Subject: RE: Transfer 71010

License 37-2147 covered lands that were not part of the decreed place of use. The present place of use includes about 30 acres in tracts not decreed. The decreed place of use involves about 227 presently-irrigated acres, and it appears conceivable that the acres could have been irrigated at the time of decree (i.e. there may have been enlargement within decreed place of use, but no available documentation supporting enlargement). It then must be assumed that licensed acres were shifted over time from NWNE S27 to SESW S26 and other places and are construed to be an accomplished transfer.

That is where we came from on the transfer analysis. Thanks for the opportunity to contribute to the discussion.

Doug Jones

Subject: Transfer 71010

We received a petition for reconsideration for this transfer from Brockway (he has power of attorney). They are requesting acre-limits be increased for the two old decreed rights involved in the transfer. The transfer memo indicates that SRBA staff were consulted in the determination of the limits (transfer is based on SRBA claims). We need a recommendation from your region before we take action on this petition. I have added the petition to DOCS under the transfer number.

Thanks,
Jeff
