The motor is a Westinghouse 30 h.p. 220 volts, 3 phase, serial No. is 4-1-V-225. The lift is 90 ft. and the drawdown is 30 ft. The ditch is 18 inches wide on the bottom, 2 ft. at the water line and is 6 to 9 inches deep.

The packing was done by pouring a smooth river gravel down a 4" pipe which extended down close by the outside of the casing of the main well. The well is 16 degrees centigrade temperature.

Approximately 35 acres above existing gravity canals has no other source of supply for water than this well. Later in the season, the well will be pumped to full capacity to supply supplemental water to the balance of the farm instead of buying storage water from the Anderson Ranch Dam.

Soil is a clay loam. Crops being grown are beets, potatoes and pasture.

Dear Mr. Ward:

We acknowledge receipt of the depositions of yourself and two witnesses; also Affidavit of Publication in the Caldwell News-Tribune, all submitted in proof of Beneficial Use under Permit No. 20590.

Before final action is taken in the matter, the law requires that a field examination be made by an Engineer from this Department.

We are unable to say just when this examination will be made as this Department has but one Field Engineer who makes examinations all over the State.

However, the Field Engineer for this Department will try and contact you at the time he makes the examination in order that you may arrange to show him over the grounds.

Very truly yours,
