WATER RIGHT LICENSE

License of Water Right No. 63-8176 Priority August 7, 1975 Amount 0.09 cfs

THIS IS TO CERTIFY, that John Chamberlain
of Meridian, Idaho, has complied with the terms and conditions of Permit
No. 63-8176 issued pursuant to Application for Permit dated August 7, 1975,
and has submitted proof to the Department of Water Resources on October 8, 1980,
that he has applied water to a beneficial use; an examination by the Department indicates that the works have a
capacity for the diversion of 0.24 cfs of water from Boise River,
tributary to Snake River, and that the permit holder has applied to a beneficial use and
established a right to use water as follows:

Beneficial Use	Period of Use	Rate of Diversion	Annual Volume
<u>Irrigation</u>	from <u>March 15</u> to <u>November 15</u>	at <u>0.09</u> cfs and	<u>13.5</u> acre feet
	from _____ to _____	_____ cfs and	_____
	from _____ to _____	_____ cfs and	_____

(both dates inclusive)

Subject, however, to the condition that no more than 0.09 cfs of water be diverted at any one time, and
that the amount of water so diverted and to which such right is entitled and confirmed is for the purpose
aforementioned and is limited to the amount which can actually be beneficially used and shall not exceed
13.5 acre feet per year, said waters to be diverted within the SWNE, Section 24, Twp.
4N, Rge. 1W in the County of Ada

Use of water under this right is subject to control by the watermaster of State
Water District No. 63, Boise River.

NOTE: Modifications to or variance from this license must be made within the limits of Section 42-222, Idaho
Code, or the applicable Idaho Law. This right may be forfeited by five years of non-use.

The right to the use of the water hereby confirmed is restricted and appurtenant to the lands or place of use
herein described, as provided by the laws of Idaho.

10. Remarks See Attachment A

"ATTACHMENT A"

This amended application is to replace application #63-8176 which had intended to divert water directly from a series of springs which has been developed for irrigation purposes. Since initiation of that application, however, construction on adjacent property by the property owner has caused the entire flow of the springs to be diverted directly to the Boise River, no longer flowing across the applicants land.

The construction was in the form of a three to four foot excavated channel through which the owner intends to lower the water table on his property, thus converting it to pasture land. The applicant, realizing that it would be impossible to establish a pumping site and pond on his neighbors property now wishes to divert the water previously filed upon from the Boise River at a point approximately 300 feet downstream from where the spring flow now enters the river. The water to be pumped will not originate from the river, but will be in reality the spring flow entering just upstream on an exchange basis.

