Department of Water Resources
Eastern Region

Mr. Wilson,

On January 16, 2004, I received a letter from you indicating that the ESPA analysis originally submitted with the Application for Transfer of Water Right for water rights 31-2322 and 31-11229 was in error due to the description of the point of diversion. I have amended my analysis using revised point of diversion descriptions (Row 37 Column 50 for the current P/D, and Row 36, Column 50 for the proposed P/D).

Enclosed is the revised analysis using the ESPA groundwater rights transfer spreadsheet.

If you have any questions concerning the analysis, please call me at (503) 231-2098.

Michael Eberle

Analysis

Transfer Application for 31-2322 and 31-11229
Using the

Background

The U.S. Fish and Wildlife Service (Service) is seeking to transfer two groundwater rights (31-2322 and 31-11299) located at the Camas National Wildlife Refuge (Refuge). In the Administrator's Memorandum dated October 30, 2002 addressing the transfer processing policies and procedures, it is stated that an application for transfer which proposes to move the point of diversion for a water right to divert and use groundwater from one location to another within the Eastern Snake Plain Aquifer (ESPA) must include an attachment that sets forth the time history of calculated depletions to reaches of the Snake River that are hydraulically connected to the ESPA using the department's current ground water model for the ESPA. Inasmuch as the Refuge's application meets the conditions set forth above, an analysis using the Eastern Snake Plain Aquifer Ground-Water Rights Transfer Spreadsheet Version 1.3 (Spreadsheet) was performed.

Running The Model

The Spreadsheet was run as described in the users' manual. Printouts showing the model input and resulting output are attached

The simulation start data was chosen to be the summer of 1953. This is in reference to the priority date of 31-2322 (5/9/1953). The location information used in the model (Row and Column) was determined using information provided by the Idaho Department of Water Resources. The current point of diversion is located in Row 37 and Column 50 and the proposed point of diversion will be located in Row 36 and Column 50. These location values were entered into spreadsheet cells B15, B16, C15, and C16. The response functions were then generated and brought into the spreadsheet.

Water use is modeled as occurring in the Spring and Summer of each year between the Summer of 1953 and Spring of 2103. Input consisted of using the full duty of 31-2322 (900 af/yr) between the start date and Summer of 1957, with 400 af being used in the Spring and the remaining 500 af being used in the Summer. 31-11299 has a priority date of 11/5/1957 with a duty of 875 af/yr. Beginning in the Spring of 1958 and continuing to 2103, the duty of 31-11299 was proportioned out to 475 af in the Spring and 400 af in the Summer and added to that of 31-2322, resulting in the modeled use of 875 af in the Spring and 900 af in the summer.

After the water use information had been entered, the effects of the requested transfer were calculated. The calculated effects are shown in the attached graphs and table.

Results

The results indicate a minimal affect may be caused by this transfer. Table 1, below, shows the modeled net transfer effect by reach. For the Ashton to Lewisville reach, the proposed transfer is expected to have a -5 AF/trimester net effect depletion by the year 2103 (the transfer will benefit this reach). To better understand the degree of impact caused by the proposed transfer, the net

transfer effect (net effect) can be divided by the total effect without transfer (no transfer effect) and multiplied by 100 to obtain the percentage of net effect to the no transfer effect. The -5 af/trimester net effect is approximately 1.86% of the 266.6 af/trimester no transfer effect. Similar calculations were done for the Shelley to Neeley, Neeley to Minidoka, and Milner to King Hill reaches and resulted in a 5.8 af/trimester, 0.3 af/trimester, and 0.4 af/trimester net effect or 2.20%, 2.27%, and 2.28% of the no transfer effect.

Table 1: Modeled Transfer Effects

Reach	Net Transfer Effect (AF/Trimester)	Net Transfer Effect to Total Effect Without Transfer (%)
Ashton to Lewisville	-5.0	1.86
Near Shelley to Neeley	5.8	2.20
Neeley to Minidoka	0.3	2.27
Milner to King Hill	0.4	2.28

Conclusion

Although the model indicates some additional impact to the Eastern Snake Plain aquifer may result from this transfer, the extent of impact is minimal. In the year 2103, the modeled negative impact to the ESPA from this transfer increased an average of just 2.25% when compared to the impact occurring without the transfer. Based on information provided by IDWR, a modeled impact of 5% or greater could result in denial of transfer or require mitigation to lessen impacts. Since the greatest impact modeled is 2.28 %, this transfer application should be approved.

Subject: Place of Use per your request

Keith, the Fax you sent did not copy well enough on my machine. I have attached a photo copy of a USGS topographic map with a line drawing of the small area within the SWNW of Section 15 T7N R36E that should be included in the proposed place of use for the proposed transfer of water rights 31-2322 and 31-11229. This should correspond to the legal description that we submitted with our Transfer Request that was submitted on September 3, 2003. I appreciate your diligence in finding and pointing out this discrepancy.

