The system consists of a 6" diameter well with a 2HP submersible pump located approx. 285' from a pressure tank inside the home. Water is then distributed for one domestic use and approx. 1.2 acres irrigation. Irrigation is provided from an outside faucet and hoses to approx. 30 trees and natural vegetation. Water to the pressure tank was through a 1 1/4" buried line and the system was maintaining 50 psi at the time of exam.

Other rights in some P & Q don't affect this permit.

The area irrigated was determined during the exam to be approx. 1.2 acres of native grasses and young trees. The proof of beneficial use claimed domestic and .5 acres irrigation. Recommendation is to license the domestic and .5 acres irrigation at .04 cfs.

Must Separate domestic & irrigation components to remain consistent with permit.

IRRIGATION RIGHT FROM A GROUND WATER SOURCE

A theoretical calculation is necessary to determine if a measurement is required for irrigation from a groundwater source.
=====

1. Using the found acres (or an estimate by the permit holder) calculate the acre-foot per annum limit. This is the volume that the system must be able to theoretically produce to exclude a rate of flow measurement.
2. Next, given the pump hp and the estimated dynamic water level, calculate the theoretical rate of flow that the system can produce.
3. Using the rate found in step 2 and the days in the permitted irrigation season, calculate the theoretical AFA that the system could produce. This volume is then compared to the first AFA calculation. If the theoretical volume (step 3) is greater than the irrigation requirement volume (step 1) then no measurement is necessary. If it is less, then you must make a diversion rate measurement during the field examination.

1.
$$\frac{1.2}{\text{Found Acres}} * \frac{4.5}{\text{Irr. Req.}} = \frac{5.4}{\text{AFA}}$$
2.
$$\frac{(2) \text{ HP} * 8.8 * (.70) \text{ EFF}}{(\frac{86}{150}) \text{ Dyn Level} + (2.3 * \{50\} \text{ PSI})} = \frac{.05}{.06} \text{ CFS } \frac{12.32}{201}$$

Theor. Div. Rate
3.
$$\frac{.05}{\text{Theoretical Div. Rate}} * \frac{246}{\text{Days in season}} * 1.9835 = \frac{24.4}{29.90} \text{ AFA}$$

RE: PERMIT NO. P63-10800

Dear Permit Holder:

Enclosed is a copy of your approved application for permit. We direct your attention to the conditions of approval on the final page.

You should be aware that the groundwater you propose to divert is located within a drainage basin where surface waters are regulated during the months of low flow. It is possible that diversion of groundwater may have an adverse impact on these surface water flows. Information available to us at this time does not warrant refusing to issue permits in your area, but we do caution that diversions of groundwater are not allowed to deplete flows available for surface water users with earlier priority dates. Siting your well as far from surface sources as possible and casing out upper water producing zones may reduce the potential of interference.

Section 42-235, Idaho Code, requires that a "drilling permit" must be obtained from the department for all wells constructed after July 1, 1987. A drilling permit is a separate permit that must be issued in addition to your permit to appropriate water. Commencement of well construction or diversion of water under your permit to appropriate water is prohibited unless a drilling permit is obtained.

Please note the requirement that as a permit holder you must commence the excavation or construction of diverting works within one year of the date the permit was issued, and you must proceed diligently until the project is completed. The enclosed blue card must be completed and returned to this office as soon as you commence construction, no later than one year from the date the permit was approved.
