FACTUAL DATA - PALISADES PROJECT

DESCRIPTION OF PROJECT

The Palisades Dam and Reservoir Project is a Multiple-purpose development involving irrigation, power, flood control, recreation, and fish and wildlife. Palisades Dam is located on the main stem of the Snake River at Calamity Point in eastern Idaho about eight miles west of the Idaho-Wyoming boundary and about 50 miles east of Idaho Falls, Idaho.

The project is designed to supply supplementary irrigation water for about 650,000 acres presently irrigated in the Snake River Valley and to provide a portion of the supply for development of about 40,000 acres of new land in the Michaud Flats Project and in the North Side Pumping Division of the Minidoka Project. It also provides flood protection; hydroelectric power badly needed in the Upper Valley to serve irrigation pumping loads, municipalities, rural cooperatives, and other power users; and numerous recreational and fish and wildlife benefits.

The reservoir conserves water saved annually by elimination of present winter canal diversions for domestic and stockwatering purposes in the valley, provides annual storage regulations in years of average runoff, and captures surplus flows in years of above-average runoff for irrigation use in extremely dry years.

WATER SUPPLY

The South Fork of the Snake River rises in Yellowstone National Park and flows southward through Wyoming for about 130 miles between the Teton and Wind River mountain ranges. It enters Idaho at the southern tip of the Palisades Reservoir and continues for approximately 870 miles to empty into the Columbia River. The watershed of the South Fork above Palisades dam site is approximately 5,110 sq. miles, and the annual discharge at this point averages about 4,172,000 acre-feet.

FEATURES OF THE PROJECT PLAN

Palisades Dam (under construction 1953) is the largest earth-fill dam ever constructed by the Bureau of Reclamation. It is a rock-faced, earth fill structure, 273 feet high above the stream channel, 2,200 feet long at the crest, 2,250 feet wide at the base, and 40 feet wide at the crest. The elevation of the crest is 5,630 feet above sea level.

Palisades Reservoir has a surface area of 16,100 acres with a maximum capacity of 1,400,000 acre-feet. Its length is approximately 20 miles and its width at the widest point is 3 miles.

Palisades Power Plant is a brick and concrete structure located at the left abutment. Four generators, rated at 28,128 kilowatts each, produce an estimated annual output of 134,000,000 kilowatt hours of primary and 387,000,000 kilowatt hours of secondary hydroelectric energy.

Flood Control Benefits.—The project provides for flood protection for the Heise-Roberts area. The amount of flood control space will vary from year to year on the basis of yearly runoff forecasts.

Recreational Benefits.—Recreational benefits associated with Palisades Reservoir include the creation of a new lake in a mountain setting attractive to tourists, and enhancement of the recreational value of the Grand Teton National Park through stabilization of the Jackson Lake water level by coordinated operation with Palisades Reservoir. Fish and wildlife will also be benefited by the Palisades Project.

Irrigation Plan. The construction of Palisades Reservoir insures adequate water for the Snake River Valley in times of drought. Waters of the Snake River

have held a key position in the economic development of the area. Jackson Lake (847,000 acre-feet) lies above the Palisades Reservoir on the South Fork of the Snake River. With the inclusion of Palisades Reservoir (1,400,000 acre-feet), a more economical use of the total water supply can be realized. For lack of storage, some 650,000 acres in the Snake River plain have suffered periodic irrigation water shortages. Palisades Dam provides the needed supplemental water to overcome such shortages and firm up irrigation water supplies for 46 canal companies. In addition, two blocks of new land will benefit from Palisades water. One of these is a 13,650 acre unit of the North Side Pumping Division of the Minidoka Project to be served by pumping from the reservoir above Milner Dam. The second block comprises some 25,000 acres in the Michaud Flats Project, most of which will benefit from Palisades water.

Character of Soils in Irrigable Areas.—The soils in the irrigable area have developed from material transported and sorted by action of wind and water. Airborne materials of fine loess giving rise to silt loam soils, blanket much of the greater part of the Snake River Plain. Soils of the main valley floor have developed on older water laid materials of silt, clay, and sand, and on similar but more recent stream alluvium along the courses of the streams.

