NOTICE OF CORRECTION

NOTICE IS HEREBY GIVEN THAT THE NOTICE OF HEARING FOR APPLICATION FOR MINIMUM STREAMFLOW FOR APPLICATION FOR PERMIT NO. 83-7099 in the name of Idaho Water Resource Board was advertised incorrectly on September 21 & 28, 1989.

The amount and period of use was incorrectly advertised. It should have been 40.0 CFS from July 1 through February 29 and 120.00 CFS from March 1 through June 30.

Part of the place of use was incorrectly described as the confluence of Elk Creek with Deep Creek, located in the SW¼ NE¼, Section 14, T29N, R2E; whereas, correctly it should be the SW¼ NE¼, Section 14, T39N, R2E.

(For additional information concerning the property location, call the Northern Regional Office at 765-4639.)

R. KEITH HIGGINSON, Dir.

NOTICE OF HEARING FOR APPLICATION FOR MINIMUM STREAMFLOW

Notice is hereby given that the Idaho Water Resource Board submitted an application for permit to appropriate water to the Department of Water Resources on February 10, 1989, proposing to appropriate water for a minimum instream flow in Elk Creek, tributary to North Fork of the Clearwater River. The Application is further described as follows:

Application No.: 83-7099
Source: Elk Creek
Proposed Priority: February 10, 1989

Amount and Period of Use: 40.0 cfs from July 1, through February 29. 120.0 cfs from March 1, through June 30.

Purpose of Minimum Flow: Scenic and recreational purposes, fish and wildlife habitat.

Place of Use: That portion of Elk Creek beginning at a point where Elk Creek crosses the north section lines of Section 11, and into the NW1/4NE1/4 of said section, and extending downstream to the confluence of Elk Creek with Deep Creek, located in the SW1/4NE1/4, Section 14, T39N, R2E, B.M., Clearwater County.

The Director of the Department of Water Resources will hold a public hearing regarding the application at Mount Deary Grange, 403 Line Street, Deary, Idaho, on Thursday October 12, 1989. Formal and informal testimony will be taken at 2:00 p.m. Following testimony during the afternoon, the hearing will recess. At 7:00 p.m., the hearing will reconvene, and informal public testimony will be taken. This hearing will be held pursuant to the provisions of Section 42-1503, Idaho Code.

Any party who wishes to formally appear in this proceeding for the purpose of presenting evidence or cross examining witnesses should file a notice of appearance with the director of the Department of Water Resources, Statehouse Mail, 4055 Government Way, Coeur d'Alene, Idaho 83814, five (5) days prior to the hearing. Other parties will be given an opportunity to informally present their views and comments without filing a notice of appearance. Written informal views and comments may also be submitted to the Department of Water Resources prior to the hearing.

If issued, this permit will be subject to all prior water rights.

Affidavit of Publication

STATE OF IDAHO }
COUNTY OF TWIN FALLS } ss.

I, Linda Copps McGuire being first duly sworn upon oath, depose and say that I am Bus. Clerk of the TIMES-NEWS, published daily, at Twin Falls, Idaho, and do solemnly swear that a copy of the notice of advertisement, as per clipping attached, was published in the regular and entire issue of said newspaper, and not in any supplement thereof, for Two consecutive Weeks, commencing with the issue dated September 21, 1989, and ending with the issue dated September 28, 1989.

And I do further certify that said newspaper is a consolidation, effective February 16, 1942, of the Idaho Evening Times, published theretofore daily except Sunday, and the Twin Falls News, published theretofore daily except Monday, both of which newspapers prior to consolidation had been published under said names in said city and county continuously and uninterruptedly during a period of more than twelve consecutive months, and said TIMES-NEWS, since such consolidation, has been published as a daily newspaper except Saturday, until July 31, 1978, at which time said newspaper began daily publication under said name in said city and county continuously and uninterruptedly.

And I further certify that pursuant to Section 60-108 Idaho Code, Thursday of each week has been designated as the day on which legal notice by law or by order of any court of competent jurisdiction within the state of Idaho, to be published weekly, will be published; and that at the head of the editorial column of said combined newspapers, and in each issue thereof, Thursday is announced as the day on which said legal notices will be published.

Notice of Public Meeting

NOTICE IS HEREBY GIVEN that the **IDAHO WATER RESOURCE BOARD** has submitted an Application for Permit to the Department of Water Resources proposing to appropriate water for a minimum instream flow in Elk Creek, a tributary to North Fork Clearwater River. The application is further described as follows:

Application No: 83-7099

Source: Elk Creek

Place of Use: That portion of Elk Creek commencing with the north section line of Section 11, and extending to its confluence with Deep Creek, within Section 11 and 14, T39N, R2E, B.M., Clearwater County.

Amount and Period of Use: 40 cfs from July 1, through February 29. 120 cfs from March 1 through June 30.

Purpose of Minimum Instream Flow: Scenic and recreational purposes. The minimum streamflow will provide flushing flow for recruitment of spawning gravels and sediment removal.

The Idaho Water Resource Board will hold a public meeting on the application on June 21, 1989, at 7:00 p.m. in the Gold Room of the University of Idaho Student Union Building (6th and Beacon Streets in Moscow, Id.). The purpose of the meeting is to provide more information about the application to the public and to gather information on public support for the application.

GENE M. GRAY, CHAIRMAN

Travel Journal

HUCKLEBERRY HEAVEN

by Bill London

Begin with hundreds of square miles of Idaho forest, all open for hiking and camping. Add a village in the middle of that backcountry, at the end of a state highway–a village barely big enough for a stop sign and certainly much too slow for a stop signal. Drop in an unpretentious family-run resort hotel where the nightlife revolves around the fireplace and the hot tub. Now stir in a handful of unique attractions, like the biggest tree east of the Cascades and the tallest waterfall in Northern Idaho. The resulting prescription is just what any wise physician would order: a naturally-relaxing vacation, a comfortable destination, the town of Elk River, Idaho, population 180.

After the last mill closed down there in 1980, yet another timber town faced what could charitably be called an uncertain future. But mostly due to the enterprising new owners of the town's only hotel, and the mini-infusion of visitor dollars they've created, Elk River's economy continues to exist.

"We've built our business on keeping people comfortable," explained Andre Molsee, one of the new owners of Huckleberry Heaven Lodge, Elk River's finest. "On vacation, when people are roughing it in Idaho, they just won't settle for a buggy old cabin without a good hot shower–and I don't blame them, I won't settle for that either."

So what Huckleberry Heaven offers is warm, family-style accommodations, clean and pleasant, unpretentious and comfortable. In the main lodge, upstairs, the new owners remodeled, adding wood panelling and liberal doses of appropriate Western art on the walls. They created seven bunkhouse rooms with space for up to eight

Illustration: Heidi Pesky

beds in each. Those rooms provide inexpensive yet totally adequate sleeping space. All the rooms have access to a large common living room–with a fireplace, of course, for fall and winter evenings–kitchen, the hot tub, and the bathrooms. For those who prefer privacy, there's the Loft Room, Huckleberry Heaven's premier suite, complete with its own balcony, fireplace and bath. Even the Loft Room is within budget for most vacationers–$39.50 on weekdays, $44.50 on weekends.

Huckleberry Heaven recently expanded, adding the adjacent apartment building to its modest accommodations empire. The apartments have been remodeled into eight condominium-style suites, each with private kitchen and bath, and from one to three bedrooms. The suites are spacious, modern and pleasant; the only evidence of their rustic location is the forested mountains out the window.

Even with all this private kitchen space available, no one really has to spend their vacation cooking. For all their guests, the lodge offers the option of family-style meals served upstairs in the main kitchen/dining area. About three-quarters of their visitors choose to eat those prepared meals, and for good reason–it's unpretentious cooking at its finest, all you can eat, and heavy on the home-made breads and desserts.

But the lodge offers its visitors more than just good food and a clean bed. In the fall they sponsor guided big game hunts and fishing expeditions, and all winter serve as a cross-country ski and snowmobile center. Huckleberry Heaven is open year round, and the new managers are ready to provide whatever their guests need–from customized guided tours to hayrides to catered meals.

However, Huckleberry Heaven is not the only option for dining and accommodations in Elk River. With two other cafe/taverns in town and dozens of campsites and RV hookup spaces in the immediate vicinity, there are choices enough for all but the hardest-core luxury-seekers.

For Elk River visitors the available choices extend far beyond the difficult dilemma of choosing between huckleberry pie and huckleberry donuts for dessert. The town is surrounded by some extraordinary outdoor attractions.

Of all those sites the most awesome is the Big Tree. Only 10 miles north of Elk River, this giant western red cedar–more than 18 feet in diameter, taller than a 15-story building, and at least 3,000 years old–is the largest tree of any species in North America east of the Cascades. Until 1979, the huge

Firm accuses Forest Service of delaying dam

The Associated Press

MOSCOW — The U.S. Forest Service is dragging its feet in reviewing a new plan to construct a dam at Elk Creek Falls near Elk River, developers of the project say.

Leaders of Hy-Tech Inc. of Lewiston maintain no public hearings are needed before construction begins on the redesigned project, which includes tunnelling through one of the basalt cliffs rimming the falls to divert water to a powerhouse near the base of the cascade.

But Clearwater National Forest officials say they are waiting for further information from the Federal Energy Regulatory Commission, which recently reversed its denial of Hy-Tech's license application for the plan to divert water from above the waterfalls for power production.

Palouse District Ranger Richard Hodge says the Forest Service and the public need more facts on the changes from the original project. Responding to public opposition to altering the popular scenic area, the Forest Service had originally recommended the project not be authorized by the federal commission.

"We're still emphasizing the fact that public acceptance is the one key factor," Hodge said. "I think they have to have a public hearing because the project has changed considerably and my bet is, a lot of the people who are interested are not aware of it."

But Danny Radakovich, a Lewiston attorney and spokesman for Hy-Tech, said the firm has been frustrated by the lack of action shown by the Forest Service.

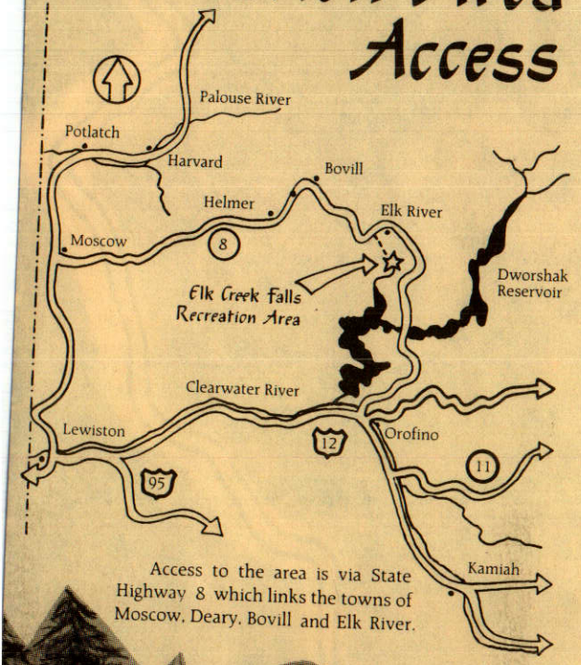

"It's irritating, because we get the impression they're stalling," Radakovich said this week.

