WATER RIGHT LICENSE

WATER RIGHT NO. 63-09751

Priority: June 23, 1981

Maximum Diversion Rate: 3.21 CFS
Maximum Diversion Volume: 2324.0 AF

This is to certify, that IDAHO FOREST INDUSTRIES INC
PO BOX 1030

COEUR D ALENE ID 83814 has complied with the terms and conditions
of the permit, issued pursuant to Application for Permit dated June 23, 1981; and
has submitted Proof of Beneficial Use on September 15, 1982. An examination indicates
that the works have a diversion capacity of 3.210 cfs of water from:

BOISE RIVER tributary to SNAKE RIVER

source, and a water right has been established as follows:

<u>BENEFICIAL USE</u>	<u>PERIOD OF USE</u>	<u>RATE OF DIVERSION</u>	<u>ANNUAL VOLUME</u>
AESTHETIC	01/01 to 12/31	3.21 CFS	2324.0 AF

LOCATION OF POINT(S) OF DIVERSION: Lot 3(NWNE), Sec. 25, Township 04N, Range 01E
ADA County

PLACE OF USE: AESTHETIC

TWN RGE SEC

04N 01E 24	Lot 4(SWSW)	Lot 3(SESW)	Lot 2(SWSE)
25	Lot 3(NWNE)		

CONDITIONS/REMARKS:

1. The maximum diversion volume is defined as the maximum allowable volume of water that may be diverted annually from the source under this right. The use of water confirmed by this right is limited to the amount which can actually be beneficially used. The maximum diversion volume may be adjusted to more accurately describe the beneficial use or to implement accepted standards of diversion and use efficiency.
2. This water right is appurtenant to the described place of use.
3. This right is subject to all prior water rights and may be forfeited by five years of non-use.
4. Modifications to or variance from this license must be made within the limits of Section 42-222, Idaho Code, or the applicable Idaho law.
5. Measuring devices of a type approved by this Department shall be maintained at the point of diversion and point of effluent discharge.
6. The issuance of this right in no way grants any right-of-way or easement across the land of another.

Microfilm

JUN 28 1994

State of Idaho
Department of Water Resources**WATER RIGHT LICENSE**

WATER RIGHT NO. 63-09751

CONDITIONS/REMARKS:

7. Use of water under this water right will be regulated by the watermaster of State Water District No. 63.
8. Diversion and use of water is authorized only when flows in the Boise River warrant delivery of water under a date of priority of June 23, 1981. If this priority cannot be satisfied, diversion must cease unless a) the use is entirely non-consumptive and all water is returned to the river, or b) the consumptive amount of water is replaced from another source or right which is deliverable. In such case, a determination of consumptive use must be made and an acceptable method of replacement must be approved by the department prior to delivery under another source or right.
9. Return flow is discharged into the Boise River via Riverside Creek in the NESE, S23, T04N, R01E.
10. Return flow shall meet Idaho Water Quality Standards.

This license is issued pursuant to the provisions of Section 42-219, Idaho Code.
Witness the seal and signature of the Director, affixed at Boise, this 15th
day of JUNE, 1994.

RECEIVED

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES
APPLICATION FOR PERMIT

APPROVED

To appropriate the public waters of the State of Idaho

1. Name of applicant RIVERSIDE VILLAGE ASSOCIATES Phone 345-8111

Post office address P. O. Box 8866 Boise, Id. 83707

2. Source of water supply Boise River which is a tributary of Snake River

3. Location of point of diversion is NW $\frac{1}{4}$ of NE $\frac{1}{4}$ of Section 25 Township 4N

Range 1E B.M. Ada County, additional points of diversion if any: _____

4. Water will be used for the following purposes:

Amount 3.0 for Aesthetics purposes from Sept 16 to April 14 (both dates inclusive)
(cfs or acre-feet per annum)

Amount 6.0 for Aesthetics purposes from Apr. 15 to Sept. 15 (both dates inclusive)
(cfs or acre-feet per annum)

Amount _____ for _____ purposes from _____ to _____ (both dates inclusive)
(cfs or acre-feet per annum)

Amount _____ for _____ purposes from _____ to _____ (both dates inclusive)
(cfs or acre-feet per annum)

5. Total quantity to be appropriated:

a. 3.0+3.0 = 6.0 cubic feet per second and/or b. _____ acre-feet per annum.

