MEMORANDUM

TO: FILE/PERMIT NO. 25-7129

FROM: TIM LUKE *TL*

RE: SWAN FALLS PROCESSING

DATE: 5-15-89

The permit holer has submitted some documentation that indicates the land was developed prior to July of 1985. Documentation includes an undated photocopy of an ASCS aerial photo. The photo appears to predate 1985 and shows all of the lands under the permit as irrigated. Other documentaion includes a written statement by the Soil Conservation Service verifying installation of a buried pipeline to provide water for a sprinkler irrigation system for lands described under the permit. The statement verifies that the pipeline was installed in September of 1978. It further provides a legal description for the pumping plant that appears to match the location of the point of diversion listed under the permit.

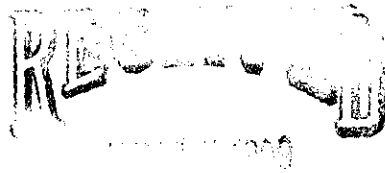

Review of the department's 7.5 minute 1976 orthophoto matches the aerial photo submitted by the permittee, thus verifying that the lands had been irrigated prior to 1985. A statement in the permit indicates that the permit is supplemental to existing decreed rights. A 1983 extension of time request mentions that approximately 78 acres were irrigated with the newer sprinkler irrigation system. Proof was submitted for 100 acres in June of 1988.

Permits developed prior to July of 1985 are exempt from the review of Section 42-203D, Idaho Code (i.e.; Swan Falls Processing). Based on the above evidence, it is recommended that permit no. 25-7129 be exempt from any further review under Section 42-203D. The permit should be removed from the Swan Falls process list and the regional office should proceed with a field examination of this system.

Rigby, ID 83442

Dear Mr. Sonderegger,

According to information contained within your Cooperator Case File in the Rigby USDA Soil Conservation Service Field Office, buried coal tar-wrapped enamel steel pipeline was certified as installed on 20 September 1978 by USDA SCS Technicians. This buried pipeline was installed as an integral component to supply water for a sprinkler irrigation system for fields within the W3/4SE, NESW, S1/2SE, and SW1/2SWNE, Sec. 2, T. 4N., R. 39E.

A pumping plant for water control to supply water to the above mentioned sprinkler irrigation system is located in the approximate vicinity of the NW corner of the SWSWWSWNE, Sec. 2, T. 4N., R. 39E.

Sincerely,

Ronald R. Perrin
District Conservationist

Enclosed are two forms which will help the Department expedite the reprocessing of the permit.

Please complete and return the enclosed questionnaire if you wish to continue with your plans of development or have completed all or a portion of your development before July 1, 1985.

Please complete the enclosed relinquishment form and return it to the Department if you have abandoned or have no interest in continuing with your plans for development of the project.

If the entire project was not completed prior to July 1, 1985, and you still wish to proceed with your plans of development, then you must submit a \$20.00 re-advertisement fee to the Department as required by Water Appropriation Rule 4,2,3. and Section 42-221F, Idaho Code.

RE: Permit No. 25-7129

Dear Permit Holder:

One of the conditions of approval of the above referenced water permit was that proof of the extent of your beneficial use must be submitted to this office on or before July 1, 1988. (See last page of your approved permit or your last approved extension request.) Enclosed is a form which when accompanied by the license examination fee or a completed field examination report prepared by a certified water right examiner may be used to submit the required proof.

If you have not fully completed your project, and you or a previous owner of this permit have not received a prior extension of time, you may request an extension of time if the delay is for reasonable cause as provided in Section 42-204, Idaho Code. If you have been prevented from proceeding by a governmental agency or by litigation which might bring title to the water in question, more than one extension of time can be granted. An extension of time request form is enclosed for your convenience.

Either an acceptable proof of beneficial use submittal or an acceptable request for an extension of time must be received by this Department on or before the above described proof due date, or the permit will no longer be of any force nor effect.

RE: Field Exam 25-7129

DATE: May 23, 1978

Surface waters from multiple unnamed springs emerge in several locations in the SE $\frac{1}{4}$ NE $\frac{1}{4}$, Sec. 2, T. 4N, R. 39E, B.M., county of Jefferson. The water flows in a westerly direction down a natural drain and would seep entirely back into the ground by the time it reached a small ponding area in the SW $\frac{1}{4}$ NW $\frac{1}{4}$, Sec. 2, T. 4N, R. 39E, Jefferson County, if left unimpeded.