"Why can't we move ahead without another public hearing?" asked Radakovich. "Why is a public hearing needed when the changes are changes that make the project less and less intrusive on the environment? We really can't understand why limiting the hours of operation would require a public hearing."

But Hodge notes the changes to the Elk Creek Falls proposal include more than just hours of operation. Radakovich says Hy-Tech has totally redesigned the project plans, including placing the penstock in an underground tunnel. The penstock is a five-foot diameter pipe that carries water from atop the falls to a turbine generator in an adjacent powerhouse.

RECEIVED JUN 2 1988

Elk Creek Falls Recreation Area Access

Access to the area is via State Highway 8 which links the towns of Moscow, Deary, Bovill and Elk River.

Warning:

Use caution when traversing trails on steep slopes. Please stay on trail to avoid damage to fragile soils.

Remember: Pack it in, pack it out!

...the history

Near the turn of the century, the area around Elk Creek Falls was settled by homesteaders. Under the Homestead Act of 1862, any American citizen or person in the process of becoming a naturalized citizen could obtain 160 acres of government land by paying only a registration fee. Before paying the fee though, the settler had to live on the land for five years, making improvements on it (usually the construction of a house, a barn and other outbuildings) and begin actual cultivation. As one farmer put it, "the government bet us 160 acres against five years of our lives that we could not stick it out".

In general, homesteading in the Palouse region proceeded from west to east. The Moscow, Genesee and Palouse areas were first settled in the 1870's, Deary and Avon in the 1880's, and the areas south of Bovill and Elk River between 1890 and 1920. In the Elk Creek Falls area, several homestead patents were issued between 1905 and 1913. One of the earliest was Peter Skjarve on May 11, 1905. On the trail to the Lower Falls you will pass by the ruins of his early homestead. You will also pass by the site of the Elk Falls one room schoolhouse built for the children of these early Elk Falls homesteaders.

While the Elk Falls area once supported many immigrant families seeking a new beginning, scarcely little is known about this new settlement. Much of its history must be pieced together through early newspapers, historical accounts of early residents of Elk River, and through the study of the actual remains of the sites. While we do encourage you to explore this history, we ask that you do not disturb or remove any artifacts or climb on any of the cabin remains. Please leave the area exactly as you find it so that others may also share and enjoy this history. If you do notice any vandalism, theft or unauthorized digging in the area, please report it to the Palouse District Ranger at Potlatch, 208-875-1131.

As one farmer put it, "the government bet us 160 acres against five years of our lives that we could not stick it out".

JUN 2 8 1990

Elk Creek Falls Recreation Area

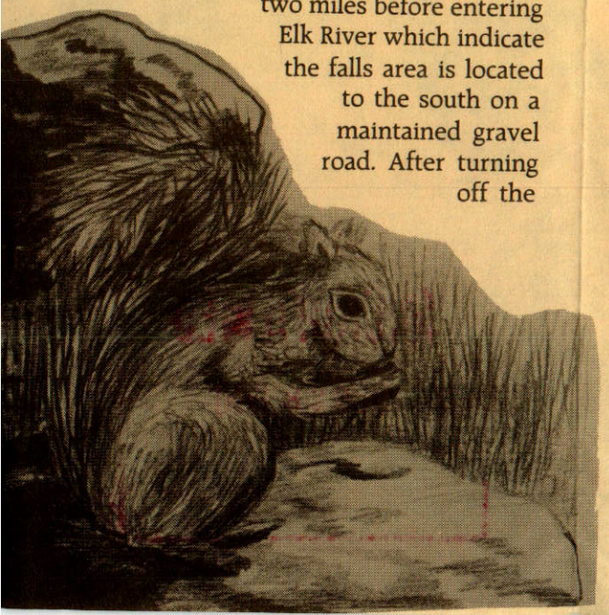

Clearwater National Forest

Welcome

The Elk Creek Falls Recreation Area is one of northern Idaho's unique natural areas. The falls is among the most scenic in the northwest, with a setting which includes a deeply dissected gorge, numerous cascades with natural pools, lush coniferous forests, and impressive vistas.

Located on Elk Creek, approximately 3 miles south of the town of Elk River, the area has been set aside for semi-primitive, non-motorized recreation activities. A recently improved trail system, built with the help of volunteers, includes several overlooks which not only give the viewer a good look at the falls themselves, but of the surrounding landscapes as well.

Access to the area is via State Highway 8 which links the towns of Moscow, Deary, Bovill and Elk River. A traveller heading east on this route would see signs located approximately two miles before entering Elk River which indicate the falls area is located to the south on a maintained gravel road. After turning off the highway, it is approximately 1½ miles to a parking area located at the edge of the recreation area.

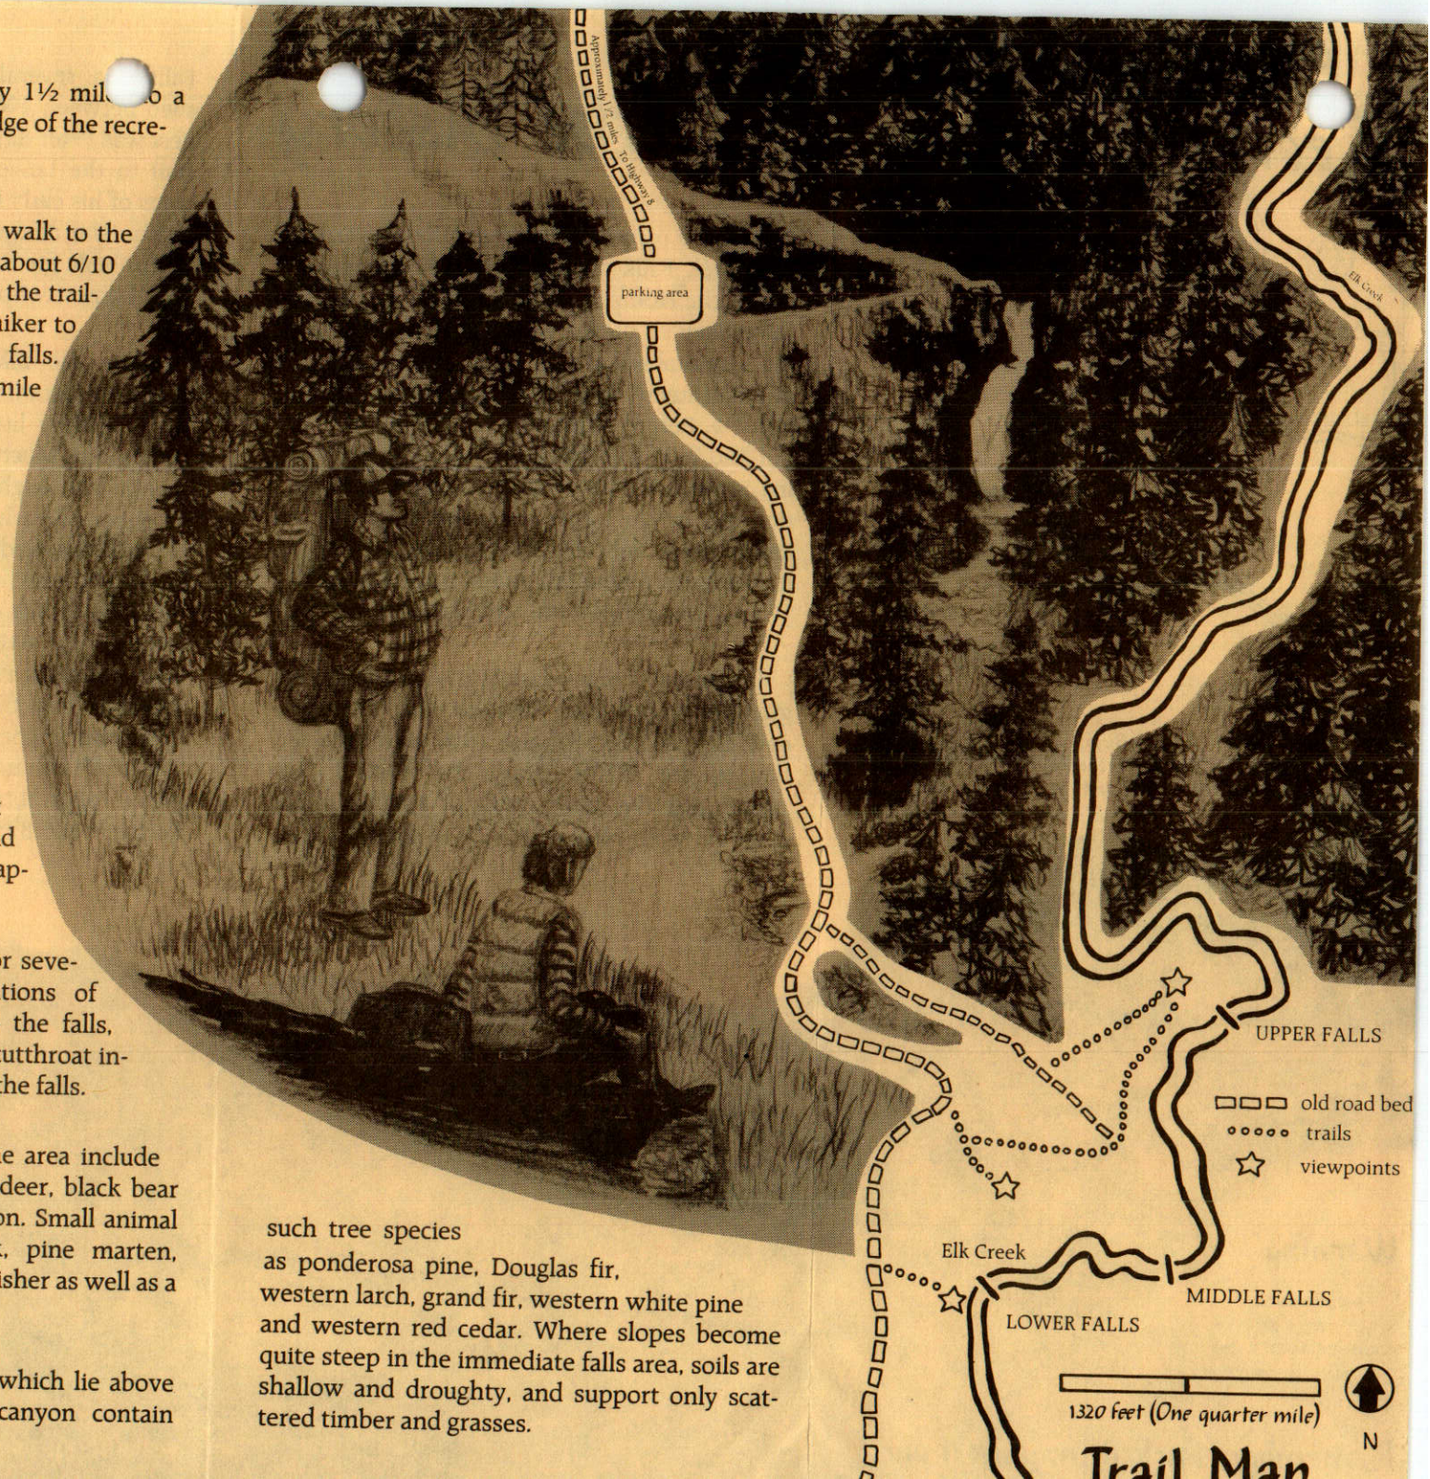

From the parking lot, the walk to the trailhead is a pleasant one of about 6/10 mile along an old roadbed. At the trailhead are signs directing the hiker to the upper, middle or lower falls. Distances range from 3/10 mile to 6/10 mile.