During the irrigation season and high river flows.

6. Proposed diverting works:

a. Description of ditches, flumes, pumps, headgates, etc. A ditch from the Boise River to
Village Lake that will provide a water source.

b. Height of storage dam _____ feet, active reservoir capacity _____ acre-feet; total reservoir
capacity _____ acre-feet, materials used in storage dam: _____

Period of year when water will be diverted to storage _____ to _____ inclusive.
(Month/Day) (Month/Day)

c. Proposed well diameter is _____ inches; proposed depth of well is _____ feet.

7. Time required for the completion of the works and application of the water to the proposed beneficial
use is one years (minimum 1 year — maximum 5 years).

8. Description of proposed uses:

a. If water is not for irrigation:

	NW	NE	25
	SW	SW	24
(1) Give the place of use of water:	SE	SW	24
	SW	SE	24

Range 1E B.M.

(2) Amount of power to be generated: _____ horsepower under _____ feet of head.

(3) List number of each kind of livestock to be watered _____

(4) Name of municipality to be served _____, or number of families to be
supplied with domestic water _____.

(5) If water is to be used for other purposes describe: to provide continuous flow of water
in the waterway along Riverside Drive and to keep water flowing through Village
Lake and prevent stagnant algee water.

MICROFILMED

b. If water is for irrigation, indicate acreage in each subdivision in the tabulation below:

TWP	RANGE	SEC.	NE¼				NW¼				SW¼				SE¼				TOTALS
			NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	

Total number of acres to be irrigated _____

c. Describe any other water rights used for the same purposes as described above. _____

9. a. Who owns the property at the point of diversion Idaho State Dept. of Lands

b. Who owns the land to be irrigated or place of use _____

c. If the property is owned by a person other than the applicant, describe the arrangement enabling the applicant to make this filing see previous agreement with Idaho State Dept. of Lands

10. Remarks The purpose is to provide a water source from the Boise River to Village Lake. A ditch will be excavated to allow the maximum of 3 CFS during low water river flows and 6 CFS during the irrigation season or high water flows. The water flows will be controlled to allow a maximum of 3 CFS during the low water flows of the river and greater during the irrigation season. This application is in addition to an application previously submitted and approved.

ACTION OF THE DIRECTOR, DEPARTMENT OF WATER RESOURCES

This is to certify that I have examined Application for Permit to appropriate the public waters of the State of Idaho No. 63-9751, and said application is hereby APPROVED.

1. Approval of said application is subject to the following limitations and conditions:

- a. SUBJECT TO ALL PRIOR WATER RIGHTS.
- b. Proof of construction of works and application of water to beneficial use shall be submitted on or before October 1, 19 82.
- c. The rate of diversion, if water is to be used for irrigation under this permit, when combined with all other water rights for the same land shall not exceed 0.02 cubic feet per second for each acre of land.
- d. Other: 1. Water diverted under this permit must be returned to the Boise River in same quantity as diverted. 2. Measuring devices and lockable controlling works of a type acceptable to the Department of Water Resources shall be permanently installed and maintained at the point of diversion and at the point where water is returned to the Boise River. 3. The issuance of this permit in no way grants any right-of-way or easement across the land of another. 4. Use of water under this permit is subject to control by the watermaster of State Water District No. 63, Boise River.

Witness my hand this 14th day of September, 19 81.

System Description (continued)

3. **Narrative:** Description (As operating at time of measurement. Indicate pressure, number of sprinklers, etc.)

Point of diversion consists of a ditch connecting the Boise River with Village Lake (see aerial photograph). Water from Village Lake is conveyed via underground pipe to a series of seven lakes at Riverside Village. Lakes are used for aesthetic purposes. After leaving the lakes, water flows through ditches to Riverside Creek which discharges into the Boise River.

