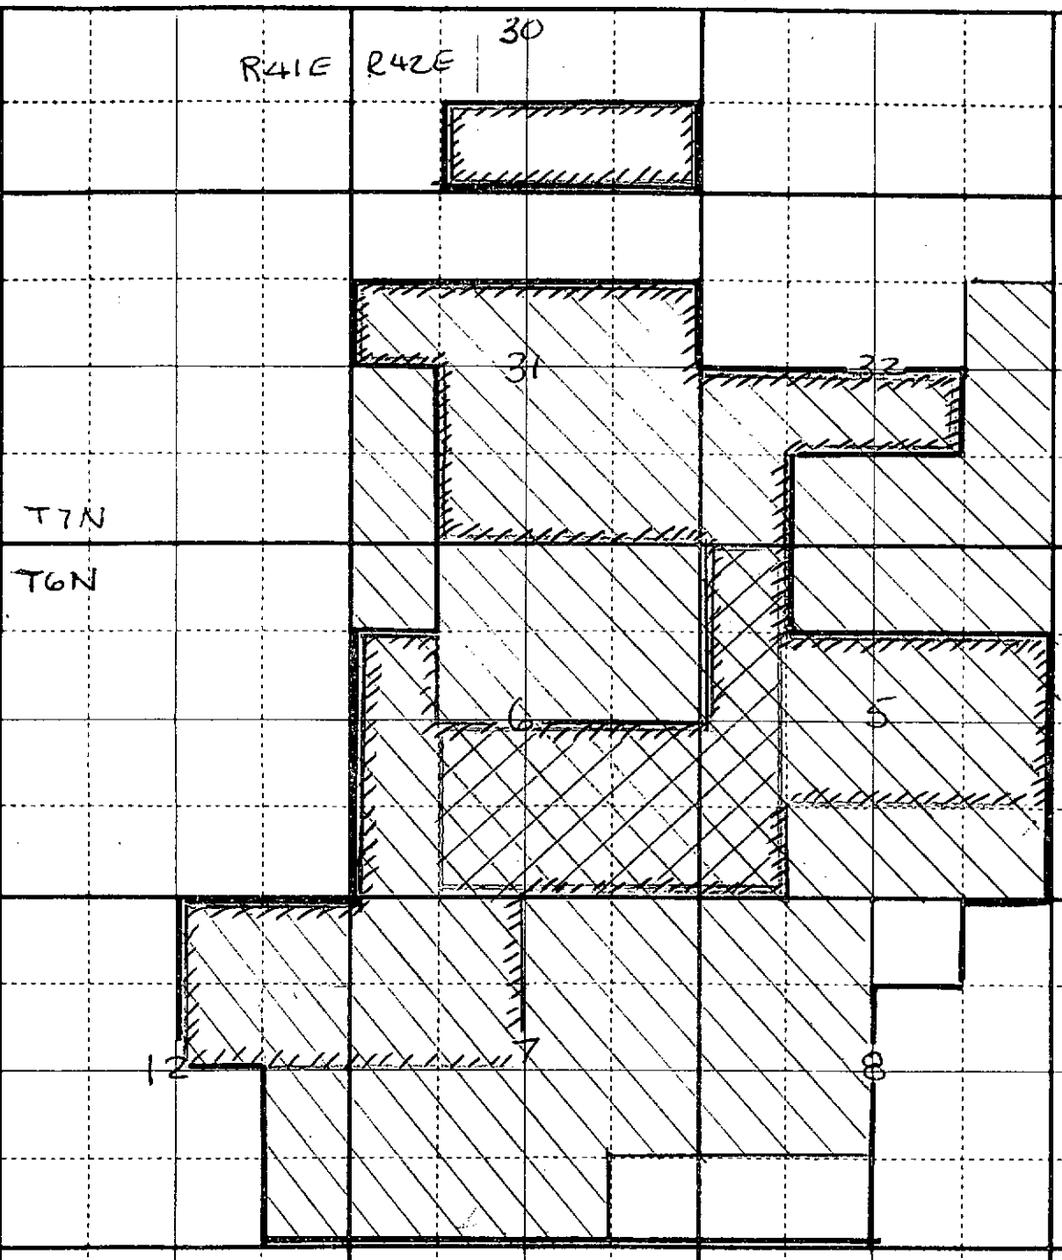

Witness my hand this 10TH day of JANUARY, 1989.

