Re: Conditions of Approval

This application proposes to split the place of use into two separate parcels of land and add a point of diversion for irrigating a portion of the parcel in the NESW, SENW Section 21 T. 1S R 40E. This new point of diversion is located in the SWSW Sec. 21 T. 1S R. 40E and will take water from a new source. This source is an unnamed stream originating from a spring in the same ~~14~~.

The department does not have flow records for either the spring or Canyon Creek. So its not possible to determine if the spring would be a more reliable source. To insure the volume of water diverted under this right is not increased there should be a limiting condition placed on the transfer. The conditions should restrict the combined rate of diversion to the amount of water flowing in Canyon Creek never to exceed 0.84 cfs.

Such a condition would require the installation of 3 measuring devices for regulation by the watermaster. One would measure Canyon Creek upstream from the applicant's diversion. Then a measuring device would also be needed for each diversion.
