We need to reconcile
the land list in 63-7267
with the land list in 63-2980.

Note that there is an overlap that
would boost in to more than
1" per acre. In this case, where
they are separate ^{P.D.'s} systems, I think
a condition of approval would
suffice to clear up the problem.

Dear Mr. Tiegs:

On August 10, 1979, at your request, we performed measurements to certify the rate of diversion for your Water Permit No. 63-7267. The system was being operated in a normal manner with flow being diverted into a trapezoidal-shaped, concrete-lined ditch. An ott brand current meter Type "10.002" was used to measure the current velocity. Three (3) consecutive readings indicated 42 revolutions of the propeller per 50 second interval or $n = 42/50 = 0.84$. Using the manufacturer's calibration formula for $n > 0.52$, $Velocity = 1.6990n + 0.007$ or 1.43 feet per second.

Bottom width of the ditch was 1.0 feet and top width at the water surface was 3.18 feet. Flow depth was 1.11 feet so the area of flow was 2.32 square feet.

The rate of diversion is the product of the area and the velocity or 3.32 cubic feet per second. This is also equal to 1487 gallons per minute or 166 miners inches.

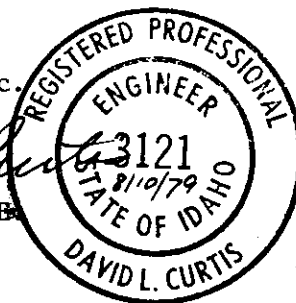

If you have any questions about this certification or if we can be of further assistance, please contact us.

Sincerely,

J-U-B ENGINEERS, Inc.

Nampa, Idaho 83651

Dear Mr. Tiegs:

On August 10, 1979, at your request, we performed measurements to certify the rate of diversion for your Water Permit No. 63-7267. The system was being operated in a normal manner with flow being diverted into a trapezoidal-shaped, concrete-lined ditch. An ott brand current meter Type "10.002" was used to measure the current velocity. Three (3) consecutive readings indicated 42 revolutions of the propeller per 50 second interval or $n = 42/50 = 0.84$. Using the manufacturer's calibration formula for $n > 0.52$, $Velocity = 1.6990n + 0.007$ or 1.43 feet per second.

Bottom width of the ditch was 1.0 feet and top width at the water surface was 3.18 feet. Flow depth was 1.11 feet so the area of flow was 2.32 square feet.

The rate of diversion is the product of the area and the velocity or 3.32 cubic feet per second. This is also equal to 1487 gallons per minute or 166 miners inches.

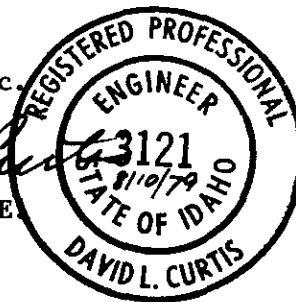

If you have any questions about this certification or if we can be of further assistance, please contact us.

Sincerely,

J-U-B ENGINEERS, Inc.

David L. Curtis

Enclosed is an affidavit form which must be used to submit the required proof of beneficial use.

If you have not fully completed your project, and you have not previously received an extension of time, you may request an extension of time provided the delay is for reasonable cause as indicated in Section 42-204, Idaho Code, amended. If you have been prevented from proceeding by a governmental agency or by litigation, more than one extension of time can be granted.

Either the beneficial use affidavit or a request for an extension of time must be received by this Department on or before the above mentioned date, otherwise the permit will lapse and be of no further force or effect.
