WHEREAS, the above numbered permit was approved with the condition that a measuring device of a type approved by the Department be permanently installed and maintained as part of the diverting works; and,

WHEREAS, on July 1, 1978, the Department adopted a new water measurement condition which states: "An access port or other device as specified by the Department shall be installed by the permit holder to provide for the installation of measuring equipment and the determination of the rate of diversion by the Department"; and,

WHEREAS, the former condition required the permit holder to purchase and install a measuring device or hire a professional engineer to certify the rate of diversion; and,

WHEREAS, the measuring device condition effective July 1, 1978, requires less capital expenditure by the permit holder; and,

WHEREAS, to be equitable to holders of permits issued prior to July 1, 1978, the new condition should be retroactive;

NOW THEREFORE, it is hereby ordered that the condition of approval of this permit related to water measurement is hereby changed as follows: "The permit holder shall either install a measuring device or provide a certified measurement by a professional engineer or install an access port or other device as specified by the Department".

INTER-DEPARTMENT MEMO — 1
DATE January 10, 1985

Department of Water Resources
Eastern District Office

DEC 14 1984

Norm Young responded to my memorandum regarding this permit dated January 9, 1985, with the statement that because proof of beneficial use has been submitted with respect to the permit, no change in place of use is allowable. He went on to say that even if proof had not been submitted, the permit would likely not be eligible for change in place of use due to the consumptive component considerations.

Norm recommended that we conduct a field examination of this system to determine if there are any acres irrigated in the system in addition to those described in Water Right No. 27-2126 as transferred by T3047. In this way we can allow maximum credit for irrigation under the current system. Until the examination is completed, we will not take further action on the Application for Amendment of the permit system that are on the fringes of examination there are acres within the existing irrigation system that are on the fringes of the identified tracts, so that some amendment of the permit would be required.

At this point we probably should advise Mr. Stecklein of the Department's decision regarding his amendment as proposed. Either we could write this letter or you can, whichever you prefer. Please advise if you prefer the former, otherwise we will await the results of the field exam.

MEMORANDUM

TO: Norm Young *MA*
THRU: Glen Saxton and Bob Fleenor *BDF*
FROM: Dave Tuthill *DT*
DATE: January 9, 1985
RE: Permit No. 27-7065

Analysis of the pending Application for Amendment of Permit No. 27-7065 has resulted in a basic difference of opinion regarding the nature of a permit water right. The purpose of this memorandum is to describe two different ways of analyzing the permit and to request guidance regarding which alternative is correct.

To properly analyze this situation some background information is necessary. On September 15, 1976, Mr. LaVerelle Stecklein filed an Application for Permit. It appears that the application was filed with assistance from personnel in our Eastern Regional office because the typing was done in the blue ink characteristic of that used by the regional offices at the time. Under item 8(c) the applicant indicated that other water rights used for the same purposes were water rights from Blackfoot River. No indication was made under that item of any water rights from ground water. The staff analysis conducted by Eastern Regional personnel resulted in discovery of an existing Water Right License No. 27-2126, for 4.74 cfs. In spite of this discovery, the application was recommended by the regional office for approval and was subsequently approved by the state office on October 25, 1976.

Proof of beneficial use was due on October 1, 1981. Proof was not filed by that date and the permit lapsed; however, proof was received on November 25, 1981 and the permit was reinstated. No field examination has been conducted with respect to the permit.

On May 24, 1984, LaVerelle Stecklein filed two documents. One was Application for Transfer No. T3047 for License No. 27-2126. The purposes of the transfer were to add a point of diversion and to clarify the land list. The original license, issued to Mr. Theodore Stecklein on February 23, 1968, had identified 237 acres irrigated. The transfer showed the same number of irrigated acres, with a few small changes intended to adjust the land list to fit with the currently irrigated fields.

DEC 14 1989

TO: Norm Young
DATE: January 9, 1985
PAGE: 2

The second document filed by Mr. Stecklein on May 24, 1984, was the Application for Amendment of Permit No. 27-7065. This amendment requests changes in both point of diversion and place of use, with the intent of moving the permit to a totally separate irrigation project located some six miles east of the original point of diversion and place of use.

Item C(4) of the transfer application indicates that "Permit No. 27-7065 will be amended if this transfer is approved." Therefore, the application for transfer was the first document to be reviewed by the state office and was approved on July 30, 1984. Subsequent to the transfer approval, the Application for Amendment was reviewed and in the course of this review, we noticed that the original application had been filed on lands that were fully covered by a licensed ground water right to the extent of a full miner's inch per acre. One possible reason for this duplicate filing is that the point of diversion for the Application for Permit was shown to be the SW $\frac{1}{4}$ NE $\frac{1}{4}$, Sec. 23. This is the same point of diversion that was added to License No. 27-2126 by Transfer No. T3047.

There is no diversity of opinion regarding the factual situation described above. Instead, the diversity of opinion relates to the interpretation of the validity of Permit No. 27-7065 at this time. In a memo dated August 23, 1984, Jim Johnson raised some questions about the validity of the amendment. In response to his memo, we discussed the matter and our resulting solution was described in a letter dated October 4, 1984. In this solution, Jim described that because the Application for Amendment proposes to increase the total number of lands irrigated within Basin 27, it could not be approved as shown unless the applicant could demonstrate that existing water right holders would not be injured as a result of the approval.