A small earth fill diversion dam having a height of seven feet has been constructed in the drain at the proposed point of diversion in the SW $\frac{1}{4}$ NE $\frac{1}{4}$, Sec. 2, T. 4N, R. 39E. The dam will serve to regulate the flow of water in the drain for pumping purposes. A diesel powered centrifugal pump will be placed in the backwaters of the dam for the irrigation of 130 acres of potatoes, alfalfa, and Christmas trees. Water will be diverted through a proposed buried mainline and sprinkler delivery system upon approval of the permit.

From the point where spring waters first emerge to the point where these waters entirely seep back into the ground, the flow of water traverses the lands of three separate property owners. The water emerges on lands owned by the applicant's easterly neighbor, flows across the applicant's land, and sinks on lands owned by the applicant's westerly neighbor. An on-site inspection revealed no pre-existing diversions of the water in question by the applicant's neighbors.

An estimate of the rate of flow of water in the drain was made during the inspection. Approximately five (5) c.f.s. of water is available for appropriation. A small reservoir having an active storage capacity of approximately .10 AF has been created by construction of the dam last fall. The level of water in the reservoir is in a state of equilibrium. The amount of water flowing in from the drain is equivalent to the amount of water percolating back into the ground through the highly permeable gravel and cobblerock bed of the reservoir.

The inspection also revealed that the source of water on the original application had been described incorrectly. The source was erroneously described by the applicant as sub and irrigation waste water where in fact, the source was actually multiple unnamed springs. An amended application was filed the same day the pre-permit exam was made.

As diversion of this water will not injure pre-existing water rights and as there

appears to be more than enough water available for the proposed beneficial use, I can find no reason why this permit should not be approved.

As the applicant filed an application for permit August of 1977, and as he requires the use of water from this source during the upcoming irrigation season, any assistance given to the prompt processing of this application would be greatly appreciated.

Estimate of flow

$$A = L \times W$$

channel width 4 ft.

avg. depth of channel .5 ft.

Cross-sectional area = 4 ft. x .5 = 2 sq. ft.

$$Q = AV$$

Avg surface velocity - 4 ft/sec.