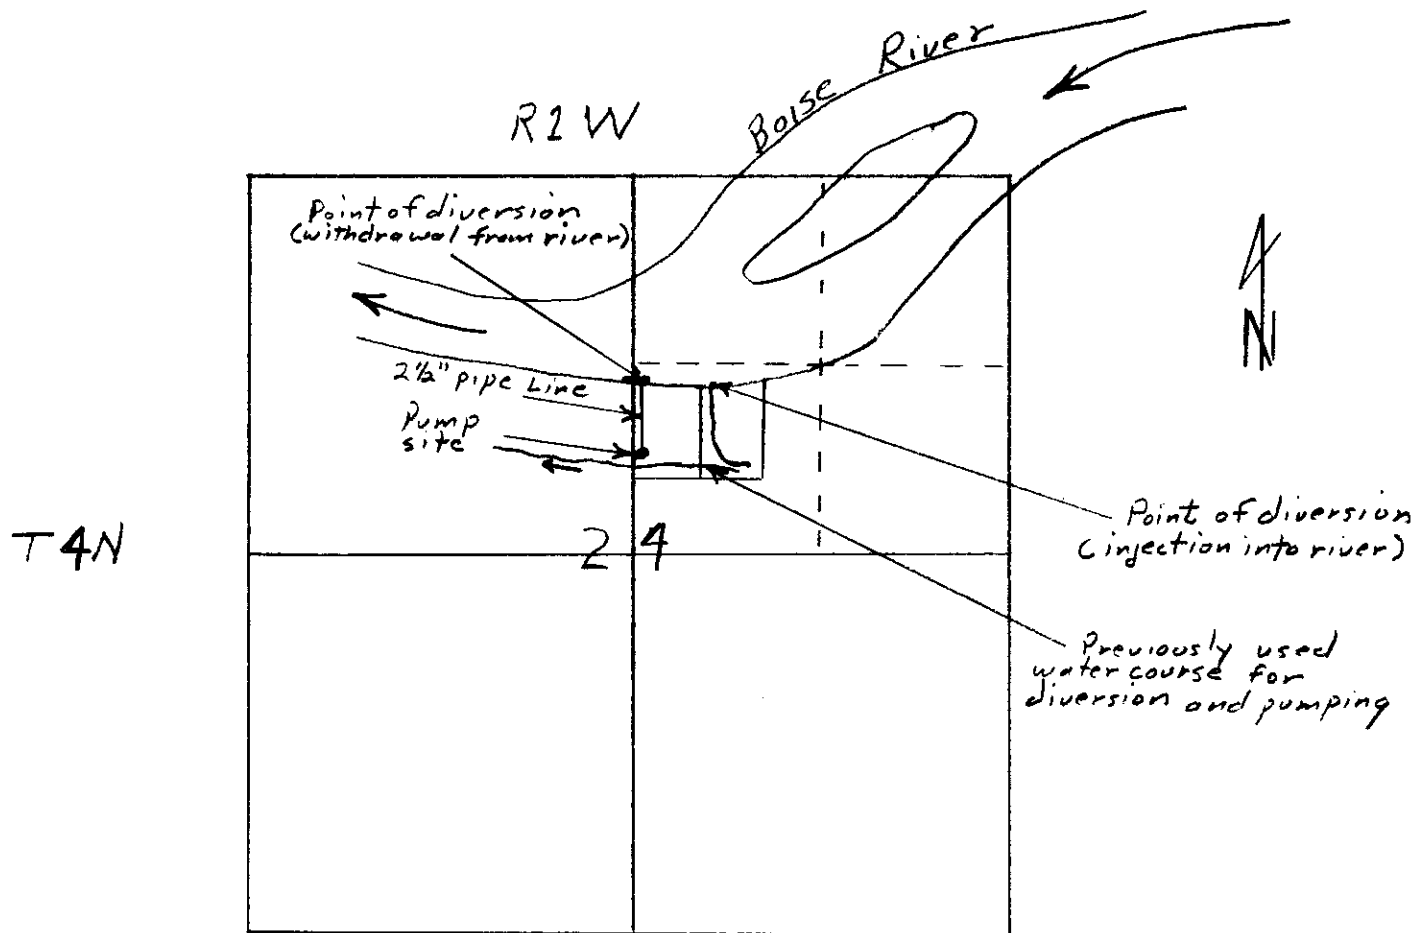

The water entering the Boise River is estimated to be from two to three times the amount to be pumped. The diversion channel constructed by the adjacent property owner is one that could be current metered to determine the flow entering the river if necessary.

The capacity of the pump which will be utilized to withdraw water from the river is such that no more than 45 gallons per minute will be withdrawn with the existing system. No transmission loss need to taken into account for this exchange since the distance between the injection and withdrawal is so short that in all probability no loss could be measured.

The applicant would like to stress that the water to be used for irrigation of his five acres is water developed from the springs through excavation of a ditch across his neighbors and his own property approximately in September of 1973 and through tileing of the watercourse across his own property in June of 1974. The water to be pumped will not be derived from storage on the Boise River system, but from this developed spring water and previously filed upon by the applicant.

The attached map graphically describes the intended operation, but if necessary, a guided field examination will be provided to representatives of the Department upon request.

10. Remarks Irrigation water is necessary to provide for adequate watering of lawn, shrubs and pasture ground on applicants property. Water will be delivered through a totally enclosed sprinkler system. The springs in question rise both on and off the applicants property and eventually some of the water makes its way to the Boise River through a drainage channel constructed by the previous owner. Under natural conditions the water would stand in low marshy areas during the summer months and little if any would reach the river.

Applicants water from the Boise Project is essentially non-deliverable due to existing construction and delivery sequence and will be considered only a supplemental basis. Approximately 2 miners inches per acre is necessary to adequately operate the sprinkler system for irrigation of the property. A lesser diversion rate would require throttling of the pump with resulting decrease in efficiency and excessive wear. Additionally, it would be nearly impossible to maintain a proper irrigation cycle frequency with a lesser amount.

It is requested that this system be exempted from the requirement of an installed measuring device.

Dear Sir: A representative of this Department has made an examination of the works covered by your Permit No. 63-8176, and has found the following:

Amount of water that can be recognized as beneficially used under
Idaho law: 0.09 cfs Source: Boise River

The maximum quantity diverted shall not exceed 13.5 acre feet per year.

Point(s) of diversion: SW¹/₄NE¹/₄, Sec. 24, Twp. 4N, Rge. 1W, Ada County

Beneficial use: Irrigation of 3 acres within the SW¹/₄NE¹/₄, Sec. 24, Twp. 4N,
Rge. 1W

Priority date established: August 7, 1975

Conditions (if any): Use of water under this right is subject to control
by the watermaster of State Water District No. 63, Boise River.

If you do not concur with these findings please contact us within 10 days, otherwise
water license will be issued as set forth above.

MEMO

DATE: November 26, 1975
TO: File 63-8176
FROM: Robert Hamilton
SUBJECT: Inspection of area and system

Sherl Chapman and I went to the John Chamberlin residence to inspect the spring area and drain dug to drain adjoining lands.

The area that has been drained was an old slough with cattails and grass that are now on solid ground. The newly dug drain is presently contributing 0.4 to 0.5 c.f.s. to the river. The slough which formerly collected the spring water had had no surface connection with the river. The suction line is presently installed in the river and can be used when necessary.

Hank Koelling, Boise River Watermaster, sees no need for measuring devices as he feels the river water users will not be injured by approving this application.

The application asks for 0.2 c.f.s. even though the pump will only pump 0.1 c.f.s. That amount is also 2 inches per acre. Recommend 0.1 c.f.s. be allowed. I talked with Chapman and he will inform Mr. Chamberlin that we are going to reduce the amount of water allowed. It was originally intended to level the slough area and irrigate it.
