A hand-drawn map of a land survey, likely a river or stream bed, with various numerical data points and labels. The map is oriented with a north arrow pointing towards the upper left. The survey area is bounded by a horizontal line at the top and a wavy line at the bottom, representing the river or stream. The map is divided into several sections by vertical lines. Key numerical data points include:

- Top left: 6.2.28, 10.12, 22.88
- Top center: (811) 57.12
- Top right: 39.20, 26.63, 15.40, 19.37, 39.56, 19.35, 67, 3.
- Left side: 54.30, 13.10, 18.25, 19.30
- Center: 17.00, 27.90, 36.50, 46.60, 38.63
- Right side: 19.48, 19.35, 67, 3., 25.60, 26.18, 15.28, 34.58
- Bottom: 180 0.8

The map also includes several labels and annotations:

- "Verch" written vertically on the left side.
- "West" and "East" written near the bottom right.
- "100" written near the bottom left.
- "60" written near the bottom center.
- "100" written near the bottom right.

The map is drawn on a grid of dashed lines, and the river or stream bed is indicated by a wavy line at the bottom. The overall appearance is that of a historical survey document.

WATER RIGHT LICENSE

WATER RIGHT NO. 63-10608

Priority: April 4, 1988

Maximum Storage Volume:

6.0 AF

This is to certify, that WATERFOWL IMPROVEMENT ASSN INC

PO BOX 2773

BOISE ID 83701

has complied with the terms and conditions of the permit, issued pursuant to Application for Permit dated April 4, 1988; and has submitted Proof of Beneficial Use on July 5, 1989. An examination indicates that the works have a storage capacity of 6.000 af of water from:

UNNAMED DRAIN

tributary to BOISE RIVER

source, and a water right has been established as follows:

<u>BENEFICIAL USE</u>	<u>PERIOD OF USE</u>	<u>RATE OF DIVERSION</u>	<u>ANNUAL VOLUME</u>
WILDLIFE STORAGE	01/01 to 12/31		6.0 AF

LOCATION OF POINT(S) OF DIVERSION:

NWNW , Sec. 2, Township 04N, Range 04W
CANYON County

PLACE OF USE: WILDLIFE STORAGE

TWN RGE SEC

04N 04W 2

NWNW

CONDITIONS/REMARKS:

1. This water right is appurtenant to the described place of use.
2. This right is subject to all prior water rights and may be forfeited by five years of non-use.
3. Modifications to or variance from this license must be made within the limits of Section 42-222, Idaho Code, or the applicable Idaho law.
4. Use of water under this water right will be regulated by the watermaster of State Water District No. 63.

This license is issued pursuant to the provisions of Section 42-219, Idaho Code. Witness the seal and signature of the Director, affixed at Boise, this 15th day of July, 1992.

ACTION OF THE DIRECTOR, DEPARTMENT OF WATER RESOURCES

This is to certify that I have examined Application for Permit to appropriate the public waters of the State of Idaho No. 63-10608, and said application is hereby APPROVED.

1. Approval of said application is subject to the following limitations and conditions:

a. SUBJECT TO ALL PRIOR WATER RIGHTS.

b. Proof of construction of works and application of water to beneficial use shall be submitted on or before July 1, 19 89.

c. The rate of diversion, if water is to be used for irrigation under this permit, when combined with all other water rights for the same land shall not exceed 0.02 cubic feet per second for each acre of land.

d. The water right acquired under this permit if for hydropower purposes shall be junior and subordinate to all rights to the use of water, other than hydropower, within the State of Idaho that are initiated later in time than the priority of this permit and shall not give rise to any right or claim against any future rights to the use of water, other than hydropower, within the State of Idaho initiated later in time than the priority of this permit.

e. Other:

A measuring device of a type approved by the Department shall be permanently installed and maintained as part of the diverting works.

Use of water under this permit is subject to control by the watermaster of State Water District No. 63, Boise River.

Witness my hand this 14th day of June, 1988.

RE: Request for Amendment of License No. 63-10608

Dear Mr. Clark:

Thank you for the information you supplied to support your request for a re-examination and amendment of licensed right 63-10608. I have reviewed the information and have concluded that your reservoir is off-stream and should have included a flow rate for diversion to storage. However, based on our conversations, I have also concluded that amending your license to add a diversion to storage will not accommodate your current water use needs. A diversion to storage would allow only a brief diversion to fill your reservoir. You have expressed to me that the real need for diverting flow is to run it through the reservoir all year to prevent stagnation in the summer and freezing in the winter, thus providing clean, open, wildlife habitat.