As we also discussed, the Proposed Place of Use is also partially covered by the wildlife water rights from 31-2363 and 31-11232. If you have any other questions don't hesitate to call me at 662-5423 or Michael Eberle at (503) 231-2098.

Office of the Attorney General
Washington, D.C.

July 8, 1941

Honorable Harold L. Ickes
Secretary of the Interior
Washington, D. C.

My dear Mr. Secretary:

I have examined the abstract of title, transcript of record and other related papers in the condemnation proceeding entitled United States of America v. Mary T. Smith, et al., No. 1116-E, in the District Court of the United States for the District of Idaho, concerning the acquisition of 296.10 acres of land in Jefferson County, Idaho, designated as Tracts Nos. 59, a, a-I, of the Camas Migratory Waterfowl Refuge Project.

The land is more fully described in the petition for condemnation which is included in the transcript of record.

From my examination I find that the condemnation proceeding has been regularly conducted and that on March 4, 1941, a preliminary order of condemnation was entered awarding \$10,000.00 as just compensation for the taking of said land.

✓ When the sum of \$10,000.00 is deposited into the Registry of the Court for the use and benefit of the parties entitled thereto, a valid fee simple title to said land will vest in the United States of America subject to existing public highways and public utility easements.

The transcript of record and other related papers are enclosed. The abstract of title will be forwarded at a later date.

Respectfully,

Francis Biddle
Acting Attorney General.

IN THE DISTRICT COURT OF THE UNITED STATES,
IN AND FOR THE DISTRICT OF IDAHO, EASTERN DIVISION

UNITED STATES OF AMERICA,

Plaintiff,

vs.

Analysis
of the
Transfer Application for 31-2322 and 31-11229
Using the
"Eastern Snake Plain Aquifer Ground-Water Rights Transfer Spreadsheet"

Background

The U.S. Fish and Wildlife Service is seeking to transfer two groundwater rights (31-2322 and 31-11299) located at the Camas National Wildlife Refuge (Refuge). In the Administrator's Memorandum dated October 30, 2002 addressing the transfer processing policies and procedures, it is stated that an application for transfer which proposes to move the point of diversion for a water right to divert and use groundwater from one location to another within the Eastern Snake Plain Aquifer (ESPA) must include an attachment that sets forth the time history of calculated depletions to reaches of the Snake River that are hydraulically connected to the ESPA using the department's current ground water model for the ESPA. Inasmuch as the Refuge's application meets the conditions set forth above, an analysis using the Eastern Snake Plain Aquifer Ground-Water Rights Transfer Spreadsheet Version 1.3 (Spreadsheet) was performed.

Running The Model

The Spreadsheet was run as described in the users' manual. Printouts showing the model input and resulting output are attached

The simulation start data was chosen to be the summer of 1953. This is in reference to the priority date of 31-2322 (5/9/1953). Using the grid map provided with the Spreadsheet, the point of diversions for the current and proposed place of use were both determine to be located in Row 36 and Column 50. These location values were entered into spreadsheet cells B15, B16, C15, and C16. The response functions were then generated and brought into the spreadsheet.