The total height of the falls is approximately 300 feet, with the middle falls being the highest at about 70 feet, with lower falls having a drop of nearly 50 feet, and the upper falls at about 20 feet. The geologic structures in the immediate environment of Elk Creek consist of distinct basalt columns, and help contribute to the unique appearance of the falls.

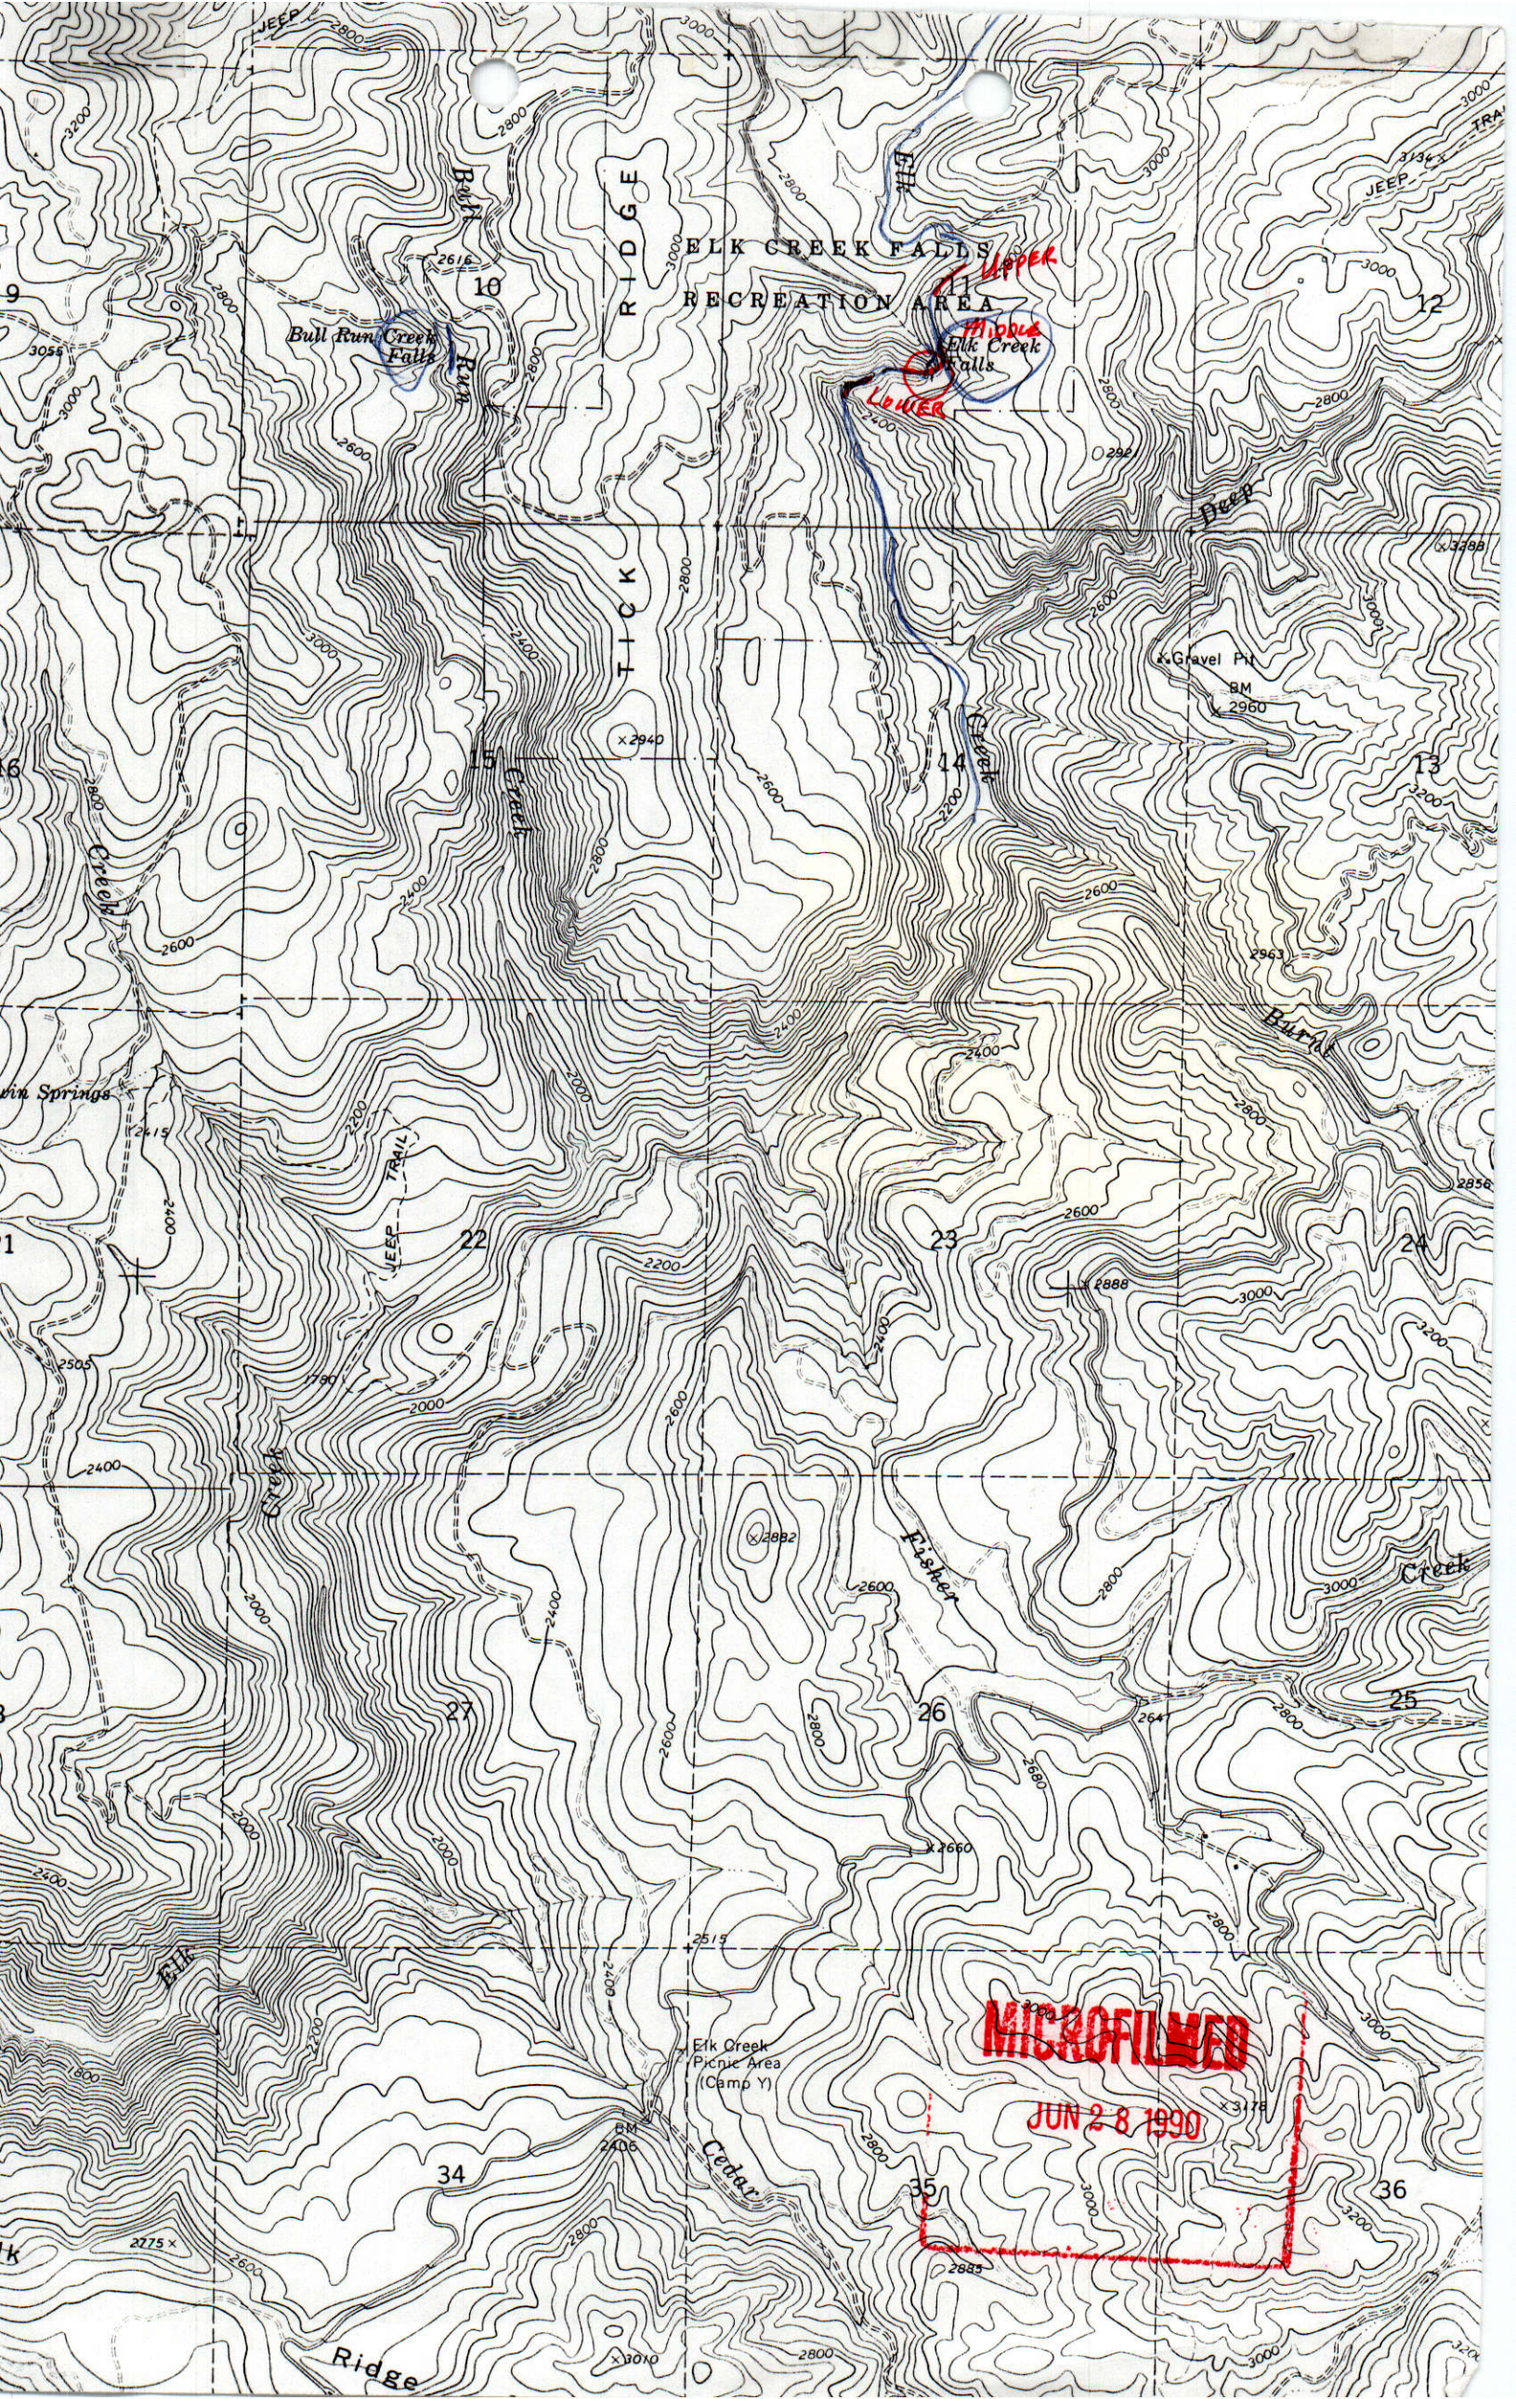

Elk Creek itself is habitat for several species of trout. Populations of brook trout are found above the falls, while rainbow and westslope cutthroat inhabit the lower reaches below the falls.