A year-round flow for wildlife purposes cannot be appended to an existing license when the original application did not request one. However, you can file a new application for a year-round diversion through the reservoir for wildlife purposes. The use would be non-consumptive and, therefore, excepted from the Boise River Basin moratorium. Moreover, there are no other appropriations from the drain with priorities after April 4, 1988. Therefore, priority date should not be an issue for you.

I will be happy to work with you to file an application for permit to establish the right to divert a flow for wildlife purposes. Please contact me at 327-7946 for an appointment.

Sincerely,

Shelley Walter Keen
Water Rights Supervisor

RE: Request for Amended License for 63-10608

=====

On March 7, 1995, I received from Blair Clark a written request for a re-examination and amendment of licensed right 63-10608. Mr. Clark is Secretary/Treasurer of the Waterfowl Improvement Association, Inc., the license holder. I am writing this memo to summarize the facts surrounding this request. In my opinion, an amendment not called for in this case. Instead, the Waterfowl Improvement Association, Inc., should file a new application for permit.

Background

License 63-10608 resulted from an application for permit filed on April 4, 1988. The application requested an appropriation from an unnamed drain of 6.0 AFA for wildlife and irrigation storage and wildlife and irrigation from storage. The original application on file includes no reference to diversion to storage, indicating that the plan was for an on-stream storage facility. After a field examination conducted on August 7, 1991, the license was issued in July of 1992 for 6.0 AFA for wildlife storage purposes. The field report did not address diversion to or from storage. The irrigation use was never developed.

Current Issue

When Mr. Clark requested the re-examination, he said that he had expected the license to contain a flow rate as a component of this right. Mr. Clark's expectation was apparently based on two facts. First, he has a copy of the May 12, 1988, New Water Right Filings report, which lists the total appropriation in his application as 6.00 CFS, not 6.00 AFA. Second, Mr. Clark says he was present when the field examination was conducted, and he saw the examiner measure flow into the reservoir from "the ditch".

The flow rate issue was not important, apparently, until a disagreement with the neighbors erupted. The neighbors, located
Memo to File 63-10608

Re: Request for Amended License
April 3, 1995
Page 2

upstream on the source drain, are represented by attorney Patrick Madigan, whose correspondence related to this issue is in the file. The disagreement appears to be a right-of-way or easement issue, not a water right issue, and so is not discussed in detail in this memo.

Analysis

Mr. Clark's request brought to mind a number of questions which I will address one at a time.

First, why did the New Water Rights Listing Report show 6.00 CFS rather than 6.00 AFA? The answer appears to be that it was an unfortunate typographical error. The total diversion rate or volume in a water right listing should summarize the rate or volume appropriated for all the uses. In this case, all the uses were for 6.00 AFA, and none were for a flow rate.

Second, Mr. Clark's reference to the source as a ditch led me to wonder if the source is a ditch or a natural stream. This issue is important not only because it relates to the source of the right, but also because a right for a minimum stream flow into and from a reservoir on a natural stream can only be established through the Water Resources Board. After reviewing the topographic quadrangle, viewing aerial photographs obtained by Mr. Clark, and discussing the question with Mr. Clark and Mr. Madigan, I have concluded that the source is a natural channel which flows all year but which is also maintained as a drain within Drainage District No. 4. The source is not a ditch which allows controlled delivery of water to the reservoir from a canal system.

Third, is the reservoir on-stream or off-stream? The application, exam, and license all appear to indicate an on-stream storage facility. Off-stream facilities require a diversion to storage, but none of the paperwork references a diversion to storage. Mr. Clark even supplied a photocopy of an early draft of the application which has diversion to storage marked in, then crossed out. However, Mr. Clark has also provided copies of aerial photographs and his own 35mm photographs which clearly indicate that the reservoir is off-stream. The regular drain channel completely bypasses the reservoir. The application for permit should have requested a rate for diversion to storage, and the field report should have reported a diversion to storage.

