INTRODUCTION

The Boise Air Terminal is presently supplied with domestic water by the operation of a pumping system set up originally for Gowen Field during World War II to supply a population of approximately 10,000 personnel. This system operated satisfactorily during World War II with some standby reserve. After the base was deactivated, the system was maintained and used at a greatly reduced flow requirement.

Gradually during the last ten years the base has started to grow again. The old military facilities have been improved and the base is used as a National Guard Training Camp during the summer months. Also, the Boise Air Terminal area has been expanded for commercial and private aircraft operations. As these new water requirements have occurred, the existing system has been called upon to furnish the water. The system has been depreciating during these years to the extent that in the very near future the supply will become inadequate. With this in mind the City of Boise has retained the firm of Barton, Stoddard & Milhollin to review and analyze the water system and make recommendations and estimates for improvements.

HISTORY

Prior to World War II, the City of Boise began moving its airport facilities from its downtown location to the present site. During that time the well under the existing air terminal building was drilled. In 1941 the Corps of Engineers began building up Gowen Field as an air base. At this time Well No. 1, Well No. 2 and Pump Station No. 1 were installed. This system supplied the water requirement for the base until the population increased up to about 7,000 personnel. Early in 1943 Well No. 3, Well No. 4 and Pump Station No. 2 were installed. This gave the required water supply as the personnel increased up to about 10,000. The records indicate that the population fluctuated a great deal, with the average approaching around 6,000. After 1945 the water requirements of the base dropped to about 1/5 of the wartime use. This rate of use was probably about constant (there were no records kept during these years) from 1946 to 1952. In 1952 the Boise Air Terminal Area on the north side of the field was connected to the system by a 16" pipe line running from Pump Station No. 1 over to the terminal area and the well under the terminal building was taken out of service. This, in conjunction with the increased National Guard activity during the summer months, has increased the yearly flow up to about 1/2 of the wartime use, although during the summer training months the monthly demand is about 3/4 as high; and the maximum daily demand has increased up to the wartime rate. This increased demand has caused a gradual breakdown of the pumping system.

WATER RECORDS

In analyzing the water system, the first step was to collect and summarize the water records over the years. The existing records begin in 1942. At that time only Wells No. 1 and No. 2 were operating. Early in 1943 Wells

Re: Claim to a Water Right No. 63-4424

Boise Water Co.
P. O. Box 7488
Boise, ID 83707

Gentlemen:

The Department of Water Resources has completed the advertising of your claim to a water right, and no further action is authorized under Section 42-225a and 42-225b, Idaho Code. Your claim will be retained in our files and will be available at any time for use by you or the court.

The filing and advertising of the claim does not confirm the water right claimed, but will serve to record and preserve the information and the evidence which you included in your claim.

If, at a later date, you find that you have additional information or supporting evidence that you would like to have included with the claim, you may have that information or evidence added at any time. Please refer to the claim identification number when corresponding with this office.

We are enclosing a copy of your claim for your records. If you have questions, or if this office may be of further assistance, please feel free to contact us.

Sincerely,

L. GLEN SAXTON, P.E.
Western Regional Supervisor