MEMORANDUM

To: File 22-7490

From: L. Glen Saxton LGS

RE: ANALYSIS OF FILE

Date: January 5, 1989

The above referenced application has been held without action together with all the other applications in the general Swan Falls impact area until more was determined relative to a resolution of the Swan Falls controversy.

The application was primarily filed for the purpose of providing a record of this surface water diversion for administrative use in water distribution by the Water District 01 watermaster. When natural flow is not available for this right, the amount diverted is charged by the watermaster against storage which is required as a condition of permit approval.

The application has been advertised and has not been protested. The application meets the criteria of Section 42-203A, Idaho Code. The permit is not subject to the criteria of Section 42-203C, Idaho Code, since the diversion is upstream of Milner Dam and trust water is not involved.

MICROFILMED

MAY 09 1989

MEMORANDUM

DATE: June 23, 1988

TO: FILE 22-7490

FROM: RON

Application for permit No. 22-7490 has been held in our files since April 10, 1985 because of the Swan Falls issue. While it was probably appropriate to hold this application during the time the Swan Falls Agreement was being formulated, it is my opinion that applications for permit for surface water sources within Snake River Water District 1 have no relationship to the IPCO rights at Swan Falls. The Department's decision to not process surface water applications is, in fact, contrary to the Department' previous policy of improving water user compliance with and awareness of state water law. The watermaster has also taken the position that stored water in federal reservoirs is intended to supplement available natural flow supplies and, therefore, those using storage must first obtain a natural flow right. In the past this has worked very well. Anyone who wanted to put a pump in the river had to have either a decreed, licensed, or permitted water right. The granting of permits was dependent upon the applicant making a showing that he had adequate supplemental supplies for the beneficial purposes described on the application. The watermaster then had an accurate description of the point of diversion, place of use, and storage to be assigned. The information on the permit could then be field checked and added to the watermaster's accounting program.

Since the Swan Falls hold up, permits have not been granted and this control on new installations has been lost. Now the watermaster does not have the lever to require permits and new installations are more likely to go in and not be properly regulated and accounted for. This is in part due to limitations in the water right allocation and accounting system. Perhaps it would be helpful to explain through an example. Let's consider three diversions A, B & C as defined below.

DIVERSION	WATER RIGHTS
A	1981 PERMIT + 50 AF STORAGE
B	1985 APPLICATION + 50 AF STORAGE
C	50 AF STORAGE

RECEIVED MAY 09 1989

The watermaster's allocation process considers that as long as the natural flow is adequate to fill all rights of record (which is normally the situation that exists when water is passing Milner Dam) water will be allocated to the 1981 permitted right of diversion A. Diversion B and C will be charged storage for all water diverted.

However, since no storage is actually being drafted during this period, the watermaster will have to go back and restore the amount of storage used by B & C on the day that the actual draft of storage starts. Thus, the amount of natural flow available to A, B & C is exactly the same! The difference is that the watermaster must go to the extra work of making the storage adjustments for B & C and has no legally established process for defining the point of diversion, place of use, or ownership of B or C. Without the permitting process available, the threat of shutting off B or C for not having the requisite permits would ultimately be counter-productive.

The installation represented in application 22-7490 has been in place since 1978. This application is an attempt by the applicants to comply with my requirement that every diversion on the river be reflected by a permit, license or decree. I see no reason why surface water permits should be delayed where such diversions are subject to watermaster control.

RE: Application for Permit No. 22-7490
CANYON CREEK LATERAL DITCH WATER USERS ASSOC.

Mr. Leigh Chantrill
Newdale,
Idaho 83436

Dear Mr. Chantrill:

This office will not be able to forward the above application to Boise as intended and conveyed to you in April. We were basing our intentions on the adoption and implementation of new rules and regulations for processing applications, which was scheduled to occur on April 28, 1986.

This change in our position is a response to action taken by Idaho Power Company on April 28th. They filed a suit against implementation of the Department's newly adopted rules and regulations.

Further administrative action on the application will now be deferred until the suit has been settled and the adopted rules and regulations implemented.

Respectfully submitted,

ERNEST CARLSEN
Assistant Regional Supervisor

13055000 TETON RIVER NEAR ST. ANTHONY, ID

LOCATION.--Lat 43°55'38", long 111°36'55", in SW¼SW¼ sec.15, T.7 N., R.41 E., Fremont County, Hydrologic Unit 17040204, on right bank 0.5 mi (0.8 km) upstream from railroad bridge, 4 mi (6.4 km) southeast of St. Anthony, and at mile 22 (35.4 km).

