Dear Sir:

This letter is to provide certification of the rate of diversion for permit No. 22-7236 in the name of Ray S. Baker.

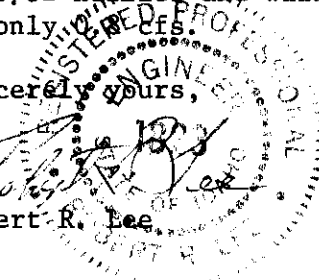

This fall the following observations were made of the sprinkler lines in operation:

- (1) 48 heads, 11/64 nozzles, 54 psi average
gpm/head = $6.4 \times 48 = 307$ gpm
- (2) 27 heads, 11/64 nozzles, 59 psi average
gpm/head = $6.7 \times 27 = 181$ gpm
- (3) Total used 488 gpm = 1.08 cfs

Mr. Bakers' water permit is for 0.8 cfs and he says that is adequate. He plans to install 5/32 nozzles and will reduce the pressure to 50 psi so he will use only 0.8 cfs.

Sincerely yours,

Robert R. Lee

Dear Bob:

I recently received your certified measurement for Ray S. Baker's permit number 22-7236. Your letter indicated that you intended to send me an enclosure or diagram of the system. However, this information was not included in the envelope.

I realize the system is very simple and I feel that perhaps a diagram is not really necessary. However, as I'm returning the measurement to you for verification of your status as a professional engineer, I would greatly appreciate it if you could include the missing diagram. Please place your seal on the measurement and return it to me. Thank you very much for your assistance.

SUBJECT: Availability of ground water in the Teton-Rexburg area

According to the data available in the Eastern District office, the Ground-Water Levels and Well Records for Current Observation Wells in Idaho and well logs, there has not been a drop in the water tables in the Teton-Rexburg area. There have been two wells drilled in Section 26, T. 7N, R. 41E. The difference in elevation of the static water level between the two wells is 22 feet. There is apparently enough water to fill the applications.