RIVERSIDE VILLAGE

Calculation of Evaporative Losses

Since evaporative losses of Boise River water occur from the ponds constructed at Riverside Village for recreation/aesthetics purposes, storage water must be purchased from the Bureau of Reclamation to replace these losses.

Total Lake Area: 5.2 acres (total surface area of 7 recreational lakes within Riverside Village).

Per conversation with Lee Sisco (Boise River Watermaster), the Boise River is supplemented with storage water July 1 to October 15 in an average year to satisfy water rights needs.

Per "Evaporative Losses from Ponds, Boise Area" memo from Bill Ondrechen (attached), evaporative losses from standing bodies of water are approximately equivalent to alfalfa hay evapotranspiration. Monthly values are:

July	8.2
August	6.2
September	4.3
October	<u>0.9</u> (half monthly average)

Total 19.6 inches of water per acre (1.6 acre-ft./acre).

Therefore, Riverside Village must purchase 8.3 acre-ft of water per year (5.2 acres multiplied by 1.6 acre-ft./acre).

JUN 28 1994

M E M O

Department of Water Resources
Western Regional Office

TO: Brad Dingee, Western Region DATE: January 29, 1987
FROM: Bill Ondrechen, ^{WTO} Hydrology
SUBJECT: Evaporation Losses from Ponds, Boise Area

The most commonly used method for estimating evaporation losses from lakes or ponds is to calculate such loss as 70 or 72 percent of observed pan evaporation. This is most correctly done on an annual basis only, as the differing heat balances of a reservoir and an evaporation pan make short-term comparisons less reliable. Since evaporation pan data are collected only at a few sites in the state, it would be desirable to use a method based on climatic data, which are measured at many locations.

Allen and Brockway, 1983, developed estimates of crop evapotranspiration (ET) and irrigation requirements for the state using the FAO Blaney-Criddle method, a climate based method. Their ET estimates for alfalfa hay, the most water-intensive crop, are comparable to lake or reservoir estimates using pan data. The following table illustrates the differences between pan, 70 percent of pan, reference ET (or potential ET) and alfalfa hay ET (all in inches):

	<u>May</u>	<u>Jun</u>	<u>Jul</u>	<u>Aug</u>	<u>Sep</u>	<u>Total</u>
Pan Evap (Parma)	8.0	8.8	9.9	9.1	5.8	41.6
0.7* Pan "	5.6	6.2	6.9	6.4	4.1	29.2
ET _R (Boise)	7.2	9.0	10.1	8.2	6.2	40.7
ET _{hay} "	6.6	7.8	8.2	6.2	4.3	33.1

The ET data are shown for the May through September period to facilitate comparison with the pan evaporation data, which are only available for that period. Alfalfa hay ET compares fairly well with 70 percent of pan evaporation for these months. Since the climate based ET data is available for many sites throughout the state, I would recommend its use, as opposed to taking evaporation data from one location and adjusting it to another location. The average monthly ET (in inches) for alfalfa hay for Boise is:

<u>Apr</u>	<u>May</u>	<u>Jun</u>	<u>Jul</u>	<u>Aug</u>	<u>Sep</u>	<u>Oct</u>	<u>Total</u>
4.3	6.6	7.8	8.2	6.2	4.3	1.8	39.2

The total of 39 inches compares well with the average annual lake evaporation for the Boise area of 36 inches as given by the Idaho Water Resources Inventory (Univ. of Idaho, 1968). Evaporation losses in months outside the April-October period are more than offset by precipitation.

Dear John:

Re: Private Lake Inflow-Outflow

As requested sometime ago, we are pleased to present for your use the results of our water flow survey that was taken earlier this month. The purpose of this survey was to approximate an inflow quantity of water that is being diverted from the Boise River near the Glenwood Avenue bridge, and then approximate the outflow quantity of water that is leaving the private lake directly west of Lakeview Place. The difference between these two measurements being the total lake system water exfiltration rate.