$$Q = (2 \text{ sq. ft.})(4 \text{ ft./sec.})$$

$$Q = 8 \text{ cu ft/sec}$$

Avg velocity $\approx$ 65% of surface velocity

$$Q \approx (8 \text{ cfs})(.65)$$

$$Q \approx 5.2 \text{ c.f.s}$$

Storage capacity

$$\text{length} \approx 75$$

$$\text{width} \approx 16$$

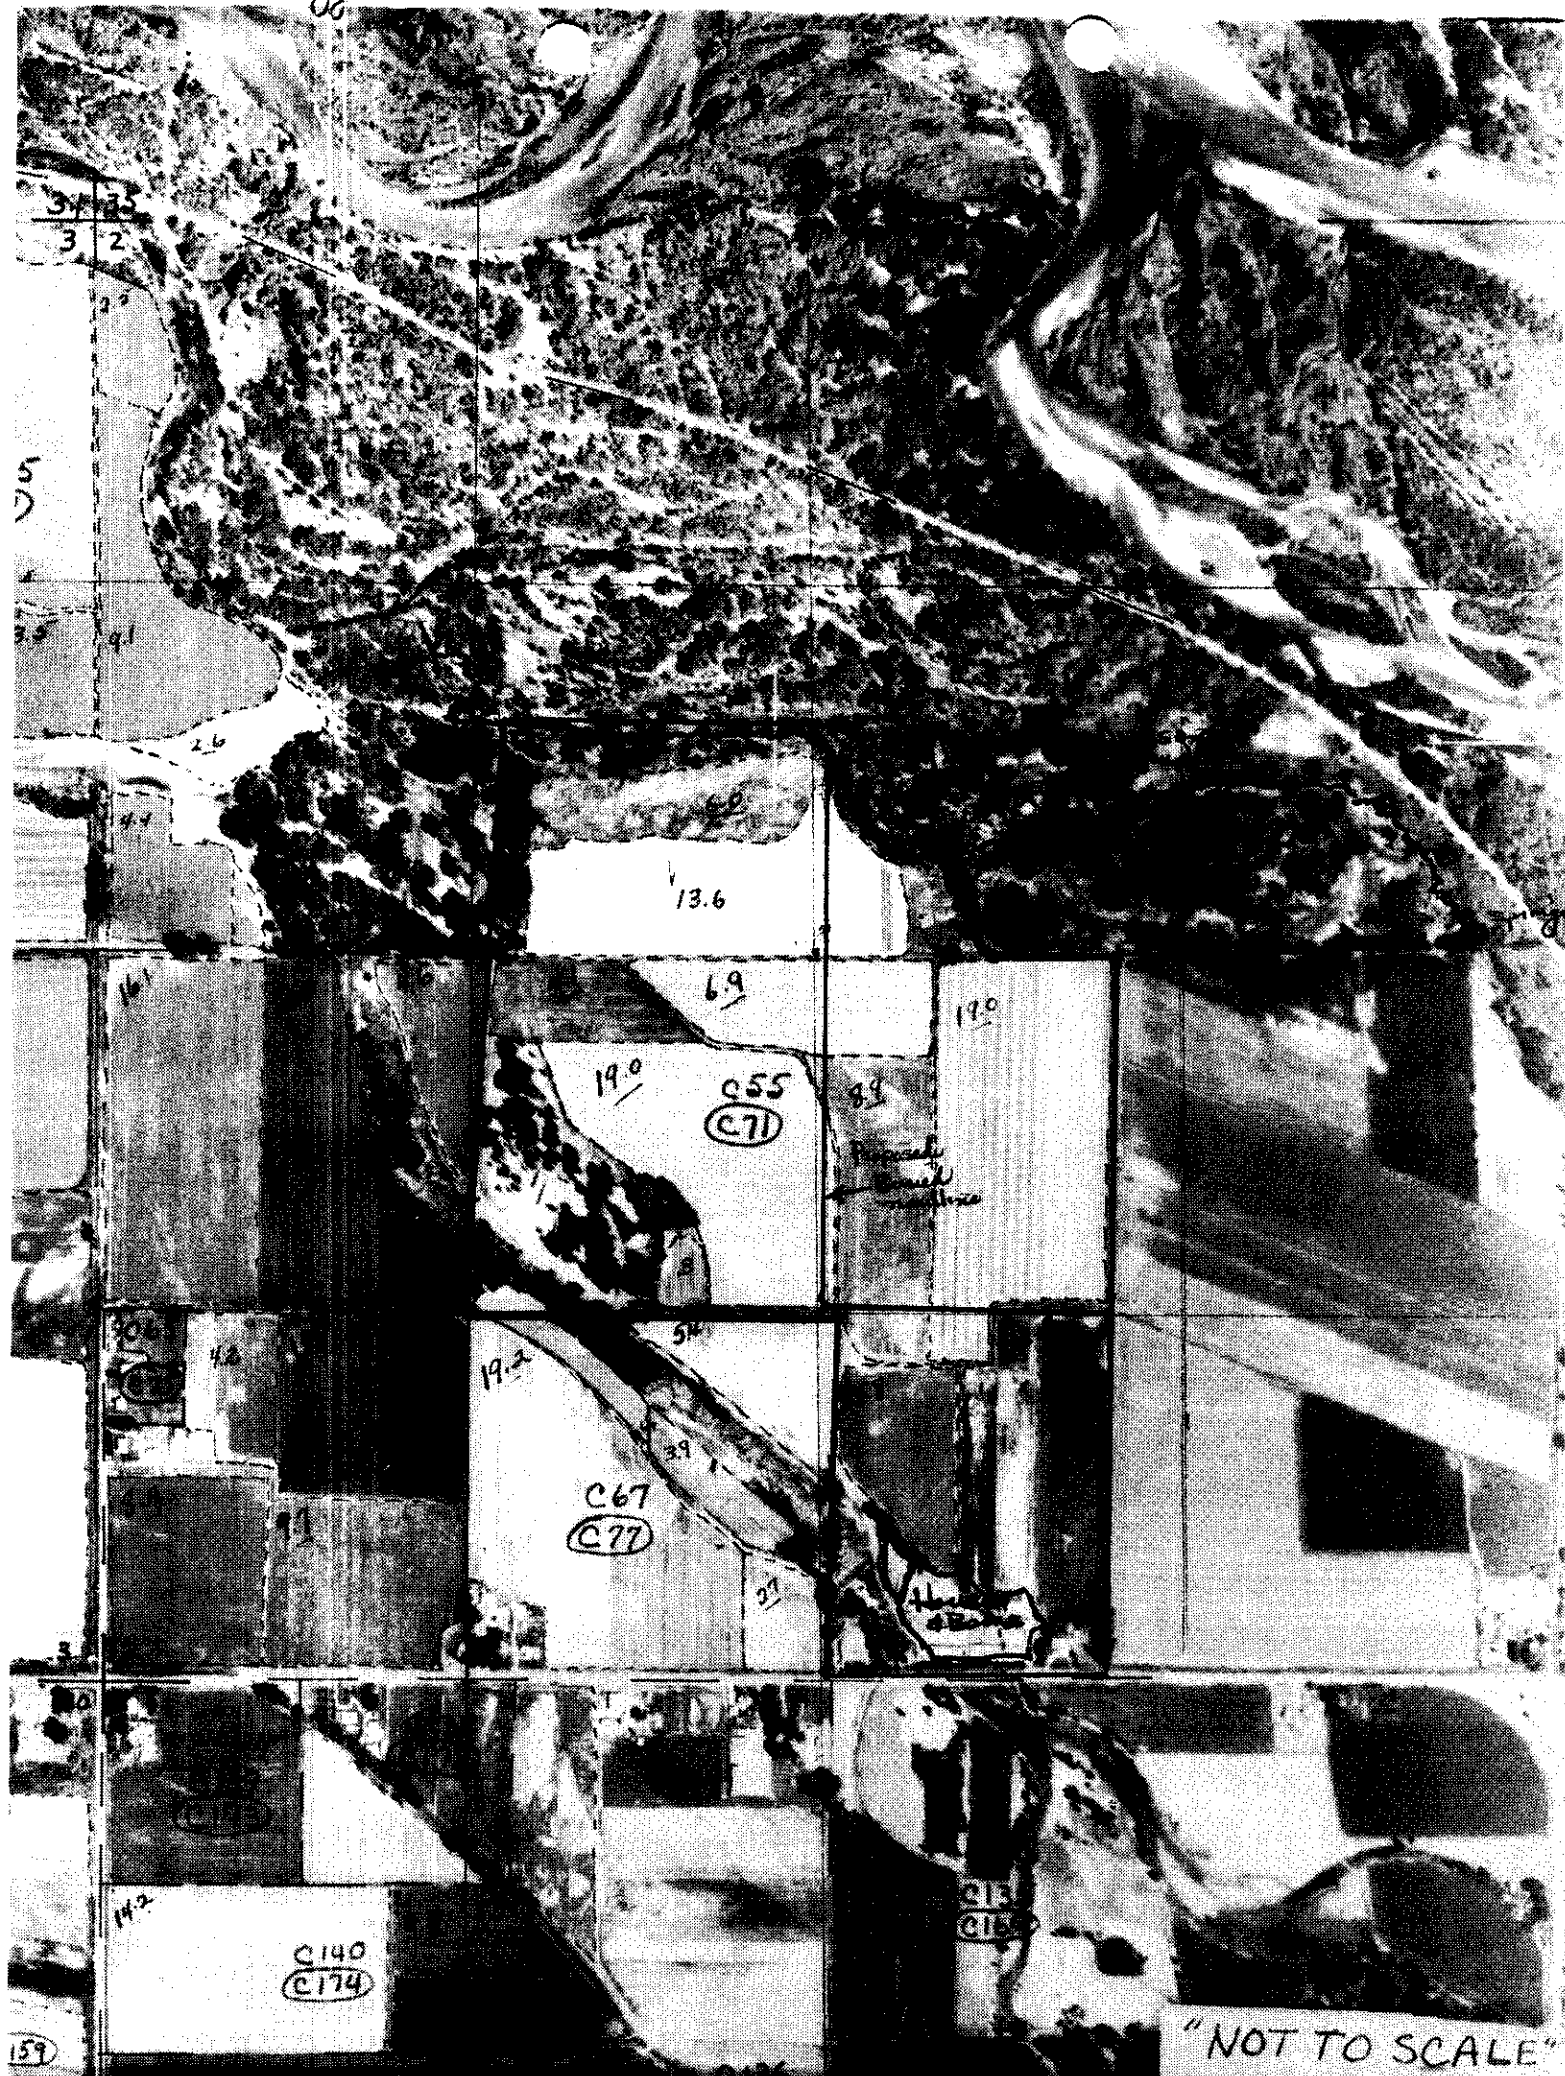

$$\text{avg depth} \approx 4.5$$

$$\text{volume} \approx 5400 \text{ cu. ft.}$$

$$43,560 \text{ cu ft} \approx 1 \text{ AF}$$

$$5400 / 43560 \approx .12 \text{ AF}$$