Wildlife species found in the area include such big game species as elk, deer, black bear and an occasional mountain lion. Small animal species include grouse, mink, pine marten, muskrat, wolverine, otter and fisher as well as a variety of non-game birds.

The heavily timbered lands which lie above the steeply dissected basalt canyon contain such tree species as ponderosa pine, Douglas fir, western larch, grand fir, western white pine and western red cedar. Where slopes become quite steep in the immediate falls area, soils are shallow and droughty, and support only scattered timber and grasses.

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES
REQUEST FOR EXTENSION OF TIME
TO PROVIDE ADDITIONAL TIME IN WHICH TO SUBMIT PROOF OF BENEFICIAL USE FOR A WATER RIGHT PERMIT

The Idaho Department of Water Resources will consider this form as a request that the permit holder(s) be granted an additional period of time under the provisions of Section 42-204, Idaho Code in which to complete development of a water right.

Permit No. 83-07ø099

Name(s) of Permit Holder: IDAHO WATER RESOURCE BOARD

Address: 1301 N. Orchard Street City Boise State ID Zip 83706

Telephone No. (208) 327-7900 Date Proof is Due: 4/1/2000

Describe what work has been completed toward the development of this water right:
(This must be filled out! If no work has been completed, show "none".)

Some data has been retrieved from the USDA Forest Service to help substantiate the proof of beneficial use. Staff has also met with representatives from Idaho Department of Fish and Game, Idaho Dept. of Parks and Recreation and Idaho Office of the Attorney General. However, no approved process for making this beneficial use has been approved by the State of Idaho at this time. Costing $ _____

The permit holder(s) has been unable to complete the remainder of the work for the following reasons:

Due to pending litigation between the USDA Forest Service and the State of Idaho, no proof of beneficial use can be made at this time.

Permit holder(s) request an extension to April 1, 2005.

Clyde Ross
(Signature)*

**If other than permit holder, Power of Attorney must be supplied.*

ACTION OF THE DEPARTMENT OF WATER RESOURCES

IT IS HEREBY ORDERED that the above request for extension of time be APPROVED and the time within which to submit proof of beneficial use is extended to April 1, 2005.

Signed this 21st day of March, 20 00.

PROOF DUE NOTICE

RE: PERMIT NO. 83-07099

Dear Permit Holder:

One of the conditions of approval of the above referenced water permit was that proof of the extent of your beneficial use must be submitted to this office on or before April 1, 1995. (See last page of your approved permit or your last approved extension request.) Enclosed is a form which when accompanied by the license examination fee or a complete field examination report prepared by a certified water right examiner may be used to submit the required proof.

If you have not fully completed your project, and you or a previous owner of this permit have not received a prior extension of time, you may request an extension of time if the delay is for reasonable cause as provided in Section 42-204, Idaho Code. If you have been prevented from proceeding by a governmental agency or by litigation which might bring title to the water in question, more than one extension of time can be granted. An extension of time request form is enclosed for your convenience.

Either an acceptable proof of beneficial use submittal or an acceptable request for an extension of time must be received by this department on or before the above described proof due date. If neither is received, the department will send you a lapse notice. Within sixty (60) days of the mailing of the lapse notice, the permit will no longer be of any force nor effect.

SINCERELY,

BEFORE THE DIRECTOR OF THE DEPARTMENT

OF WATER RESOURCES OF THE

STATE OF IDAHO

IN THE MATTER OF APPLICATION FOR PERMIT NO. 83-7099 OM THE NAME OF THE IDAHO WATER RESOURCE BOARD TO ESTABLISH A MINIMUM STREAMFLOW IN ELK CREEK

ORDER ISSUING PROPOSED MEMORANDUM DECISION

R. Keith Higginson, Director of the Department of Water Resources, having reviewed the attached proposed decision prepared by this appointee, Gary Spackman, who conducted the hearing or who has read the record in this case, hereby approves the same as a proposed decision pursuant to Idaho Code, Sec. 67-5211.

Each party to these proceedings who appeared at the hearing is given the opportunity, pursuant to Idaho Code, Sec. 42-1701A and 67-5211, to file exceptions to the proposed decision and to present briefs and oral arguments. If no timely and proper exceptions are received, an order by the Director will be entered adopting the proposed decision as his final decision.

I.
EXCEPTIONS

A. To be considered by the Director, exceptions must:

1. be received by the Director on or before the 15th day following the day of service of this Order and the proposed decision,

2. specifically identify the portions of the proposed decision to which exceptions are made and specifically state the grounds for those exceptions, and

3. be sent to each of the parties who appeared or their attorneys.

II.
BRIEFS

A. Any briefs in support of exceptions to the proposed decision shall be filed with the Director at the same time that party's exceptions are filed with the Director.

B. All response briefs to the exceptions must be filed with the Director within 15 days after the exceptions were served upon the responding party.

MICROFILMED

JUN 28 1990

III.

A. No oral arguments before the Director on the proposed decision will be held unless specifically requested by a party filing exceptions to the proposed decision and unless that request is filed with the Director concurrently with the filing of that party's exception.

B. If oral arguments have been properly requested by a party filing exceptions, any other party, upon reasonable notice to the Director, shall have the right to present oral argument in response to the exceptions filed.

C. Oral arguments before the Director on exceptions to the proposed decision shall be heard at the discretion of the Director, pursuant to Idaho Code, Sec. 42-1701A. If oral agruments are to be heard, the Director will, within a reasonable time, notify each party of the place, date and hour the oral arguments will take place and of the period of time allocated for the arguments of this case. Unless the Director orders otherwise, all oral arguments shall be heard in Boise, Idaho.

IV.
CERTIFICATE OF SERVICE

All exceptions, briefs, requests for oral argument and other matters filed with the Director in connection with the proposed decision shall be served on all other parties to these proceedings in accordance with Rule 7.2.

V.
FINAL DECISION

Following the submission of all exceptions, briefs and oral arguments, if they are heard, the Director shall issue a final decision adopting, modifying or rejecting and replacing the proposed decision. Copies of the decision and order shall be served on all parties.

Dated this 5th day of December, 19 89.

R. KEITH HIGGINSON
Director

MICROFILMED
JUN 2 8 1990

BEFORE THE DIRECTOR OF THE DEPARTMENT OF WATER RESOURCES

OF THE

STATE OF IDAHO

IN THE MATTER OF APPLICATION FOR PERMIT NO. 83-7099 IN THE NAME OF THE IDAHO WATER RESOURCE BOARD TO ESTABLISH A MINIMUM STREAMFLOW IN ELK CREEK	PROPOSED MEMORANDUM DECISION AND ORDER

On February 10, 1989, the Idaho Water Resource Board (Board) filed with the Idaho Department of Water Resources (Department) an application for permit to establish a minimum streamflow on Elk Creek, tributary to the North Fork of the Clearwater River, located in Clearwater County, Idaho. The application was filed in accordance with the provisions of Chapter 15, Title 42, Idaho Code.

A public meeting was held by the Board in Moscow, Idaho, on June 21, 1989, for the purpose of determining the local public interest in the application. Following the local public information meeting, the Board requested the Director of the Department to proceed with administrative action of the application.

MICROFILMED
JUN 28 1990

Notice describing the proposed application and setting the time and place for the required hearing was published on September 21 and 28, 1989, in The Clearwater Tribune, The Lewiston Morning Tribune, The Idaho Statesman, Times News, and

The Post-Register. The public hearing was held at the Deary Grange, Deary, Idaho, on October 12, 1989. Notice was also mailed to interested parties and legislators. Written notice was mailed to Hy-Tech Co., the applicant for a hydropower project proposed within the same stream reach. Verbal notice of the hearing was also given to Richard A. Sigismonti, a principal in Hy-Tech Co., approximately two weeks prior to the hearing.

Parties appearing in formal capacity included the Board, the Idaho Department of Parks and Recreation (Parks and Recreation), C.C. Warnick, Marla Schwartz, and Rose Conner, who represented the City of Elk River.

Based upon the record and information contained in the department files, and upon his understanding of the law, the hearing officer, as a representative of the Director, finds, concludes, and orders as follows:

FINDINGS OF FACT

1. Application for permit no. 83-7099 proposes to appropriate a minimum streamflow in a reach of Elk Creek beginning at the north section line of Section 11, T39N, R2E, B.M., and extending downstream to the confluence of Deep Creek with Elk Creek. The application located the confluence of Deep Creek and Elk Creek in the SE1/4NW1/4, Section 14, T39N, R2E, B.M., Clearwater County. Because of close proximity of the confluence to a nearby quarter section line, Department personnel later determined that the confluence was located in SW1/4NE1/4, Section 14, T39N, R2E, and the application was changed. The application proposes a flow rate of 40.0 cfs from

MICROFILMED
JUN 28 1990

July 1 through February 29, and 120.0 cfs from March 1 through June 30.

2. The purpose of the minimum streamflow application is to maintain scenic and recreational values in the area of Elk Creek Falls, and also to provide a flow for recruitment of spawning gravels and sediment removal downstream.

3. Streamflows were monitored by the U.S. Forest Service beginning in October 1980, and extending through at least 1988. The streamflow gauge was located above the confluence of Partridge Creek and Elk Creek.

4. The geographic area draining to Elk Creek above the Forest Service streamflow gauge is 34.4 square miles. The total geographic area draining to Elk Creek above Elk Creek Falls is 45.2 square miles. Water draining from 10.8 square miles and entering Elk Creek downstream from the USFS streamflow gauge would increase the flows in Elk Creek and at Elk Creek Falls over the measured Forest Service streamflow gauge values. Most of these increased flows are contributed by Partridge Creek.

5. Straight-line correlation between drainage area and streamflow would result in an increased flow of 24% between the Forest Service streamflow gauge and Elk Creek Falls.

6. Board Exhibit #7 is a copy of the flow data gathered by the Forest Service. The tabulation labeled as Attachment One, and appended hereto, is a summary of monthly mean flows for water years 1981 through 1988, and an average of the mean flow rates for each month.

MICROFILMED
JUN 2 8 1990

7. The tabulation indicates that Elk Creek flows exceed 120 cfs more than half the time during the months of April and May, but less than half the time during the months of March and June. The individual record shows, however, that flows exceed 120 cfs on some days during the months of March through June for every year of record.