Please keep in mind that we were unable to locate an adequate location to determine water flows immediately downstream of the "public" lake that is directly west of Glenwood Avenue, therefore the flow measurements were taken in the channel from the Boise River to the "public" lake. Any lake exfiltration that is occurring in the "public" lake is included in our measurements.

Measurements were taken during the afternoon of Thursday, September 4. Equipment used was a Marsh-McBirney electronic current meter (model 201). The upstream test location was as described above, and the downstream location was within a small earthen ditch that was immediately downstream of the last lake.

System inflow was determined to be approximately 2.68 CFS. System outflow was determined to be approximately 1.09 CFS. Therefore the total apparent system exfiltration rate was approximately 1.59 CFS.

If you have any questions, please feel free to call.

Sincerely,

J. D. Canning

Dear Permit Holder(s):

This office acknowledges receipt of the Assignment of the above referenced permit to you. Enclosed for your records is a copy of the permit.

As new owners of the permit, you are required to submit either an EXAMINATION FEE or a statement from a certified examiner that he has been retained to do a field examination of your water use.

Enclosed is a copy of the EXAMINATION FEE NOTICE sent to the previous permit owner. Please read and take proper action. You should note that the notice was sent on April 30, 1986 and after 60 days a day of priority of your permit is lost for every day the fee or statement is not received by this office.

In order to keep this permit in good standing, you must respond to the Examination Fee Notice as soon as possible. If you have any questions regarding this matter, please feel free to contact us.

Sincerely,

JIM JOHNSON
Water Rights Supervisor

CERTIFIED MAIL

EXAMINATION FEE NOTICE

Dear Permit Holder:

Department records show that proof of beneficial use has been submitted for the above-referenced permit, but that a field examination has not yet been conducted to determine the extent of beneficial use of the water for licensing purposes.

House Bill 671 (effective April 4, 1986) enacted by the 1986 Idaho Legislature requires the payment of a fee before this department can conduct the field examination needed to issue a license confirming use of water under the permit. This letter is notification that the license examination fee is due within sixty (60) days of the date of this letter. The examination fee information sheet (enclosed) must be returned with the fee.

As an alternative to submitting the fee, the department will accept a field examination report completed by a certified water right examiner from the private sector. If you choose to have the examination done by a certified water right examiner, you need not submit the license examination fee to the department, but you must within sixty (60) days of the date of this letter return to the department, the examination fee information sheet showing appropriate information together with a statement from the certified examiner to verify that you have retained a certified examiner to conduct the field examination. If you choose this alternative, a completed field examination report must be submitted within one year of the date of this letter. You cannot later change your decision to use this alternative and submit the fee needed for the department to conduct the field examination, but you may change to another certified examiner.

Certified water right examiners are licensed engineers, geologists, or land surveyors certified by the department to conduct water right examinations. The procedure for certifying examiners results from the recently enacted HB 671 and is being developed at this time. A listing

of certified water right examiners will be available from this department when examiners have been certified.

If your permitted use, in fact, has already been examined by the department and you have not asked to have the examination repeated, the fee requirement is not applicable to your permit. If you believe this is the case, please contact the department.

The license examination fee is to be based on the amount of water you indicate you have developed, as listed in item 6 on the examination fee information sheet. The amount of water on which the examination fee is based can be less than the permitted amount, if less water has been diverted and beneficially used. The licensed amount of water, however, will not exceed the amount you claim on the examination fee information sheet. The enclosed license examination fee schedule shows a listing of applicable fees.

FAILURE TO SUBMIT WITHIN THE SIXTY (60) DAY PERIOD, THE FEE OR THE STATEMENT THAT A CERTIFIED EXAMINER HAS BEEN RETAINED TO MAKE THE FIELD EXAMINATION, WILL BE CAUSE TO ADVANCE THE PRIORITY OF THE PERMIT ONE DAY FOR EACH DAY THAT THE FEE SUBMITTAL IS LATE.

