Subject: Amended Water Right Applications – Lochsa Falls, LLC

Dear Lori:

As described below, I have revised the Lochsa Falls LLC Application for Permit and Application for Transfer.

Both applications have been changed to show two diversion points within the SWNE of Section 26, rather than a single diversion point in the SWSE of Section 26. The new diversion points are located on Lochsa Falls lands, rather than on an adjacent landowner's property.

The diversion rate on the Application for Permit has been increased from 1.92 cfs to 2.20 cfs to reflect an actual lot count of 686 lots and an irrigated area of 7,000 square feet per lot. The previous application listed 700 lots at 6,000 square feet per acre. However, in speaking with their irrigation designer, I understand that they have been using 7,000 square feet per lot for water use estimates associated with Settler's canal deliveries. Also, I have attached a listing of the residential lots. They total 686 lots, including 522 platted lots and 164 unplatted lots. A map is attached to the list. A check for \$40 is enclosed to reflect a filing fee increase from \$290 to \$330.

The diversion rates or irrigated acres on the transfer application have not been changed. However, the land associated with the portion of water right 63-11199 proposed for transfer was previously under contract. The land was recently purchased by Goldsmith (i.e., Lochsa Falls) and a warranty deed is attached.

Please contact me with any questions.

Sincerely,

Terry M. Scanlan, P.E.