APR 14 1995

Memo to File 63-10608
Re: Request for Amended License
April 3, 1995
Page 3

Merely recognizing a diversion to storage for this appropriation would not, however, reflect Mr. Clark's intentions. A diversion to storage would only allow the reservoir to be filled. Mr. Clark has expressed to me that the real need for flow is to run it through the reservoir all year to prevent stagnation in the summer and freezing in the winter, thus providing clean, open wildlife habitat.

A year-round flow for wildlife purposes cannot be appended to an existing license when the original application did not request one. However, a new application could be filed for the year-round diversion of a flow through the reservoir for wildlife purposes. The use would be non-consumptive and, therefore, excepted from the Boise River Basin moratorium. Moreover, there are no appropriations from the drain with priorities between April 4, 1988, and now. Therefore, priority date should not be an issue for Mr. Clark.

Re: Waterfowl Improvement Association
63-10608

Dear Shelly:

I enclose several further exhibits for your reference.

First of all, I enclose a drawing from Carlyle Briggs, PE/LS, which is a tracing of our aerial photograph of 1992. This shows the elevations and drops of the ditch, and should show once and for all that our pond has nothing to do with our neighbors' "flooding" allegation. Furthermore, the aerial photos show no flooding occurring in 1992. Having walked the entire ditch Saturday and Sunday, I can inform you that the only impediments in the ditch that cause the water to escape and run out is the severe vegetation growth in and around it.

Next are several photos which I took Saturday and Sunday last, while Carlyle Briggs, Kevin Carlson and I were on site. The construction works have not changed whatever since we completed our project, which was before the field inspection.

1. Water exiting Idaho Power culvert into ditch that leads to pond--i.e., from top of IPCO culvert, looking West.
2. Water entering IPCO culvert, looking East.

MAR 24 1995

16. Northeast culvert, nearest channel line. Feeds back into channel.
17. South culvert. Nearest access road into our property.
18. Another angle of Northwest culvert, taken from road going around pond.
19. These two photos show water coming into the pond; photos taken from
20. slightly different angles.
21. Back side of pond, showing pairing birds. We probably saw 15-20 geese in the area, and twice that many ducks. Northeast culvert is to right, Northwest culvert to left. We have about ten goose nesting platforms plus the islands you can see, plus about a dozen wood duck boxes. Ducks nest on the islands and in the channels running out of the culverts.

The running water is necessary for several reasons:

- a. We do not want a stagnant pond. The photos you saw in your field exam show algae growth which impedes the growth of the sago pondweed which we planted and which is a great duck food. Also, it keeps the pond from freezing totally solid in the winter and keeps the water fresh for the birds. This applies at all times of the year. We hunt it, of course, in the fall and winter, but the birds use it year round.
- b. The water flow out of the pond keeps the channels wet, which ducks use as nesting and hiding cover, and pheasants use for cover and moisture.
- c. The original application showed a water flow right application as well as a storage right. This was evidently changed because the department employee who prepared it didn't think it was necessary. However, you can see that the design, configuration and description of the works clearly showed a flow through the pond.
- d. The computer printout which I received from IDWR showed not only a level of 6 af but also a 6 cfs flow. **Again, it was always the plan and design to maintain a flow through the pond and keep the level up, for the reasons we have outlined.**

3. Taking elevation of highest water line east of Idaho Power culvert, adjacent to 2.
4. Taking elevation next to the main diversion, where water is diverted from ditch into pond.
5. Same area as 3, showing water line in summer high water runoff.
6. Water exiting Idaho Power culvert.
7. Panorama of diversion area. Water flows through Idaho Power culvert (immediately to left in photo), down channel, and into pond to left where orange canvas dam is seen. Pond can be seen just over the left-hand tree branch, and diversion structure on far right.
8. Closeup of diversion structure showing channel totally blocked. We can board it totally closed and force entire channel flow through pond.
9. Closeup of diversion structure from opposite angle, closer to diversion ditch into pond.
10. Full flow of channel running through structure.
11. Full flow of channel being diverted into pond.
12. Backside of channel into pond. All water formerly ran through headgate, but as you can see it washed out. If we want to drain the pond, we lower the wheel and use canvas dams on either side, letting all water run through the diversion structure.
13. Diversion structure from front. There is still a slight flow down the channel, which we allow as it feeds the area to the Northwest, which ducks are using as nesting habitat.
14. Northwest outlet, nearest slough and at far end of pond.
15. Exit from 14, showing course of water into ditch, through tree line. This makes a wonderful habitat area for ducks and pheasants. Field with photo number toward top.

e. The field exam report is totally incomplete. The personnel examined the flow into the pond, and each outlet from it. The only change they recommended to me was to delete the irrigation claim, as the weed growth from the neighboring property eliminated our food plots as I explained previously. However, there was never anything mentioned at any time by those personnel or any others with IDWR that we would not have a flow right. I never received a copy of that field report until I ordered one this month.

