Re: Permit No. 47-7041

Harvey Haslip
Castleford,
Idaho 83321

Dear Mr. Haslip:

You have submitted an application to appropriate and store waters of the State of Idaho. As a reminder, I wish to bring to your attention the requirements of Idaho Code 42-1707 concerning the submission of plans and specifications to the Department of Reclamation for approval.

The Code requires that any person, association, or corporation, excepting the U. S. Bureau of Reclamation, who shall desire to construct any dam or dike, for the purpose of storing or appropriating or diverting any of the waters of this state, when the same is to be more than ten feet in height or have a storage capacity of more than one hundred acre-feet, shall submit duplicate plans, drawings, and specifications of the proposed work to the Department of Reclamation for approval. If approval is granted one approved copy of such plan, drawing, or specification will be returned to you.

Also provided in the Code is an inspection clause which requires the Department of Reclamation to inspect or cause to be inspected as often as it deems advisable, any such dam or dike, to be more than twenty feet in height during construction.

The plans and specifications should provide as a minimum the following information:

- A. Drawings
 - 1. Dam profile
 - 2. Spillway profile
 - 3. Outlet work profile
 - 4. General plan view
 - 5. Section of dam or dike
 - 6. Section of spillway
 - 7. Location map
- B. Dimensions and Elevations
 - 1. Conduits and gates, dimensions and elevations
 - 2. Water surface elevations

47 7041

3. Slopes of embankment surface
4. Provide dimensions sufficient to determine if the design is adequate

C. Specifications

Specifications should provide standards of control to assure that construction is accomplished in such a manner as to provide a structure which will perform as designed. Spillway capacities and capacities of all water control structures shall be provided.

The Department of Reclamation purposely does not attempt to prescribe definite criteria for design and construction of dams or dikes. Codes cannot be made uniformly applicable to the widely varying conditions encountered at different dam sites, and such a code could inhibit advancement in the science of dam design and construction. Instead, the Department conducts an independent review of individual plans and specifications for each project, as submitted by the applicant's engineer to insure the use of sound engineering and construction principles.

Though it is not required by law, the Department of Reclamation suggests that you obtain the services of a licensed Professional Engineer to design the required structures and prepare plans and specifications. This will not only protect the public from an unsafe structure, but will also protect your investment by reducing the possibility of failure or damage to other parties.

Sincerely,

A. Kenneth Dunn
Assistant State Reclamation Engineer