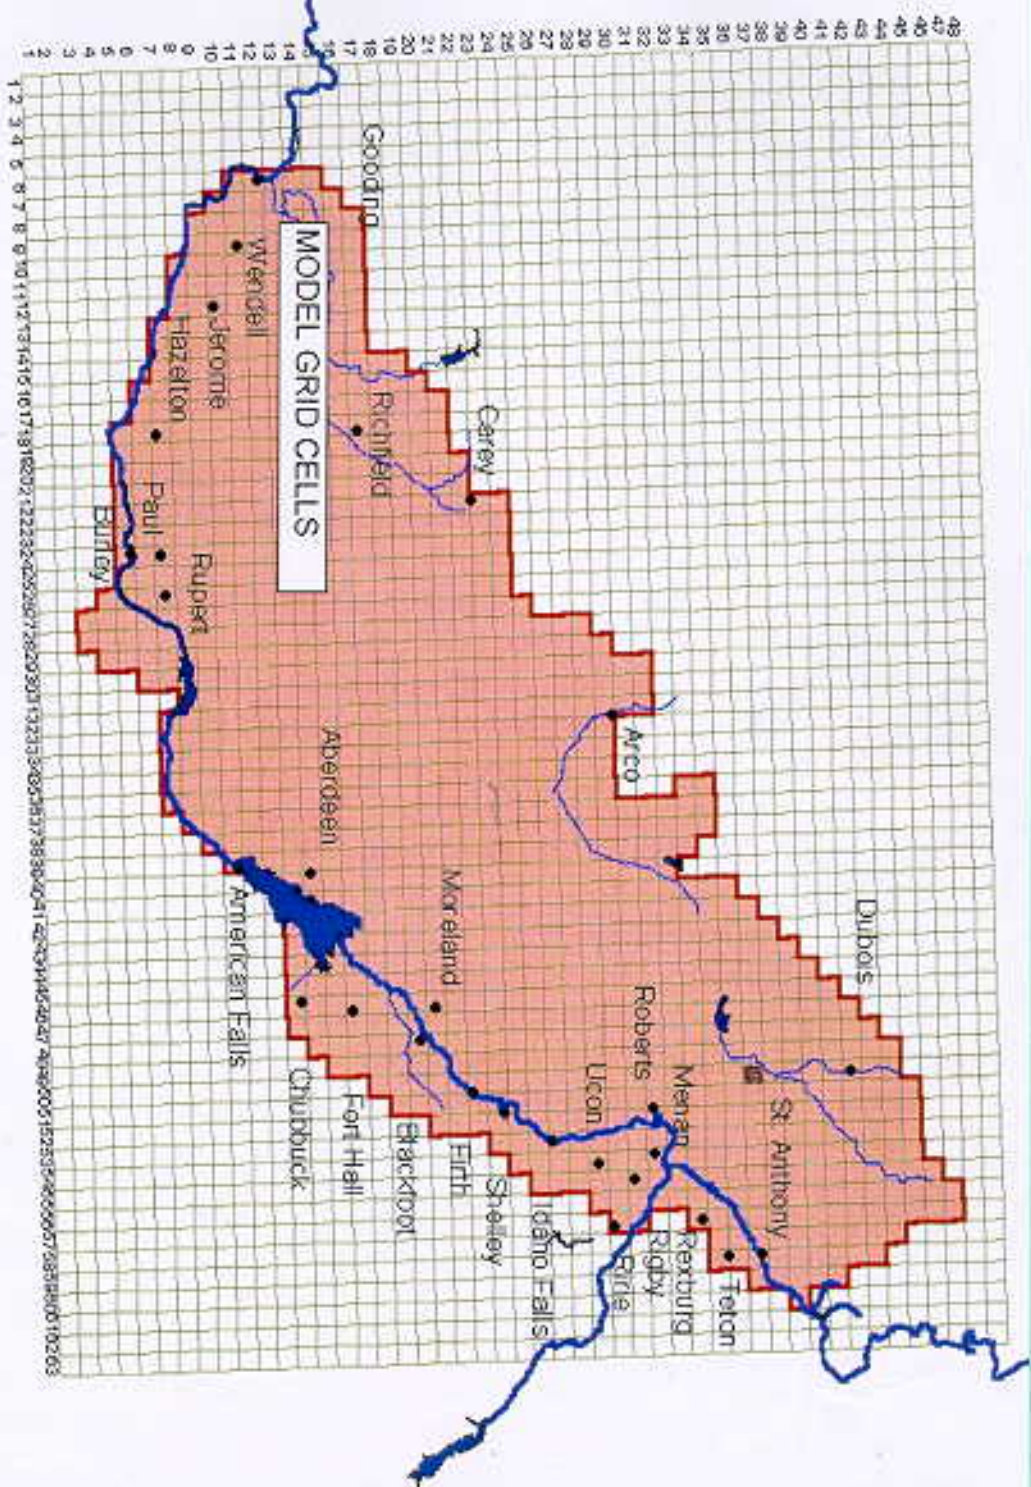

Water use is modeled as occurring in the Spring and Summer of each year between the Summer of 1953 and Spring of 2103. Input consisted of using the full duty of 31-2322 (900 af/yr) between the start date and Summer of 1957, with 400 af being used in the Spring and the remaining 500 af being used in the Summer. 31-11299 has a priority date of 11/5/1957 with a duty of 875 af/yr. Beginning in the Spring of 1958 and continuing to 2103, the duty of 31-11299 was proportioned out to 475 af in the Spring and 400 af in the Summer and added to that of 31-2322, resulting in the modeled use of 875 af in the Spring and 900 af in the summer.

After the water use information had been entered, the effects of the requested transfer were calculated. The calculated effects are shown in the attached graphs and table.

Results

The results clearly show that no additional effects will occur as a result of these transfer applications. Both the table and the graphs show identical modeled results for Total Effect With Transfer and Total Effect Without Transfer through the Spring of 2103.

These modeled results show that these Transfers will not increase depletions to hydraulically-connected reached of the Snake River and thus, will not cause injury to existing water rights.