Altitude of Irrigable Areas.—The elevation of the project varies from 3,000 feet at the lower end to 4,850 feet in the Henry's Fork Valley and 5,630 feet upstream on the main stem.

Irrigation Water Diversion.—West and north of Idaho Falls, soils are predominantly gravelly and water diversions for irrigation range from 8 to 12 acre-feet per acre. For the remainder of the project area, from 5 to 8 acre-feet per acre are diverted. For the new land placed under irrigation, the lesser diversion is anticipated as the soils are largely gravel-free and fine-textured.

Length of Irrigation Season.—The length of growing season throughout the project area generally varies inversely with elevation. Among those areas that are significant agriculturally, Idaho Falls has a growing season of 127 days, Burley of 130 days, and Jerome of 149 days.

Annual Rainfall.—Semiarid climatic conditions prevail in the irrigated areas, where annual precipitation varies from about 8 to 13 inches. In nearby mountain areas, it averages 18 to 20 inches annually. The average annual precipitation at Idaho Falls is 11.27 inches, Burley 9.56 inches, and Jerome 8.26 inches.

Range of Temperatures.—Representative temperatures at selected stations are as follows:

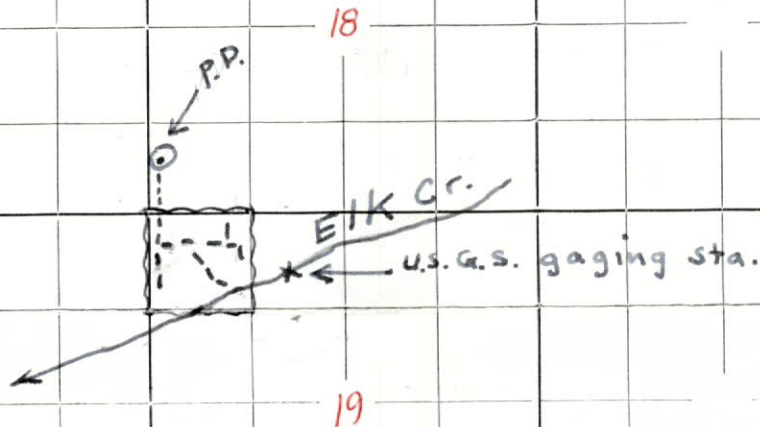

Stations	Max.	Min.	Jan. Average	July Average
Idaho Falls	104	-37	20.4	69.0
Burley	106	-35	25.4	73.2
Jerome	108	-25	26.2	74.5

Principal Products.—The principal farm commodities produced in the project area are potatoes, sugar beets, dry beans, alfalfa, hay, pasture, seed crops, small grains, livestock, and livestock products. Approximately 90% of Idaho's famous "Idaho Russet Potatoes" are grown in the area.

Principal Markets.—The leading exports of the project area are livestock, potatoes, sugar, beans, wool, grain, onions, and dairy products. Livestock is shipped to markets in the Middle West and on the Pacific Coast. Wool moves to Eastern markets, principally Boston and Philadelphia, and a considerable quantity of dairy products is marketed in California. Specialized crops such as the Idaho Russet potato, are distributed throughout the nation.

NOTICE OF PROOF APPLICATION OF
WATER TO BENEFICIAL USE
Notice is hereby given that at 10:00
A.M. on the 16th day of September,
1957, at Swan Valley, County of Bon-
neville, State of Idaho, before Grace
Traughber, proof will be submitted of
the application to beneficial use of
.0248 cubic feet per second of the
waters of Three Springs in accordance
with the terms and conditions of Per-
mit No. 25660 heretofore issued by the
State Reclamation Engineer of the State
of Idaho.
The name and postoffice address of
the person holding said permit are
United States of America, Forest Serv-
ice, Ogden, Utah.
The use to which said water has been
applied is domestic.
The amount applied to beneficial use
is .0248 c.f.s.
The place where said water is used
is Elk Creek Forest Camp, located in
NW1/4NW1/4, Section 19, T. 1 S., R.
46 E.
The name of the canal or ditch or
other works by which said water is
conducted to such place of use is
Three Springs Pipeline.
The right to take water from such
works is based upon Permit No. 25660.
The source of supply from which such
water is diverted is Three Springs.
The date of priority which said user
is prepared to establish is Jan. 7, 1955.
MARK R. KULP
State Reclamation Engineer

