January 13, 1967

Dear Water User:

As you are aware a large area in Twin Falls and Cassia Counties was designated as a critical ground water area in 1962. Since that time the State Reclamation Department has entered into a cooperative agreement with the U. S. Geological Survey to study the ground-water resources of the area. That study is now completed, and a report is being prepared. The state reclamation engineer is reviewing the hydrology and water level changes while considering the possibility of modifying the area that is designated as critical and closed to additional water development.

With regard to this the State Reclamation Engineer, R. Keith Higginson, will conduct a public meeting in the Murtaugh High School Auditorium at 7:30 P.M. on January 25, 1967. The locations and amounts of present water rights will be reviewed, and alternatives for modification of the area will be presented. In addition U. S. Geological Survey personnel will be present to relate what is now known of the ground water resources of the area.

Water users are encouraged to participate in the discussion, and all interested parties are urged to attend.

Very truly yours,

Jack A. Barnett

March 22, 1957

Re: Permit Nos. 19678, 21594, 21648 and G-22536

Mr. William Wiedenman
5221 La Jolla Blvd.
La Jolla, California

Dear Mr. Wiedenman:

In compliance with your request as outlined in your letter of March 15, 1957, we have enclosed a sketch map depicting the permit numbers and the land to which the water under each permit is appurtenant. The map is explanatory as the different permits appear in different colors, i.e. Permit No. 19678 is shown in green and Permit No. 25194 shows in blue, etc.

To explain further the water rights as are now appurtenant to the said land according to the permits listed on the sketch map we list the following:

Permit No. 19678 -- is licensed and completed. The permit holder received 2.53 cubic feet per second or 126½ miner's inches which is appurtenant to the NW¼ and the W½NE¼ of Section 33.

Permit No. G-22536--is licensed for 0.96 cubic foot per second or 48 miner's inches, which has been made appurtenant to the SW¼NE¼, S½NW¼ of Section 33.

This gives the applicant a total of 3.49 cubic feet per second appurtenant to the NW¼ and the W½NE¼ of Section 33.

Permit No. 21594-- is for 2.0 cubic feet per second. Completion of works has been made on the permit and a certificate issued but the beneficial use proof has not been made, therefore, a license has not been issued for the N½SW¼, SW¼SW¼ of Section 33.

Permit No. 21648 --is for 2.0 cubic feet per second. Completion of works has been made on the permit and a certificate issued but the beneficial use proof has not been made. Completion of works was made appurtenant to the NE¼SW¼, NW¼SE¼ of Section 33.

This makes a total of 4.0 cubic feet per second which the applicant can obtain for the land located in the S½ of Section 33, upon beneficial use proof.

You will note: there are four wells filed on and the location is shown on the sketch map. We cannot give you the exact amount of water that is being pumped from each well because as yet we do not have that information on

G-22536

record in this department, although, the well located in the SW¹/₄NE¹/₄ (marked in green) of Section 33 is evidently pumping 2.53 cubic feet per second; the well in the SW¹/₄NE¹/₄ (marked in red) is evidently pumping .96 cubic feet per second. 2.53 is shown under Permit No. 19678 and .96 is shown under Permit No. G-22536. The other wells have not been measured by our filed engineer.

I hope this information will be helpful in answering your inquiry.

Re: Permit No. G-22536

Mr. H. H. Fisher of this city has brought to this office your letter of June 2nd with regard to the above numbered permit. We are enclosing herewith our check for \$5.00, your fee for issuance of license on the above permit.

In connection with the above permit Mr. Fisher advises that when your field engineer examined the well covered by said permit he requested Mr. Fisher to obtain and forward to him information with regard to the drilling on the well and also information as to the pumping equipment installed on the well for your records. Complying with that request we wish to advise that the well covered by said permit has installed on it a 50 HP Layne and Bowler oil lubricated pump with 350 feet of 6" column with 12 stages of 10" bowls and 10 feet of 6" suction pipe.

The log obtained from R. T. McClure shows the following formations through which the well was drilled:

5-10 topsoil
10-57 clay and gravel
57-79 black lava
79-143 red clay, gravel, water
143-170 black lava