8. The tabulation also indicates that flows in Elk Creek exceed 40 cfs more than half the time during the months of July, November, December, January and February, but less than half the time during the months of August, September and October. The data show, however, that flows in excess of 40 cfs have been recorded during the months of August, September and October in most of the years of record.

9. The recorded flows in Elk Creek at the USFS gauging station are conservative because they do not include additional water contributed to Elk Creek between the gauge and Elk Creek Falls.

10. Data submitted by C.C. Warnick indicates that the flows sought may not be flowing in the creek more than 50% of the time.

11. During the summer of 1984, John Edson weekly estimated flows just above the falls by measuring the surface velocity and the stream cross section, and multiplying the two measurements to obtain flow. Edson's estimates show that 40 cfs were usually flowing in Elk Creek in the area of the falls during the summer of 1984.

12. The number of visitors to Elk Creek Fa[illegible] approximately 5,000 per year.

MICROFILMED
JUN 2 8 1990

13. The number of visitors to Elk Creek Falls is increasing annually.

14. The city of Elk River has determined that tourism is important to its economic future. The Elk River Recreation District has been formed under state law to foster tourism. Elk Creek Falls is a focal point for the development of the tourist industry in the vicinity of the City of Elk River.

15. While it is difficult to determine the flow below which the reduction would make the falls aesthetically unacceptable, testimony indicates that 40 cfs is not the optimum flow. Marla Schwartz testified that 40 cfs is a sufficient flow to maintain an "awe factor" associated with the falls. Mr. Edson testified that at a flow of 40 cfs or above, the water over the falls roars, and creates mists and rainbows not present at lower flows. A flow less than 40 cfs severely diminishes the value of the falls.

16. Bert Bowler, employed by Idaho Dept. of Fish and Game (Fish & Game), testified that a flow of 120 cfs from March 1 through June 30 would "likely" recruit gravels for downstream spawning.

17. Bowler also testified that the segment of Elk Creek from Elk Creek Falls to Dworshak Reservoir is used as a spawning stream for fish, and that the removal of sediments and recruitment of gravel through the minimum flow reach is important for the maintenance of spawning habitat.

18. Claim no. 83-04186, in the name of the City of Elk River, claims a right to use 6.0 cfs of water from Elk Creek for

MICROFILMED
JUN 26 1990

municipal purposes. The water is used primarily for fire protection. The diversion is located upstream of the minimum flow reach.

19. Fish and Game has a right to divert 25.0 cfs from Elk Creek for wildlife purposes under right no. 83-2015. Fish & Game also owns license no. 83-02023, which authorizes storage of 915 acre-feet. These two rights are associated with each other and represent and authorize storage of water in a reservoir near the City of Elk River. The rights authorize non-consumptive use for wildlife purposes. The reservoir is located upstream of the minimum flow reach.

20. Potlatch Lumber Co. owns license no. 83-2003, which authorizes diversion of 25.0 cfs for maintenance of a reservoir to store logs. This reservoir appears to be the same reservoir used by Fish & Game for storage. The Potlatch Lumber right is also non-consumptive.

21. Application to appropriate water no. 83-7060, in the name of Hy-Tech Co., proposes diversion of 240.0 cfs for power purposes. If approved as filed, the application would significantly affect the minimum streamflow requested in this filing, since its date of priority predates the filing of this minimum streamflow application.

CONCLUSIONS OF LAW

1. Idaho Code § 42-1501 provides that streamflow preservation for the protection of aesthetics and recreational uses, and fish and wildlife habitat, [illegible] pursuant to this

MICROFILMED
JUN 28 1990

statute, is in the public interest and is declared to be of beneficial use of such water.

2. Idaho Code § 42-1503 sets forth the criteria to be considered by the Department in reviewing an application for minimum streamflow:

> Upon the conclusion of the hearings and completion of any investigation conducted by the director, he shall enter his findings in writing approving the application in whole, or in part, or upon conditions or rejecting said application. Approval of any such application must be based upon a finding that such appropriation of minimum streamflow:
>
> (a) will not interfere with any vested water right, permit, or water right application with priority of right date earlier than the date of receipt in the office of the director of a complete application for appropriation of minimum streamflow filed under the provisions of this act;
>
> (b) is in the public, as opposed to the private, interest;
>
> (c) is necessary for the preservation of fish and wildlife habitat, aquatic life, recreation, aesthetic beauty, navigation, transportation, or water quality of the stream;
>
> (d) is the minimum flow or lake level and not the ideal or most desirable flow or lake level; and,
>
> (e) is capable of being maintained as evidenced by records of streamflows and water levels and the existing and future establishment of necessary gauging stations and bench marks.

3. Any right to be acquired under this application for instream non-consumptive use is subject to all vested water rights, permits or water right applications having dates of priority earlier than February 10, 1989.

4. The proposed minimum streamflow appropriation is necessary to preserve aesthetics and recreational uses, and may be necessary to provide for recruitment of gravels for fish habitat in Elk Creek.

MICROFILMED
JUN 28 1990

5. The minimum streamflow is in the interest of the public as opposed to the private interest. Specifically, this minimum streamflow is essential for the economic well being of the City of Elk River, and of the area within the Elk River Recreation District.

6. A flow rate of 40 cfs from January 1 through December 31 is a true minimum flow rate, and is not the optimum flow rate for full preservation of the aesthetics and recreational use. It is possible that a flow rate of 120 cfs from March 1 through June 30 is a minimum flow for recruitment of spawning gravels, but the testimony only established that the flow would "likely" recruit gravel. The minimum duration of the flow needed for recruitment was also not clearly established. The minimum flow for recruitment, not to exceed 120 cfs, must be further defined.

7. Some controversy arose during the minimum streamflow hearing about what percentage of time the water sought for minimum streamflow must be flowing in the stream before it is capable of being maintained.

8. There are no rules and regulations that define when a minimum streamflow is capable of being maintained, nor has the Department issued any policies that address the maintenance of flow question.

9. Idaho Code § 42-203A, which governs appropriation of water for purposes other than minimum streamflows, requires that the Department consider whether water is available for appropriation.

MICROFILMED
JUN 2 8 1990

10. In the past, the Department has approved applications to appropriate water when the applicant has shown that water in excess of the amount sought to be appropriated is available for diversion in any given year, even though it may not be available for diversion in every year, and even though the water sought to be appropriated is never available for diversion during the entire irrigation season. The reason for this philosophy is that the additional water sought to be appropriated is available for a short period of time during some years, and should, if possible, be beneficially used.

11. Each of the criteria in Idaho Code § 42-1503 should also be considered in light of other uses on the stream, the use that is proposed by the minimum flow application and the benefits the minimum streamflow would provide. The criteria may be applied strictly or liberally, depending on the facts presented.

12. For purposes of this application, the Department holds that there is sufficient information to show that 40.0 cfs is capable of being maintained from July 1 through February 28, and 120.0 cfs is capable of being maintained from March 1 through June 30. This decision regarding maintenance is not based on percentage of time when the flow is exceeded. Rather, the decision is based on the fact that the flow rates sought have been maintained in most years on some days during each of the months for which the flows are requested. In addition, the flows of Partridge Creek and other flows enter the stream below the USFS streamflow gauge increase the flows in Elk Creek above what has been recorded. Testimony supports a conclusion that

MICROFILMED
JUN 28 1990

flows sought are maintainable for sufficient periods of time to justify approval for the purposes requested.

13. Approval of this minimum streamflow should specifically be conditioned to allow the maintenance of the requested amount or whatever lesser amount is flowing in the stream.

14. The Director of the Department of Water Resources has considerable flexibility and authority to grant appropriations subject to future appropriations for uses which the public interest may show to be of greater importance. Shokal v. Dunn, 109 Idaho 330, 337, 707 P. 2d 441 (1985).

15. A perpetual commitment of a significant amount of water from Elk Creek for minimum streamflow without a workable method of changing the terms of the use could at some future date adversely affect the public interest.

ORDER

IT IS HEREBY ORDERED that application for permit no. 83-7099 is APPROVED subject to the following conditions:

1. Use of water under this permit shall recognize and allow the continued beneficial diversion of water under any prior existing water right established by diversion and application to beneficial use or by an application, permit, or license on file issued by the Director under provisions of Chapter 2, Title 42, Idaho Code, with the priority of the water right dated earlier than February 10, 1989, the priority date of this permit.

2. The use of the water under this permit shall be non-consumptive.

MICROFILMED

JUN 2 8 1990

3. Upon the future finding and order of the Director that gauging stations are required to maintain the approved minimum flow on Elk Creek, such measuring devices shall be permanently installed as specified by the Department.

4. This minimum streamflow is limited to a flow rate of 40 cfs from January 1 through December 31 for aesthetics and recreational purposes. A flow of 120 cfs from March 1 through June 30 will "likely" recruit spawning gravel, but whether the flow is the minimum flow and whether the duration must extend for three months are questions that must be further clarified. The applicant, in cooperation with the requesting agency, must submit data with the proof of beneficial use establishing the flow and duration of flow necessary for adequate recruitment of gravel and sediment removal.

5. Proof of instream beneficial use of the minimum streamflow appropriation shall be submitted to the Department within five (5) years after the permit approval is finally effective. Proof shall include: (1) Additional flow data showing that the permitted flows are capable of being maintained, and (2) Evidence establishing that 120 cfs or some lesser number is a minimum flow and that a flow duration of March 1 through June 30 is necessary for recruitment of spawning gravels and removal of sediments.

6. The Director retains jurisdiction to review and amend any and all parameters of this permit and subsequent license. Any person seeking review and amendment of the permit or license shall file a request with the Board, which request shall include

MICROFILMED
JUN 2 8 1990

the amendment sought, the reasons for the amendment, and a statement of the change in circumstances since the permit or license was issued or last reviewed that merit a review of the permit or license. A copy of the petition shall be served upon the Director of the Department of Water Resources. The Board may petition the Director for an amendment to the permit or license. The petition must set forth any significant change in circumstances and evidence of public interest supporting the proposed amendment. The Director will notify the general public and specific persons or parties known to be interested in the proposed change, and conduct a hearing for the purpose of determining whether the permit or subsequent license should be amended in the public interest. The burden of proof at the hearing shall be upon the person or party seeking the amendment to establish that amendment of the permit or license would be in the public interest.

Dated this 5th day of December, 1989.

GARY SRACKMAN,
Hearing Officer
Department of Water Resources

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES
APPLICATION FOR PERMIT

To appropriate the public waters of the State of Idaho

Department of Water Resources

1. Name of applicant Idaho Water Resource Board Phone 334-4440

   Post office address Statehouse Mail, Boise, ID 83720

2. Source of water supply Elk Creek which is a tributary of N. Fork Clearwater

3. Location of ~~point of diversion is~~ minimum streamflow reach: Beginning in the NW ¼ of NW ¼ of NE ¼, Govt. Lot ---------

   Sec. 11 Township 39N Range 2E B.M. Clearwater County; additional ~~points of diversion if any~~: and extending downstream to the confluence of Deep Creek with Elk Creek, located in the ~~NE1/4SE1/4NW1/4~~ NW¼ SW¼ NE¼, Section 14, T39N, R2E, B.M. - per RGH (from map). 11/3/89.