APPLICATION FOR PERMIT

To Appropriate the Public Waters of the State of Idaho

APPLICATION No. 33203
PERMIT No. 25660
DISTRICT No.

1. Name of Applicant: UNITED STATES OF AMERICA, FOREST SERVICE

Postoffice address: Ogden County: Weber State: Utah

I. If applicant is a corporation, give:

(a) Date and place of incorporation:

(b) Amount of capital stock:

(c) Amount paid in:

(d) Names and addresses of directors:

II. The financial resources of the applicant are:

(b) Treasury stock:

(d) Other resources:

(a) Cash on hand:

(c) Bonds to be issued:

2. Quantity of water claimed: .0248 cubic feet per second.

3. Source of water supply: Three Springs which is a tributary of Elk Creek

4. Location of point of diversion: N. 9° 58' E., 742 feet distant from the SW.

corner of Section 18, T. 1S, R. 46E, B.M., and is in the Lot 4

of Section 18, T. 1S, R. 46E, B.M., County of Bonneville

5. Water is to be used for Domestic

6. If for mining, milling, power or manufacturing purposes, give:

(a) Point of use of water: feet distant from corner of Section

T., R., B.M., in the of Section, T., R., B.M.

(b) Amount of power generated: H.P., under feet head.

(c) Water is to be returned to at a point feet

distant from the corner of Section, T., R., B.M., in the

of Section, T., R., B.M.

7. Estimated cost of works: \$ 2,000

8. Kind of works: Concrete headbox, iron pipe

9. Height of dam feet; length of dam at top feet; length of dam at bottom

feet; material used in dam:

10. Size of headgate: Width feet; height feet.

11. Ditch: Width at bottom feet; width at water line feet; depth of water feet;

dimensions of flume:

Diameter of pipe inches; length of conduit 1600 ft. 2" iron pipe miles.

Average grade per mile 250' fall/mile feet.

12. The time required for the completion of such work is 5 years.

13. The time required for the complete application of the water to the proposed use is 5 additional years.

14. The land to be irrigated is described in the following tabulation: See remarks.

15. Existing water rights and/or valid permits appurtenant to the lands to be irrigated are:

FACTUAL DATA - PALISADES PROJECT

DESCRIPTION OF PROJECT

The Palisades Dam and Reservoir Project is a Multiple-purpose development involving irrigation, power, flood control, recreation, and fish and wildlife. Palisades Dam is located on the main stem of the Snake River at Calamity Point in eastern Idaho about eight miles west of the Idaho-Wyoming boundary and about 50 miles east of Idaho Falls, Idaho.

The project is designed to supply supplementary irrigation water for about 650,000 acres presently irrigated in the Snake River Valley and to provide a portion of the supply for development of about 40,000 acres of new land in the Michaud Flats Project and in the North Side Pumping Division of the Minidoka Project. It also provides flood protection; hydroelectric power badly needed in the Upper Valley to serve irrigation pumping loads, municipalities, rural cooperatives, and other power users; and numerous recreational and fish and wildlife benefits.

The reservoir conserves water saved annually by elimination of present winter canal diversions for domestic and stockwatering purposes in the valley, provides annual storage regulations in years of average runoff, and captures surplus flows in years of above-average runoff for irrigation use in extremely dry years.

WATER SUPPLY

The South Fork of the Snake River rises in Yellowstone National Park and flows southward through Wyoming for about 130 miles between the Teton and Wind River mountain ranges. It enters Idaho at the southern tip of the Palisades Reservoir and continues for approximately 870 miles to empty into the Columbia River. The watershed of the South Fork above Palisades dam site is approximately 5,110 sq. miles, and the annual discharge at this point averages about 4,172,000 acre-feet.