For the reasons cited here, as well as our prior discussions, I think it is appropriate to consider the pond as including a flow through it, which of course is a nonconsumptive use. In fact, as I stated earlier, it was always considered essential to keep the water flowing out of the pond, as the return flow was required to be sent back through the river. As you can see on the maps, the water flow all does go back to the river (the two culverts on the North back into the main channel, and the South culvert back into the slough).

Incidentally, Mr. Madigan's letter argues that our right did not include a flow right because we asked for a waiver of the Measuring Device requirement. That is simply not true. As my letter indicates, and as the evidence clearly shows, there was simply no need for the measuring device **because all the water in the channel was being put through the pond, and we were the last property on the channel before the river!** Since this was a nonconsumptive use, a measuring device was unnecessary. Having helped a friend obtain his water license for another habitat project, I am aware that a measuring device was not required on his project as it was nonconsumptive.

We do not think that a new application is necessary under the circumstances.

Yours very truly,

D. Blair Clark

ACTION OF THE DIRECTOR, DEPARTMENT OF WATER RESOURCES

This is to certify that I have examined Application for Permit to appropriate the public waters of the State of Idaho No. _____, and said application is hereby _____.

1. Approval of said application is subject to the following limitations and conditions:

a. SUBJECT TO ALL PRIOR WATER RIGHTS.

b. Proof of construction of works and application of water to beneficial use shall be submitted on or before _____, 19 ____.

c. The rate of diversion, if water is to be used for irrigation under this permit, when combined with all other water rights for the same land shall not exceed 0.02 cubic feet per second for each acre of land.

d. The water right acquired under this permit if for hydropower purposes shall be junior and subordinate to all rights to the use of water, other than hydropower, within the State of Idaho that are initiated later in time than the priority of this permit and shall not give rise to any right or claim against any future rights to the use of water, other than hydropower, within the State of Idaho initiated later in time than the priority of this permit.

Re: Water Right License No. 63-10608

Dear Shelley:

I represent holders of water right no. 63-04530, who divert water from the same ditch upon which license no. 63-10608 is located. It has come to our attention that the holder of license no. 63-10608 now claims that IDWR mistakenly failed to include a diversion rate or flow rate as part of the original license. Now the holder requests that the department amend the license to include such a measurement and the right to divert a specific amount of water in addition to the storage of 6 AFA. We submit this letter to you to provide notice of our concern for, and protest of such a request.

As you are aware, this license presently is limited to, and authorizes only the storage of 6 AFA for wildlife purposes. No where in the water right file, which includes this license holder's original permit application, field examination and correspondence, is there any evidence that the holder desired that any diversion rate or flow measurement be associated with the use and the license. In fact, IDWR originally attached to this license the condition that the applicant install and maintain a flow gauge or meter to measure flow. Such a condition would have provided the only evidence of an associated or authorized rate of diversion. The holder, however, successfully plead with and convinced IDWR to remove this condition. Contrary to the license holder's present assertion that IDWR mistakenly failed to include some flow or diversion rate with this license, he clearly intended that this license be limited to the storage of 6 AFA without any reference to a diversion rate or flow.

APR 14 1995

Consequently, the addition of a flow or diversion rate for wildlife purposes at this time constitutes a new use. Such new use requires proper application to the department pursuant to the provisions of the Idaho Code and the department's administrative rules. The license holder's request should not otherwise be allowed to undermine or end-run these requirements. We may not protest the license holder's application for the new use if he submits one. However, as holders of a water right on the same ditch, we believe our right to notice and comment, as provided by the code, may not be denied by such a request. We therefore ask the department to deny the license holder's request that his license now be amended to include a flow rate or the right to divert a specific rate of flow.