4. Water will be used for the following purposes:

   Amount 40 cfs (cfs or acre-feet per annum) for minimum streamflow purposes from July 1 to Feb. 29 (both dates inclusive)

   Amount 120 cfs (cfs or acre-feet per annum) for minimum streamflow purposes from March 1 to June 30 (both dates inclusive)

   Amount _____ (cfs or acre-feet per annum) for _____ purposes from _____ to _____ (both dates inclusive)

   Amount _____ (cfs or acre-feet per annum) for _____ purposes from _____ to _____ (both dates inclusive)

5. Total quantity to be appropriated is (a) 120 cfs (cubic feet per second) and/or (b) _____ (acre feet per annum)

6. Proposed diverting works:

   a. Description of ditches, flumes, pumps, headgates, etc. None. To protect discharge over Elk Creek Falls from initial location to confluence of Elk Creek with Deep Creek at NW1/4 of SW1/4 of NE1/4, Section 14, T39N, R2E, B.M., Clearwater County.

   b. Height of storage dam _____ feet; active reservoir capacity _____ acre-feet; total reservoir capacity _____ acre-feet; period of year when water will be diverted to storage: _____ to _____ inclusive.

   c. Proposed well diameter is _____ inches; proposed depth of well is _____ feet.

   d. Is ground water with a temperature of greater than 90°F being sought? _____

7. Time required for the completion of the works and application of the water to the proposed beneficial use is 5 years (*minimum 1 year*).

MICROFILMED
JUN 28 1990

8. Description of proposed uses (*if irrigation only, go to item 9*):

a. Hydropower; show total feet of head and proposed capacity in KW. NA

b. Stockwatering; list number and kind of livestock. NA

c. Municipal; show name of municipality. NA

d. Domestic; show number of households. NA

e. Other; describe fully. Scenic and recreational purposes (provide minimum flow over Elk Creek Falls) and to provide a flushing flow for recruitment of spawning gravels and sediment removal.

9. Description of place of use:

a. If water is for irrigation, indicate acreage in each subdivision in the tabulation below.

b. If water is used for other purposes, place a symbol of the use (*example: D for Domestic*) in the corresponding place of use below. See instructions for standard symbols.

TWP	RANGE	SEC.	NE¼				NW¼				SW¼				SE¼				TOTALS
			NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	
39N	2E	11		MSF	MSF		MSF			MSF	MSF	MSF		MSF					
		14			MSF*		MSF			MSF									
			*per RGH (from map). 11/3/89																

Total number of acres to be irrigated _____

10. Describe any other water rights used for the same purposes as described above. None

11. a. Who owns the property at the point of diversion? St. Joe National Forest

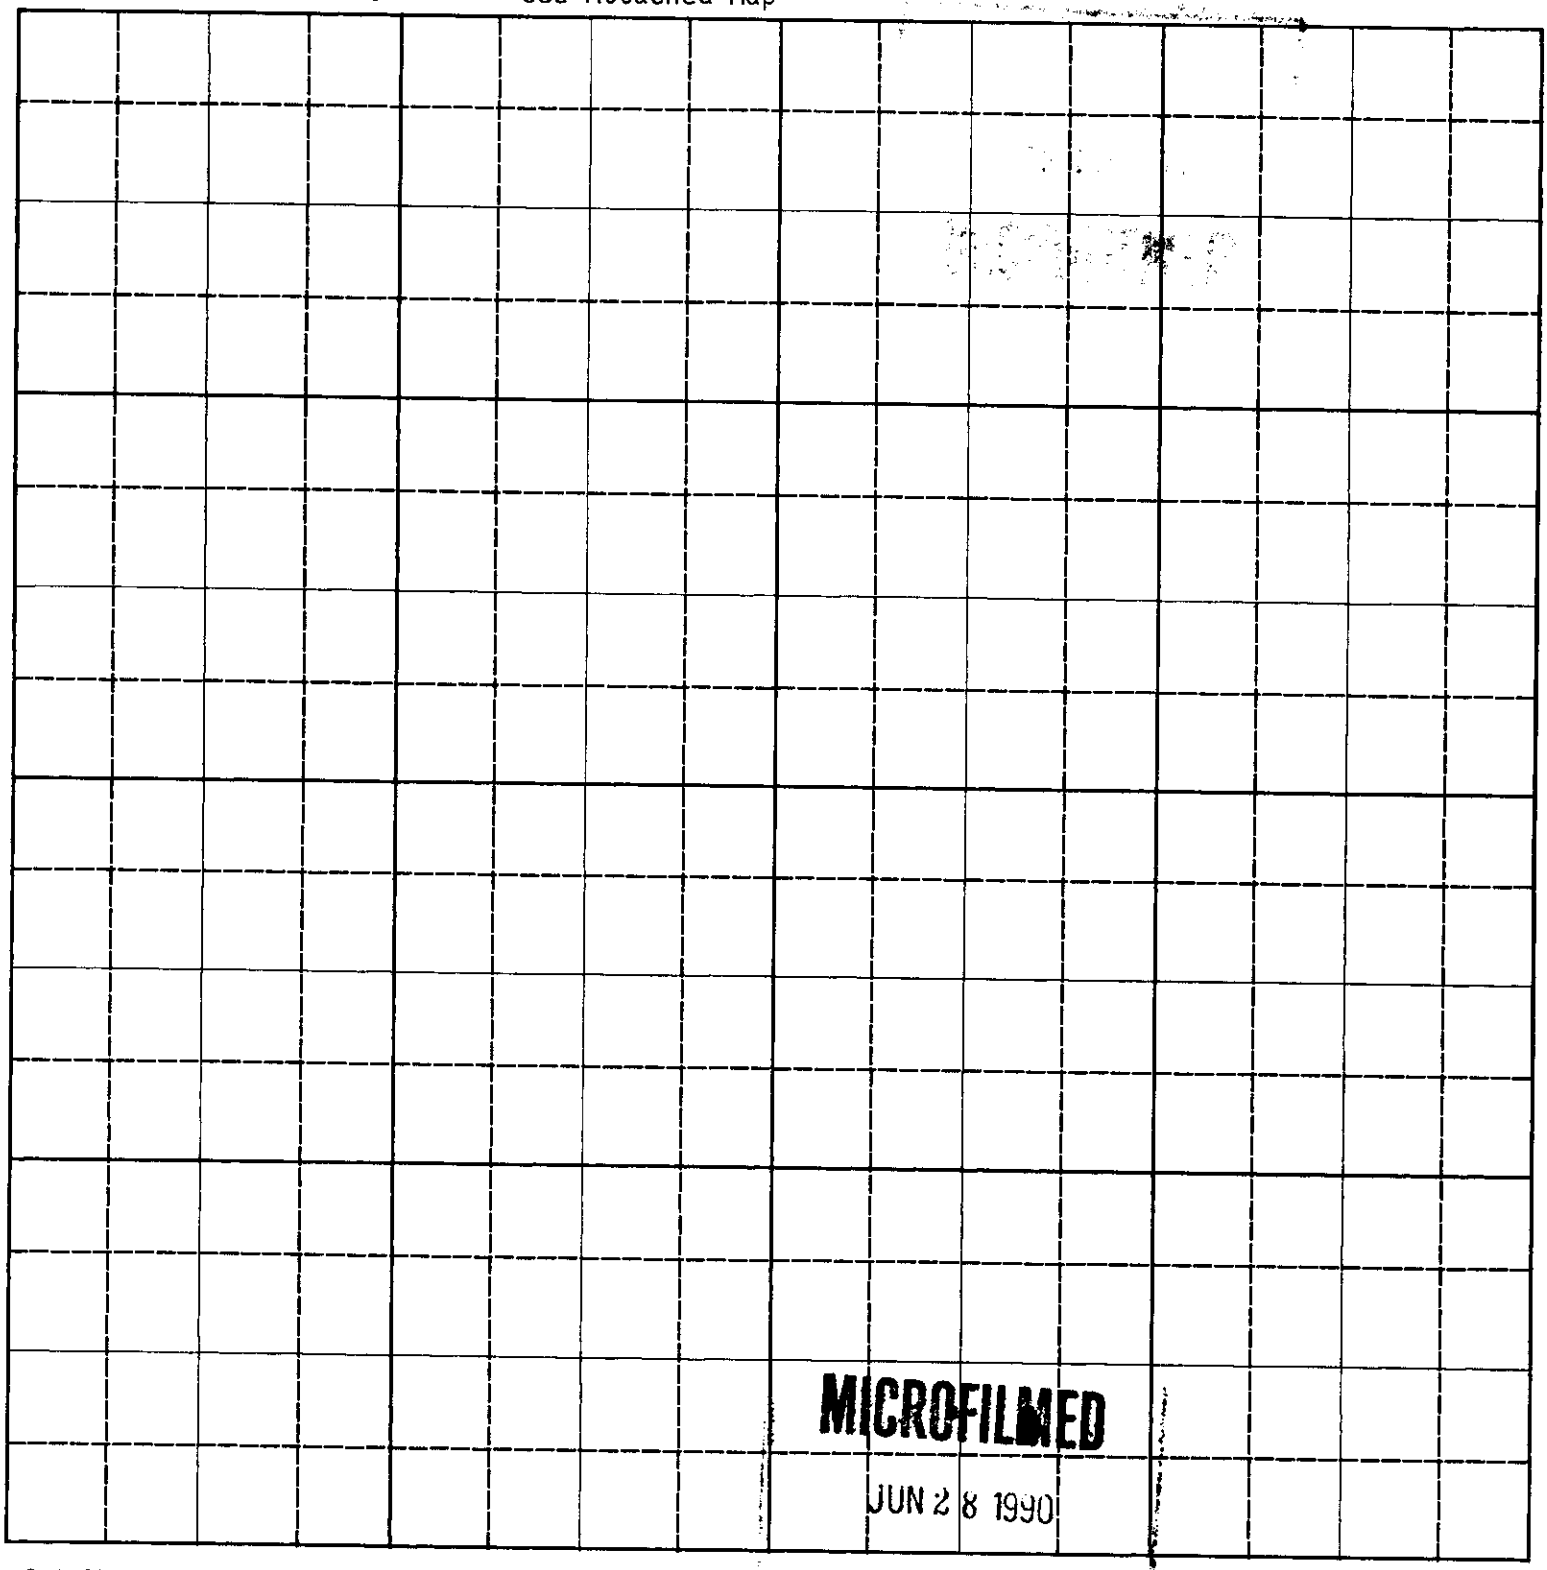

b. Who owns the land to be irrigated or place of use? St. Joe National Forest

c. If the property is owned by a person other than the applicant, describe the arrangement enabling the applicant to make this filing. Idaho Department of Parks and Recreation has requested the Water Resource Board to file for minimum streamflow.

12. Remarks: Minimum streamflow commences at the north section line, Section 11, T39N, R2E, B.M. and terminates at the confluence of Deep Creek with Elk Creek in Section 14, T39N, R2E, B.M.

MICROFILMED

ACTION OF THE DIRECTOR, DEPARTMENT OF WATER RESOURCES

This is to certify that I have examined Application for Permit to appropriate the public waters of the State of Idaho No. 83-7099, and said application is hereby APPROVED.