FEATURES OF THE PROJECT PLAN

Palisades Dam (under construction 1953) is the largest earth-fill dam ever constructed by the Bureau of Reclamation. It is a rock-faced, earth fill structure, 273 feet high above the stream channel, 2,200 feet long at the crest, 2,250 feet wide at the base, and 40 feet wide at the crest. The elevation of the crest is 5,630 feet above sea level.

Palisades Reservoir has a surface area of 16,100 acres with a maximum capacity of 1,400,000 acre-feet. Its length is approximately 20 miles and its width at the widest point is 3 miles.

Palisades Power Plant is a brick and concrete structure located at the left abutment. Four generators, rated at 28,128 kilowatts each, produce an estimated annual output of 134,000,000 kilowatt hours of primary and 387,000,000 kilowatt hours of secondary hydroelectric energy.

Flood Control Benefits.—The project provides for flood protection for the Heise-Roberts area. The amount of flood control space will vary from year to year on the basis of yearly runoff forecasts.

Recreational Benefits.—Recreational benefits associated with Palisades Reservoir include the creation of a new lake in a mountain setting attractive to tourists, and enhancement of the recreational value of the Grand Teton National Park through stabilization of the Jackson Lake water level by coordinated operation with Palisades Reservoir. Fish and wildlife will also be benefited by the Palisades Project.

Irrigation Plan. The construction of Palisades Reservoir insures adequate water for the Snake River Valley in times of drought. Waters of the Snake River

have held a key position in the economic development of the area. Jackson Lake (847,000 acre-feet) lies above the Palisades Reservoir on the South Fork of the Snake River. With the inclusion of Palisades Reservoir (1,400,000 acre-feet), a more economical use of the total water supply can be realized. For lack of storage, some 650,000 acres in the Snake River plain have suffered periodic irrigation water shortages. Palisades Dam provides the needed supplemental water to overcome such shortages and firm up irrigation water supplies for 46 canal companies. In addition, two blocks of new land will benefit from Palisades water. One of these is a 13,650 acre unit of the North Side Pumping Division of the Minidoka Project to be served by pumping from the reservoir above Milner Dam. The second block comprises some 25,000 acres in the Michaud Flats Project, most of which will benefit from Palisades water.

Character of Soils in Irrigable Areas.—The soils in the irrigable area have developed from material transported and sorted by action of wind and water. Airborne materials of fine loess giving rise to silt loam soils, blanket much of the greater part of the Snake River Plain. Soils of the main valley floor have developed on older water laid materials of silt, clay, and sand, and on similar but more recent stream alluvium along the courses of the streams.

Altitude of Irrigable Areas.—The elevation of the project varies from 3,000 feet at the lower end to 4,850 feet in the Henry's Fork Valley and 5,630 feet upstream on the main stem.

Irrigation Water Diversion.—West and north of Idaho Falls, soils are predominantly gravelly and water diversions for irrigation range from 8 to 12 acre-feet per acre. For the remainder of the project area, from 5 to 8 acre-feet per acre are diverted. For the new land placed under irrigation, the lesser diversion is anticipated as the soils are largely gravel-free and fine-textured.

Length of Irrigation Season.—The length of growing season throughout the project area generally varies inversely with elevation. Among those areas that are significant agriculturally, Idaho Falls has a growing season of 127 days, Burley of 130 days, and Jerome of 149 days.

Annual Rainfall.—Semiarid climatic conditions prevail in the irrigated areas, where annual precipitation varies from about 8 to 13 inches. In nearby mountain areas, it averages 18 to 20 inches annually. The average annual precipitation at Idaho Falls is 11.27 inches, Burley 9.56 inches, and Jerome 8.26 inches.