Very truly yours,

Patrick D. Madigan

ADDITIONAL INFORMATION: Re: 63-10608 Dear Shelley: As a followup to my fax transmission letter of yesterday, I spent quite a while this morning going through the Aerial Mapping Company files, and found several photos of interest. The first is 1971, which shows the ditch clearly. The second, in 1980, shows the same (with a few changes in the surroundings), while the third, 1992, clearly shows our pond and water course, and verifies that we have an offstream diversion. I should have copies of them Monday of next week. I also found the printout from your computer system for our permit, dated 5-12-88, showing 6 a/f and also 6 cfs. Ms. Skaggs indicated to me the other day when I was in that the computer still shows this. Further, when Ms. West did the examination, I showed her all four outlets. I was advised at the time that the deletion of the irrigation would show that we had a right to keep and maintain 6 a/f, plus allow runoff for the other habitat projects we have. At any rate, thank you for agreeing to do a re-examination of this project. I have been informed that about 2 cfs are running into the pond now, but you probably want to have some device to check that. I am available March 14, 15 or 16 if any of those dates work for you. Please call me so we can confirm a time.

RE: Request for Re-Examination from Blair Clark

=====

Yesterday we received a letter from Blair Clark in which he asks about the appropriation of flows associated with licensed right no. 63-10608. This right was issued to The Waterfowl Improvement Assn Inc, of which Mr. Clark is the Sec./Treas. Right 63-10608 was licensed for 6.0 AF for Wildlife Storage purposes. In response to Mr. Clark's letter, I called him today at 342-4591.

Mr. Clark explained to me that he was under the impression that right 63-10608 would include a flow component. He believes the flow is necessary to maintain water quality in the reservoir. I inspected the file and expressed the following two concerns to Mr. Clark.

1) The Application for Permit in our file shows no request for an appropriation of a natural flow component. The application requests 6.0 AF only for Wildlife/Irrigation Storage and Irrigation/Wildlife from storage. Because all off-stream storage rights must include a flow rate for diversion to storage, this application would have been considered on-stream storage.

2) The appropriation of a flow through an on-stream reservoir for wildlife purposes would create a de facto minimum stream flow appropriation. A minimum stream flow appropriation can only be made by the Water Resource Board.

Mr. Clark responded that he thought his application included a request for a flow right. Moreover, he said that another examination of the diversion works may show that the water is actually stored off-stream.

I told Mr. Clark that we would consider a written request for a re-examination, which he faxed to me this afternoon.

WE ARE TRANSMITTING 1 PAGES (INCLUDING THIS COVER LETTER)

OUR FAX NO. (208) 342-4657

ADDITIONAL INFORMATION: Dear Ms. Skaggs: This letter concerns license 63-10608 which you sent me under your letter of July 20, 1992. Your file on this matter should reflect a field exam which was taken. I don't know who the agent was; the card I was given was for Sarah West, who I believe was an intern. At any rate, the license was for 6 acre feet. We were informed that this allowed us to maintain a level of that amount, since the pond in question is constructed on a drainage ditch. We simply want to insure that we have enough water flow to maintain the pond, since the ditch is an old drain ditch which runs to the Boise River. However, I have been informed that there are no measurements of the water flow in the field exam file; this surprises me because there were some taken at each of our outflows. The outflows are necessary to assure a return flow to the river, to insure a fresh water supply and alleviation of a stagnant situation, and to keep the pond open in the winter for waterfowl. Please advise me as to the Department's position if this license needs to be amended. Also, Gary Spackman told me the other day that he would send me a copy of the field exam report. If he has not done so, would you please send or fax it to me? Thanks.

- S

System Description (continued)

3. Narrative: Description (As operating at time of measurement. Indicate pressure, number of sprinklers, etc.)

System consists of an unnamed drain as a source of water for a storage pond with approx. 2 surface acres. The current pond is the result of increasing the previous seepage pond by building a 4' high dam. A headgate system at the inlet source controls the inflow of water into the pond. The level of the pond is likewise controlled by three culvert-type

H. REMARKS AND OVERLAP REVIEW ANALYSIS

outlets that allow dam boards to be inserted to control the level of water. The pond can be completely drained by closing the headgate valve and opening all outlets. Owner indicated they drained the pond once to twice a year for weed + moss control. Water released from pond flows into Boise River.

Note: irrigation component should be deleted from permit based on owner's confirmation. Surface acreage was determined during exam at the Canyon County ASCS office using a 1991 aerial slide and a digitized planimeter.