1. Approval of said application is subject to the following limitations and conditions:

   a. SUBJECT TO ALL PRIOR WATER RIGHTS.

   b. Proof of construction of works and application of water to beneficial use shall be submitted on or before April 1, 19 95.

   c. The rate of diversion, if water is to be used for irrigation under this permit, when combined with all other water rights for the same land shall not exceed 0.02 cubic feet per second for each acre of land.

   d. The water right acquired under this permit if for hydropower purposes shall be junior and subordinate to all rights to the use of water, other than hydropower, within the State of Idaho that are initiated later in time than the priority of this permit and shall not give rise to any right or claim against any future rights to the use of water, other than hydropower, within the State of Idaho initiated later in time than the priority of this permit.

   e. Other: Pursuant to Proposed Memorandum Decision and Order and Order Adopting Proposed Memorandum Decision and Order

Witness my hand this 29TH day of DECEMBER, 1989.

R. KEITH HIGGINSON
Director

MICROFILMED

Form 202
Supplemental

ATTACHMENT TO APPLICATION FOR PERMIT

TO APPROPRIATE A MINIMUM STREAM FLOW

11. Provide evidence that the appropriation will not interfere with any vested water right, permit, or water right application of earlier date of priority.

This application will be junior to all previously granted rights and will not interfere with them.

12. Provide evidence to show that the appropriation would be in the public interest as opposed to private interest.

Elk Creek Falls is a scenic area of regional importance. Middle Falls component of Elk Creek Falls is the highest waterfall in Northern Idaho. Reach includes 6 additional falls ranging from 15 to 35 feet. The USFS has designated as this area as variety class A (distinctive), level 1 (highest sensitivity) and visual quality objective as retention.

13. Provide evidence or justification that the appropriation is necessary for the purposes shown in Item 4.

The 40 cfs flow from July 1 to February 29 is necessary to protect the scenic and recreational values of the waterfalls. The 120 cfs from March 1 to June 30 is necessary to provide adequate recrutement of spawning gravels and to flush sediment from the stream channel.

14. Provide evidence that the minimum flow or lake level is minimum and not the ideal or most desirable flow or lake level.

40 cfs, the minimum flow from July 1 to Feb. 29 is the bare minimum necessary to maintain the scenic beauty of Elk Creek Falls. The minimum flow of 120 cfs from March 1 to June 30 is necessary to preserve and protect the fisheries habitat of lower Elk Creek.

MICROFILMED

JUN 2 8 1990

15. Provide evidence that the flow or lake level requested is capable of being maintained as evidenced by records of stream flows and water levels.

See attached hydrograph .

16. Describe the location of existing gaging stations that can be used in the administration of this appropriation.

None.

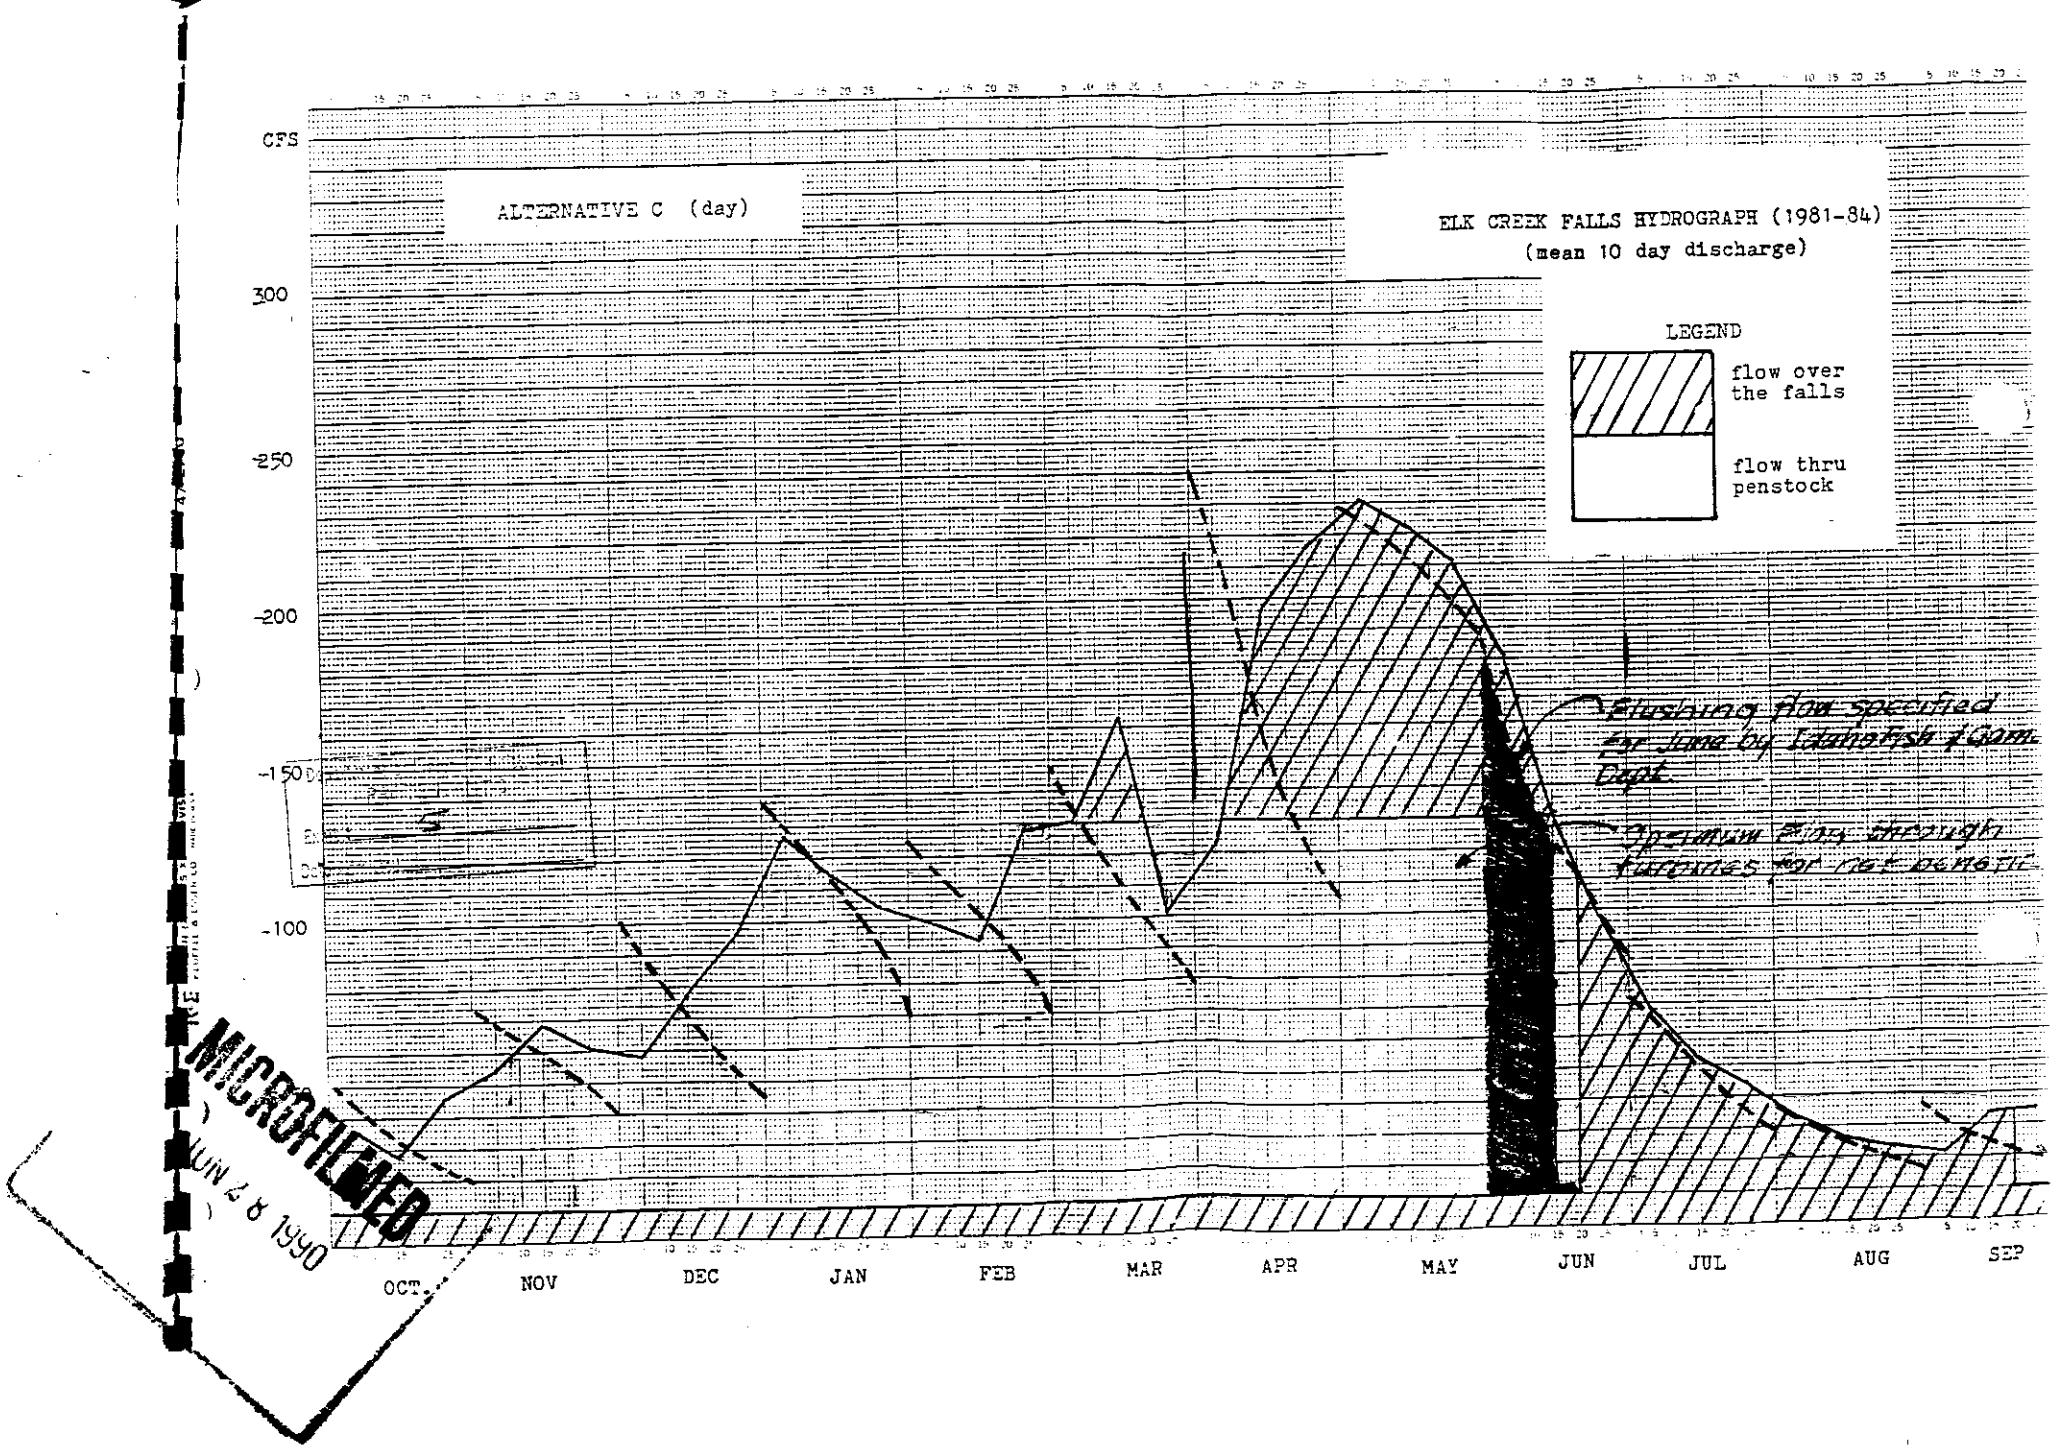

17. Do you intend to install additional gaging stations? Describe the location.

Not unless flow measurement is a condition of approval.