Range of Temperatures.—Representative temperatures at selected stations are as follows:

Stations	Max.	Min.	Jan. Average	July Average
Idaho Falls	104	-37	20.4	69.0
Burley	106	-35	25.4	73.2
Jerome	108	-25	26.2	74.5

Principal Products.—The principal farm commodities produced in the project area are potatoes, sugar beets, dry beans, alfalfa, hay, pasture, seed crops, small grains, livestock, and livestock products. Approximately 90% of Idaho's famous "Idaho Russet Potatoes" are grown in the area.

Principal Markets.—The leading exports of the project area are livestock, potatoes, sugar, beans, wool, grain, onions, and dairy products. Livestock is shipped to markets in the Middle West and on the Pacific Coast. Wool moves to Eastern markets, principally Boston and Philadelphia, and a considerable quantity of dairy products is marketed in California. Specialized crops such as the Idaho Russet potato, are distributed throughout the nation.

Re: Permit No. 25660

Regional Forester
Forest Service Building
Ogden, Utah

Dear Sir:

In reply to letter of October 2, 1958, by Stan K. Greenwood, for A. L. Anderson, Assistant Regional Forester.

We return voucher for the \$5.00 fee License and Certificate of Water Right, under the above numbered permit, which has been properly executed.

You will note that the check should be made to the State Department of Reclamation.

Re: Permit No. 25660

Regional Forester
USDA, Forest Service
Forest Service Building
Ogden, Utah

Dear Sir:

Our field engineer's report on his inspection of the beneficial use of water under the terms of Permit No. 25660 shows the works are capable of conveying .0248 cubic feet per second of water for domestic use.

Upon receipt of the five dollar (\$5.00) fee we will issue the License and Certificate of Water Right under Permit No. 25660 confirming the right with priority of January 7, 1955, to the use of .0248 second foot of water from three springs, with point of diversion in Lot 4 Section 18, for domestic use at camp site in the NW¹/₄NW¹/₄ Section 19, Township 1 South, Range 46 East, B.M.

Very truly yours,

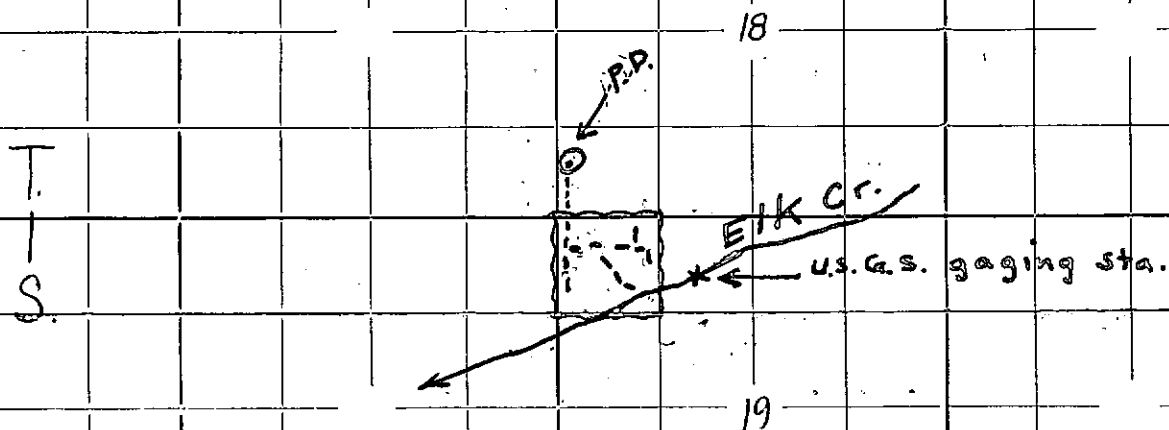

GEO. N. CARTER
State Reclamation Engineer

REPORT OF ENGINEER

PERMIT NO. 25660

~~REPORT ON PROOF OF Beneficial Use~~

U. S. A. Forest Service, Ogden, Utah

INSTRUCTIONS TO EXAMINERS

1. Always carefully note the location of the point of diversion and accurately plat same.
2. When proof is for beneficial use, carefully check up the number of acres actually irrigated in each forty and accurately plat same.
3. Make a map showing the correct location of streams and ditches, and the irrigated lands, and any adjacent permanent landmarks, such as towns, lakes, large streams and public roads.
4. If any unusual conditions are discovered, make plain statement of them under remarks.
5. Always see the holder, if possible, and go over the whole ground with him and make your report only upon actual existing facts and conditions.
6. Give general characteristics of soils, topography, and crops raised.