I. RECOMMENDATIONS

1. Recommended Amounts

Beneficial Use	Period of Use		Rate of Diversion Q (cfs)	Annual Volume V (afa)
	From	To

Re: Waterfowl Improvement Association, Inc.
Water Right Number 63-10608

Gentlemen:

I received your letter of August 14, 1989, acknowledging receipt of our Proof of Beneficial Use. You indicated that a field examination must be made. The water on this property runs higher in the summer than in the winter and we therefore, would like to get this field inspection completed so we can get our license. Please call so we can make arrangements for the inspection. I realize you are busy this time of year but this matter has been pending for some time.

Yours very truly,

D. Blair Clark

RE: PERMIT NO. 63-10608 PROOF DUE NOTICE

Dear Permit Holder:

One of the conditions of approval of the above referenced water permit was that proof of the extent of your beneficial use must be submitted to this office on or before July 1, 1989. (See last page of your approved permit or your last approved extension request.) Enclosed is a form which when accompanied by the license examination fee or a complete field examination report prepared by a certified water right examiner may be used to submit the required proof.

If you have not fully completed your project, and you or a previous owner of this permit have not received a prior extension of time, you may request an extension of time if the delay is for reasonable cause as provided in Section 42-204, Idaho Code. If you have been prevented from proceeding by a governmental agency or by litigation which might bring title to the water in question, more than one extension of time can be granted. An extension of time request form is enclosed for your convenience.

Either an acceptable proof of beneficial use submittal or an acceptable request for an extension of time must be received by this department on or before the above described proof due date. If neither is received, the department will send you a lapse notice. Within sixty (60) days of the mailing of the lapse notice, the permit will no longer be of any force nor effect.

SINCERELY,

Rita Fleck
Secretary/Records Manager

Mr. Gary Spackman, Supervisor
Water Allocations Section
Department of Water Resources
1301 North Orchard Street
Statehouse Mail
Boise, ID 83720

Dear Mr. Spackman:

I write with reference to the Waterfowl Improvement Association permit number 63-10608 and with reference to my telephone conversation with you of September 7th.

We specifically request the removal of the condition that we install a measuring device as part of our permit. Attached to our application for permit are copies of the location of the premises as well as a description and descriptive map of the pond which was constructed pursuant to this permit. The pond was constructed as a joint venture of the Idaho Fish and Game Department and ourselves for waterfowl habitat. Water flows in through the drain, fills the pond, then exists through a head gate and an overflow pipe at the northwest corner. The water then flows into a slough which is tributary of the Boise River. There are no consumptive uses of water below our project.

Considering the nature of this project and considering that this is a non-consumptive use of water, the Department of Fish and Game and in particular Andy Ogden, the Biologist involved, agree that we should not need a weir or other measuring device as a condition of this permit. We therefor request that the same be waived.

Yours very truly,

D. Blair Clark

Boise, ID 83701

Dear Permit Holder(s):

Enclosed is a copy of your approved Application for Permit. We direct your attention to the conditions of approval on the final page.

Be sure to note the special condition requiring you to install and maintain a measuring device at your point of diversion. We have enclosed a description of the different types of measuring devices accepted by this office.

We have enclosed a form entitled "Instructions for Proof of Beneficial Use". Please read the instructions carefully since you must take further action to develop this permit. Also enclosed for your convenience is the statement of beneficial use that must be submitted when your project is completed.

Sincerely,

GARY SPACKMAN, Supervisor

ADDITIONAL INFORMATION

A hand-drawn map of a coastal area, possibly a bay or inlet, with various numerical annotations and a grid overlay. The map shows a coastline with several points marked by dots and connected by lines. The grid consists of vertical and horizontal lines, some of which are dashed. Numerical values are written in various locations, including along the coastline, within the grid cells, and near specific points. Some values are circled or underlined. The map is oriented with the coastline on the left and right sides, and the grid extending inland. The overall appearance is that of a field sketch or a preliminary map.

Key numerical annotations include:

- Top left: 10.12, 22.88
- Top center: (811) 57.12
- Top right: 39.20, 26.43, 15.40
- Center: 54.70, 17.02, 27.90, 25.60
- Bottom left: 36.50, 46.60, 38.63
- Bottom center: 190 0.8
- Bottom right: 34.50

The map also features a wavy line representing a coastline or boundary, and several vertical lines that may represent roads or property boundaries. The overall style is that of a hand-drawn sketch, with some numbers appearing to be measurements or coordinates.