DRAINAGE AREA.--890 mi^2 (2,305 km^2), approximately.

PERIOD OF RECORD.--January 1890 to September 1893, April 1903 to June 1909, April 1920 (irrigation seasons only 1920-21, 1923-33) to May 1976 (destroyed by flood of June 5, 1976), October 1977 to current year. Monthly discharge only for some periods, published in WSP 1317. Published as "near Wilford" or "at Chases Ranch" 1890-93.

REVISED RECORDS.--WSP 1217: Drainage area. WSP 1347: 1903-6, 1908-9. WRD ID-80-1: 79.

GAGE.--Water-stage recorder. Altitude of gage is 4,970 ft (1,515 m), from topographic map. Apr. 5, 1890, to Sept. 30, 1893, nonrecording gage at site 1 mi (1.6 km) downstream at different datum. Apr. 23, 1903, to June 30, 1909, nonrecording gage at site 0.8 mi (1.3 km) upstream at different datum. Apr. 19, 1920, to May 1, 1921, nonrecording gage and May 2, 1921, to Nov. 5, 1933, water-stage recorder, at site 400 ft (12.0 m) downstream at different datum. Nov. 6, 1933, to June 5, 1976, water-stage recorder, at approximately same site at different datum.

REMARKS.--Records good. Diversions above station for irrigation of about 58,000 acres (23,000 hm^2) of which about 4,400 acres (1,800 hm^2) are by withdrawals from ground water (1966 determination). Water is diverted at times (since 1939) during irrigation season from Henrys Fork through Cross Cut Canal to Teton River 0.8 mi (1.3 km) upstream from station, 53,200 acre-ft (65.6 hm^3) diverted into river during 1981 irrigation season.

AVERAGE DISCHARGE.--47 years (1933-75, 1978-82), 813 ft^3/s (23.02 m^3/s), 589,000 acre-ft/yr (726 hm^3/yr).

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge, about 1,700,000 ft^3/s (48,100 m^3/s), estimated from the average of slope-area measurements of peak flow at Teton, 5.3 mi (8.5 km) downstream and near Newdale, 3.4 mi (5.5 km) upstream, June 5, 1976 (Teton Dam failure); maximum stage, 42.2 ft (12.86 m); maximum discharge excluding 1976, 11,000 ft^3/s (312 m^3/s) Feb. 12, 1962, gage height, 9.36 ft (2.853 m), on basis of contracted-opening measurement of peak flow, site and datum then in use; minimum, 183 ft^3/s (5.18 m^3/s) Oct. 4, 1975, due to filling of Teton Reservoir.

EXTREMES FOR CURRENT YEAR.--Maximum discharge, 4,240 ft^3/s (120 m^3/s) June 26, gage height, 6.32 ft (1.926 m); minimum, 227 ft^3/s (6.43 m^3/s) Jan. 19, minimum gage height 2.49 ft (0.759 m) Jan. 19, but may have been less during period of ice effect Jan. 31 to Feb. 14.

Dear Ron:

The Canyon Creek Lateral Water Users Association has asked that I provide information to you concerning the pumps installed for them below the Teton Dam and the lands irrigated from these pumps and booster pumps adjacent to their properties.

We entered into contracts on April 12, 1977 to provide the river pumps and mainline, from the river to the various land owners as follows:

	No.	H.P.	6 P M	Head
	1	600	5,000	405'
	4	200	6,600	405'
	1	100	825	405'
Totals	6	1500 H.P.	12,425 GPM	405'

In June of 1981, the 100 H.P. pump listed above was replaced with a 250 H.P. pump which pumped 2050 GPM because the small pump was inefficent. Therefore the total pumping capcacity as of that date was 13,650 GPM or 30.33 cfs.

The lands irrigated totally or in part from these river pumps were and are the following:

Dear Mr. Klinger:

I have recently reviewed the application for permit for Teton River water your group has filed. It was stated that this water was put in use on the land described since June, 1978.

We can being advertising this application but we cannot complete the processing without adequate evidence to substantiate the use date of 1978. If this evidence is not submitted before June 30, 1985 then this application will be subject to the public interest criteria being developed for new applications. I suggest you call me on this and discuss it further.