This solution is based on the interpretation that Permit No. 27-7065 was filed on lands that were already fully irrigated, so when the permit was approved, it did not, in fact, allow any additional water development. We are saying that each permit, when approved, has an implied consumptive use component based on the use shown in the permit. If the lands described to be irrigated by the permit have no previous water right, then the consumptive use component is that amount required for the irrigation of alfalfa at that location. If the lands already have a partial water right from that source, then the permit provides the consumptive use for the remaining portion of the right. If, as in this case, lands already have a full water right, then the permit provides no consumptive use component.

The alternative solution is to consider the permit to have a consumptive use component, even though the lands described in the permit already have a water right from the same source. If we consider any permit for 4.00 cfs for the irrigation of 210 acres to have a consumptive component for irrigation, regardless of the existing water rights on the 210 acres, then we could consider Permit No. 27-7065 to be eligible for change in place of use to another location.

In response to Jim's letter dated October 4, 1984, Mr. Stecklein visited the Eastern Regional office, which in turn contacted this office. We have subsequently advised Mr. Stecklein that the application is currently being held pending further review, with the anticipation of discussing the matter at the Regional Supervisors' Meeting. However, in a discussion with Bob Fleenor, we decided that this matter would be best resolved at the administrator level. On one hand, in a pure water right sense, approval of the amendment as shown would result in an enlargement of the total number of acres irrigated within the drainage basin, and thus could be considered to be an expansion. On the other hand, with the Swan Falls considerations, we are not sure about Department policy on this matter.

This matter is presented for consideration based on this brief analysis. Please advise regarding the Department's position.

RE: Application for Amendment of Permit No. 27-7065

LaVereille Stekklein
Rt. 3, Box 157
Blackfoot, ID 83221

Dear Mr. Stekklein:

In the course of our review of the above referenced application for amendment, we have found that an existing water right, No. 27-2126, is also appurtenant to the lands described under this permit. Provisions of Section 42-211, Idaho Code, require that the Director should not approve applications for amendment which could affect other water rights adversely. Your amendment application, if approved, would adversely affect other water rights because the lands developed at the new location would be in addition to the lands originally identified on the permit which were already developed under right 27-2126. This additional development results in injury to existing rights which have been filed after permit 27-7065, because, in event of short water supply the junior water rights would be shut off before your permit, even though their water use had been developed prior to your filing of the application for amendment of permit to change the location of the permit to lands not previously developed.

It is this type of result which the Idaho Code directs the Department to present. If you have information concerning your situation which can demonstrate that existing water right holders would not be injured if the Department was to approve your application for amendment, please notify us on or before October 19, 1984. No further action on your application for amendment will be taken until that time.

If we can be of any assistance on this matter, please let us know.

MEMORANDUM

TO: Dave *DM*
FROM: Jim *Jim*
DATE: August 23, 1984
RE: Application for Amendment of Permit 27-7065

The purpose of this memo is to further describe the situation identified in the inter-department memo dated 5/25/84 written by G. F. Ramsey.

The field examiner conducted the examination on the lands identified under this permit, however, he found that an existing license had already been issued on the same land. This land was supplied water from two wells at the same rate as shown on the license but the license only showed one well.

The field examiner suggested to the permit holder that he use the existing license and file a transfer to add the point of diversion and make a few minor adjustments to the place of use description, then once the transfer was approved, the field exam for this permit would recommend that the permit be cancelled on the basis that no beneficial use was developed.

On 5/24/84 the field examiner assisted the permit holder in filing the transfer application. However, unknown to the field examiner, the same day G.F. Ramsey assisted the permit holder in filing the amendment of permit.

Apparently, the permit holder, realizing that he had other property with a permit of junior priority to this permit, decided to amend the permit to save the priority.

A review of this situation raises some questions concerning the validity of the amendment:

1. The permit had proof due October 1, 1981, and proof to beneficial use was filed on 11/25/1981. The amendment now proposes to change the permit to lands which may not have been developed during the permit period. If these lands were not developed before October 1, 1981, can the amendment be approved? If the lands are currently being irrigated, should the Dept. require the permit holder to submit evidence that lands were irrigated before said proof due date?

As an alternative, will the Dept. allow the license to be transferred to the lands identified on the amendment and can the existing permit on these lands be amended to other lands?

2. Given the Swan Falls situation, there may be some value in allowing the permit holder to assign his junior permit to someone who already has water developed but no water right. What is the Dept. policy on this?

I am concerned about the Dept. public relations on this matter. The amendment shows that Dept. staff directly assisted the permit holder and per telecon with Skip Jones, he assisted the right holder with the transfer application. It may, depending on how the questions raised in this memo are addressed, be that the Dept. cannot approve the amendment of permit yet would have allowed the transfer of the licensed water right.

With proper advice, this whole matter could have been resolved with a transfer and an amendment of permit for licensing.

Now it appears we are left with an amendment of permit application which will be denied and the permit holder will lose a water right which was valuable enough to him to file the amendment application.

Allowing this type of transfer would have condoned an expansion of a primary water right onto additional land. ∴ we would not have allowed the transfer.

Dear Mr. Stecklin:

Permit reinstated and priority advanced to November 9, 1976.

We acknowledge receipt of the proof of beneficial use card submitted for the above referenced permit.

Before a license can be issued, a field examination must be made by a representative of this department. We cannot tell just when this examination will be made, but our examiner will try to contact you at the time he makes the examination so that you may show him the system.

If you have any questions regarding the field examination, please contact our eastern regional office.

Very truly yours,