Revised report on use
of water

Q. 26-25-57

STATE OF IDAHO
DEPARTMENT OF RECLAMATION
BOISE, IDAHO
REPORT OF ENGINEER

Permit No. 25660

This proof is for Beneficial Use In Water District No.

1. Name of applicant U. S. A. Forest Service

2. Source of water supply: Three Springs, tributary to Elk Creek

3. Location of point of diversion: Is in the Lot 4 SW 1/4 of Section 18

T. 1 S. R. 46 E., B. M. County of Bonneville

4. Describe works as they exist, giving dimensions and capacities of same: Spring development high up on steep hill-side. - Concrete reservoir 1359' of 2", 418' of 1 1/2", 918' of 1" and 327' of 3/4" galvanized buried pipe with necessary camp-site fixtures.

5. Water is used for: Domestic purposes

6. State whether or not water has been turned into works of diversion: Yes

7. List legal subdivisions of lands to be irrigated. If proof is for beneficial use, give exact number of acres under cultivation in each forty-acre tract. (Describe manner and place of use if other than irrigation):

NW 1/4 NW 1/4 of Sec. 19 Twp. 1 S., Rge. 46 E., B.M.

Check notes
closed 5/11/60 made 4/27/59
BODUC 5/11/60

(Submit map on attached plat, showing location and details of above description.)

8. What large stream would the water here appropriated finally reach? Snake River if not dissipated before reaching it.

Remarks: Inspection made alone - Forest ranger at Swan Valley interviewed later + Forest service file regarding this spring development examined for construction details. The location was checked with Bureau of Reclamation engineers at Palisades + by county and aerial pictures at court house in Idaho Falls.

Measured at driest time of year
Should produce good crop of alfalfa during early season

This examination was made on the 9 day of Sept., 1958

RE: Permit No. 25660

Mr. A. L. Anderson
Assistant Regional Forester
Forest Service Building
Ogden, Utah

Dear Mr. Anderson:

We acknowledge receipt of the Deposition of Holder and two witnesses, also affidavit of publication in The Post-Register, all submitted in proof of beneficial use on Permit No. 25660.

Before final action is taken in the matter, the law requires that a field examination be made by an engineer from this department.

We cannot tell just when this examination will be made, but our field engineer will try and contact you at the time he makes the examination so that arrangements may be made to show him over the grounds.

After our field engineer has made his examination and has turned in his report we will then write you regarding the fee for the license and are therefore, returning the voucher, unsigned.

Permit No. 25660

Proof of Application of Water to Beneficial Use

Deposition of Holder

Ques. 1. State your name, residence, occupation and postoffice address.

Ans. United States of America, Forest Service, Ogden, Utah

Ques. 2. If acting in behalf of corporation, state its name, principal place of business (if a foreign corporation, give name of postoffice of statutory agent), your position with reference to same, and your authority for appearing in its behalf.

Ans. ---

Ques. 3. State number and date of permit, and date of priority you propose to establish under the permit.

Ans. Permit No. 25660, approved May 11, 1955, priority May 7, 1955

Ques. 4. State source of water supply and give exact location of point of diversion.

Ans. Three Springs tributary to Elk Creek - Point of diversion:

N 9° 58' E., 742 ft. from SW Corner, Sec. 18, T. 1 S., R. 46 E., B.M.

Ques. 5. Describe your works of diversion, and state amount of water they are capable of conveying from point of diversion to place of use, and give name of canal or ditch or other works by which water is conducted to such place of use. If a well, state depth of well, depth and size of casing and depth to water. If pump is used, state discharge of pump and tell how it was measured or determined. If sprinkler irrigation, give number and size of nozzles and operating pressure.