FAILURE TO SUBMIT THE FEE OR THE COMPLETED FIELD EXAMINATION REPORT WITHIN A YEAR WILL BE CAUSE TO CONSIDER THE PROOF OF BENEFICIAL USE TO BE INCOMPLETE AND TO LAPSE THE PERMIT.

The attached examination fee information sheet and the fee may be submitted to the following department offices.

Alvin S. Marsden
Box 771
Boise, ID 83701

RE: Permit No. 63-9751

Dear Mr. Marsden:

I am writing in response to your letter dated October 22, 1982, in which you requested removal of the requirement that measuring devices be installed at the point of diversion and point where the water is returned to the Boise River, for the above-referenced permit.

As you are aware, the Boise River provides irrigation water for hundreds of thousands of acres in Southeastern Idaho. The extensive utilization of the river fully depletes the available natural flows each summer, normally by mid-June. When the natural flows are not sufficient to supply diversions from the river, stored water leased from the U. S. Bureau of Reclamation is released from Lucky Peak, Arrowrock, and Anderson Ranch reservoirs to supplement natural flow water rights. Therefore, although the river carries much water throughout the year, during the summer almost every drop is appropriated.

Our concern regarding the aesthetic uses described in the above-referenced permit is that evaporation and seepage losses in the ponds and canals may decrease the flow of the river. The intent of the measuring device condition is to monitor this loss. Since installation of measuring devices is impractical, there may be an alternative way to establish the relationship between inflow to and outflow from the aesthetic system. One method would be to commission a registered professional engineer or registered professional geologist to make a series of measurements at the point of diversion from the river and the point of injection into the river at various times of the year to establish the amount of loss. If no loss can be shown, then possibly the measuring device requirement can be waived. If a loss is discovered, then it must be replenished by either stored water or non-tributary groundwater.

RECEIVED

Alvin S. Marsden

Re: Riverside Village
Measuring Control Device

Dear David:

*please pull
give to Jim*

As per application #63-9751 a control and measuring device was required. We intend to install the control device as soon as possible but we are having difficulty in providing a measuring device to measure the volume of water being used. The difficulty is that both the inlet pipe and outlet portion of the pipe from the Boise River is fully submerged; therefore, it is requested that our application be approved without the required measuring device. Currently, the water from the Boise River to Village Lake and the internal pond system is supplied from the Boise River. The water used is for non-consumptive purposes and used primarily for aesthetic reasons. In addition, we use the water for irrigating the berms and landscaping along the pond system and a portion of the greenbelt. The total amount of acres currently irrigated is 9.1. The means of irrigation of the greenbelt and the berms along the Riverside Drive is through a 4" pump pipe that alternates irrigating daily each portion of this area during irrigation season.

Our request for approval of this application modification to allow us not to install a measuring device at the Boise River water source is requested. If you have any questions do not hesitate to call me.

Sincerely,

Alvin S. Marsden

FROM: David Shaw ^{DBS}

SUBJECT: Source of Water

DATE: May 22, 1981

Department of Water Resources

This application lists the source of water as Village Lake, which is adjacent to the Boise River but does not have a surface connection between the river and the lake. I inspected this lake at the time it was excavated and believe the primary source of water for the lake is groundwater, rather than surface flow from the Boise River infiltrating to the lake. During the excavation, the lake was kept empty by pumping and it seemed the primary inflow to the lake was not from shallow infiltration from the river. In fact, a large portion of the inflow came from the side of the lake opposite the river.

For the ^Aconsumptive use requested to irrigate the levees, I believe the groundwater inflow to the lake is adequate. The larger flow proposed is for aesthetics and will be non-consumptive for water amenities through the development.

Re: Application for Permit for water right
Riverside Village

Dear Dave:

Attached you will find an application for a permit to obtain a water right from the Boise River for 3 CFS at low water levels and amount greater during, but not to exceed 6 CFS during high level water flows.

The water would go from the Boise River into the Village Lake and then proceed by pipe from Village Lake to the internal lake system within Riverside Village. Your approval is requested and if you have any questions, do not hesitate to contact us.

Sincerely,

Alvin S. Marsden