Ans. Concrete headbox, 1600 feet of 2" iron pipe,
average grade 250 feet per mile. capacity .0248 c.f.s.

Ques. 6. State for what purpose water is used and describe place of use. (If for irrigation, name each subdivision in which used, and number of acres in each subdivision that have actually been irrigated with said water.) State whether cultivated or natural meadow land and the nature of all improvements which have been made as a direct result of said use.

Ans. Domestic purposes at the Elk Creek Forest Camp, located in
NW $\frac{1}{4}$ NW $\frac{1}{4}$, Sec. 19, T. 1 S., R. 46 E., B.M.

25660

EPR

Ques. 7. If for other than irrigation purposes; state how applied, amount of horse power generated, etc.

Ans. domestic purposes

Ques. 8. What is the minimum amount of water required for the purpose specified above?

Ans. .0248 c.f.s.

Ques. 9. If you are not the person or representative of the corporation to whom above mentioned permit was originally issued, please state how ownership was acquired by present holder.

Ans. --

Ques. 10. State when, how, in what amount and to what extent the water diverted under above mentioned permit has been used.

Ans. Water has been used for domestic purposes as stated above since July 15, 1956.

Ques. 11. State when, how, in what amount and to what extent waters other than those diverted under the above mentioned permit have been diverted and applied to beneficial use upon the lands herein described. Give full particulars regarding such other appropriations and rights claimed thereunder.

Ans. None

4. Without advertising in accordance with _____
5. Without advertising, it being impracticable to secure competition because of _____

STATE IN DETAIL THE NATURE OF THE EXIGENCY OR CIRCUMSTANCES UNDER WHICH THE SECURING OF COMPETITION WAS IMPRACTICABLE UNDER 3 AND 4

(Here state in detail the nature of the exigency or circumstances under which the securing of competition was impracticable under 3 and 4)

NOTE.—The above form "Method of or Absence of Advertising" is to be used when purchases are made or services secured under proper authority without written agreement in any form. In case of a written agreement (formal contract, proposal, and acceptance, or less formal agreement) Standard Form No. 1036—Revised should be used for abstracting the method of or absence of advertising and award of contract. (See General Regulations No. 51, as amended.)

Mr. Mark R. Kulp
State Reclamation Engineer
State House
Boise, Idaho

Dear Mr. Kulp:

Reference is made to your letter of April 22, 1957.

Attached is a voucher in the amount of \$5.00 to cover fee for recording Completion of Work under Application #25660, Three Springs.

Please sign the voucher on the place indicated and return it to this office for payment.

We shall send you completed forms 10 and 11, Notice of Proof Application of Water to Beneficial Use, and Application Authorization under this permit on or before June 1, 1957.

Very truly yours,

A. L. ANDERSON
Assistant Regional Forester

Re: Permit No. 25660

Mr. Verne L. Despain
Assistant Regional Forester
U. S. Forest Service
Forest Service Building
Ogden, Utah

Dear Mr. Despain:

We wish to acknowledge receipt of proof of completion of works in connection with the above-captioned permit. Proof is in due form and, upon receipt of \$5.00 fee for recording completion of works, Certificate of Completion of Works will be sent to you.

Relative to the proof of application of water to beneficial use, we wish to acknowledge receipt of the deposition of the holder in regard to application of water to beneficial use which we are returning herewith.

We wish to inform you that before beneficial use proof can be approved in this Department it will be necessary to proceed as follows. First, proof of beneficial use requires publication once a week for four weeks in a county newspaper. This notice should be made in duplicate on Form 10 enclosed setting the time and place and naming the Notary Public before whom proof is to be made. The proof may be made anyplace convenient for you and your two witnesses and the time must be set far enough ahead to allow for four weeks publication. Both copies of Form 10 are to be returned to this office, together with Form 11, which is authorization for us to have the notice published at your expense in the designated county newspaper. We shall then send a copy of the notice of the newspaper with instructions in regard to publishing and shall send you the forms for depositions to be executed by yourself and two disinterested witnesses in making the proof.

Very truly yours,
MARK R. KULP
State Reclamation Engineer