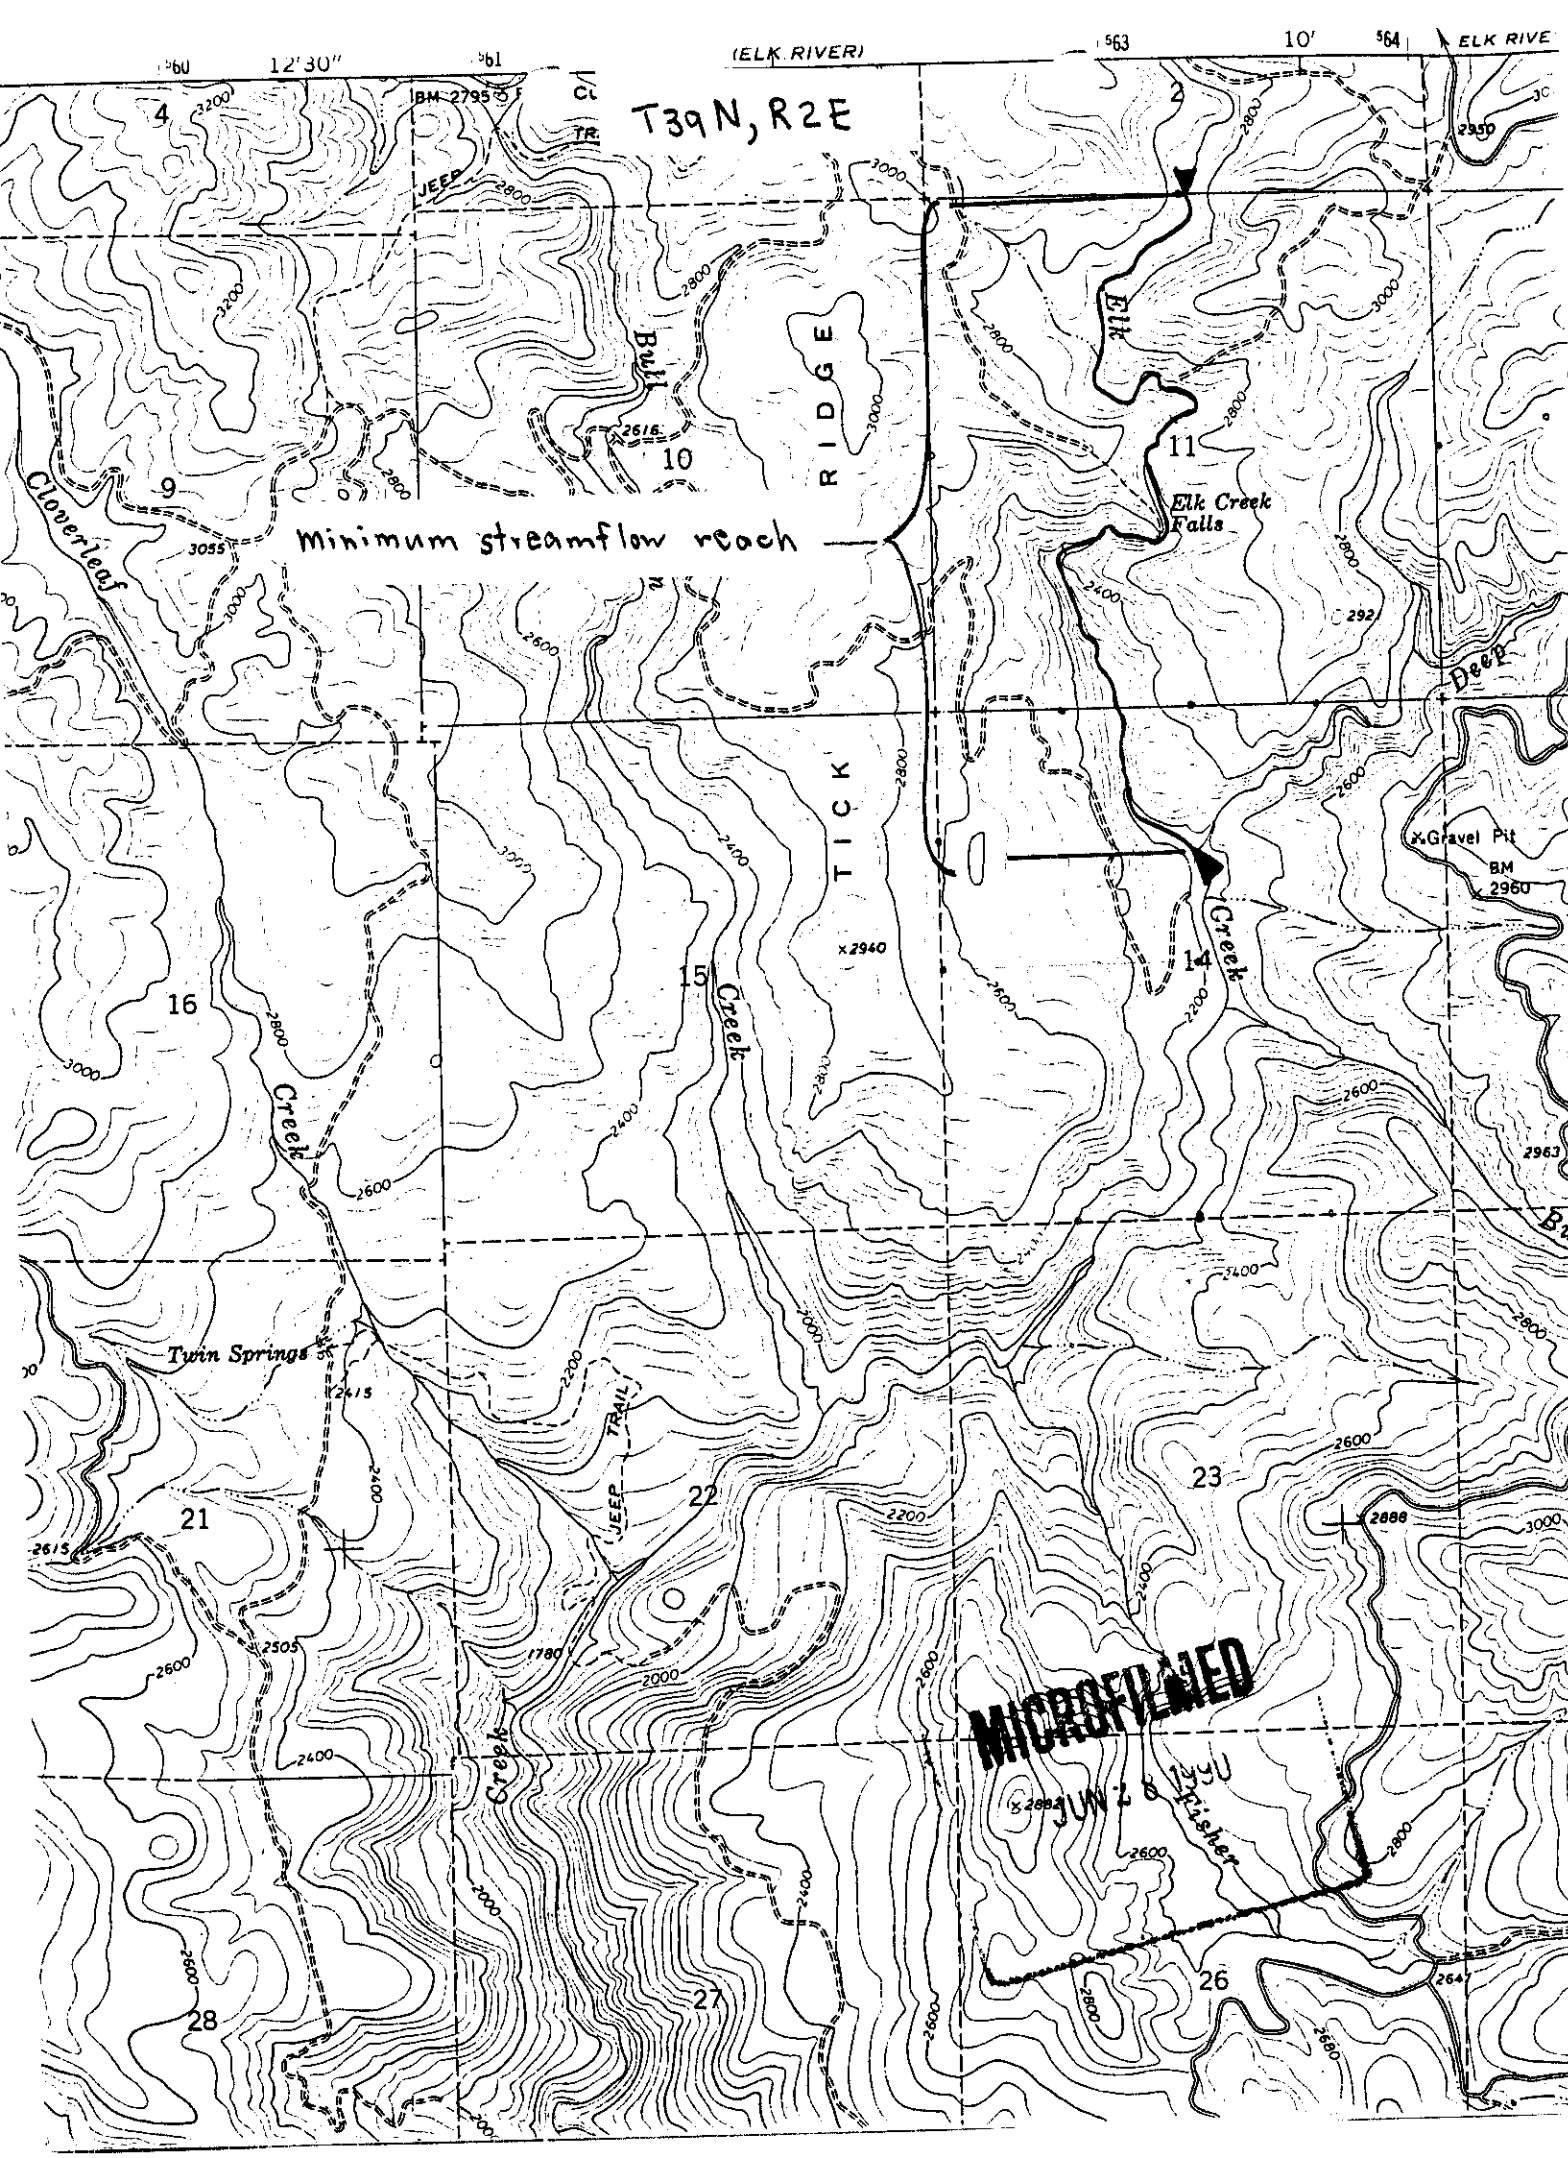

18. List any additional remarks related to this minimum stream flow application.

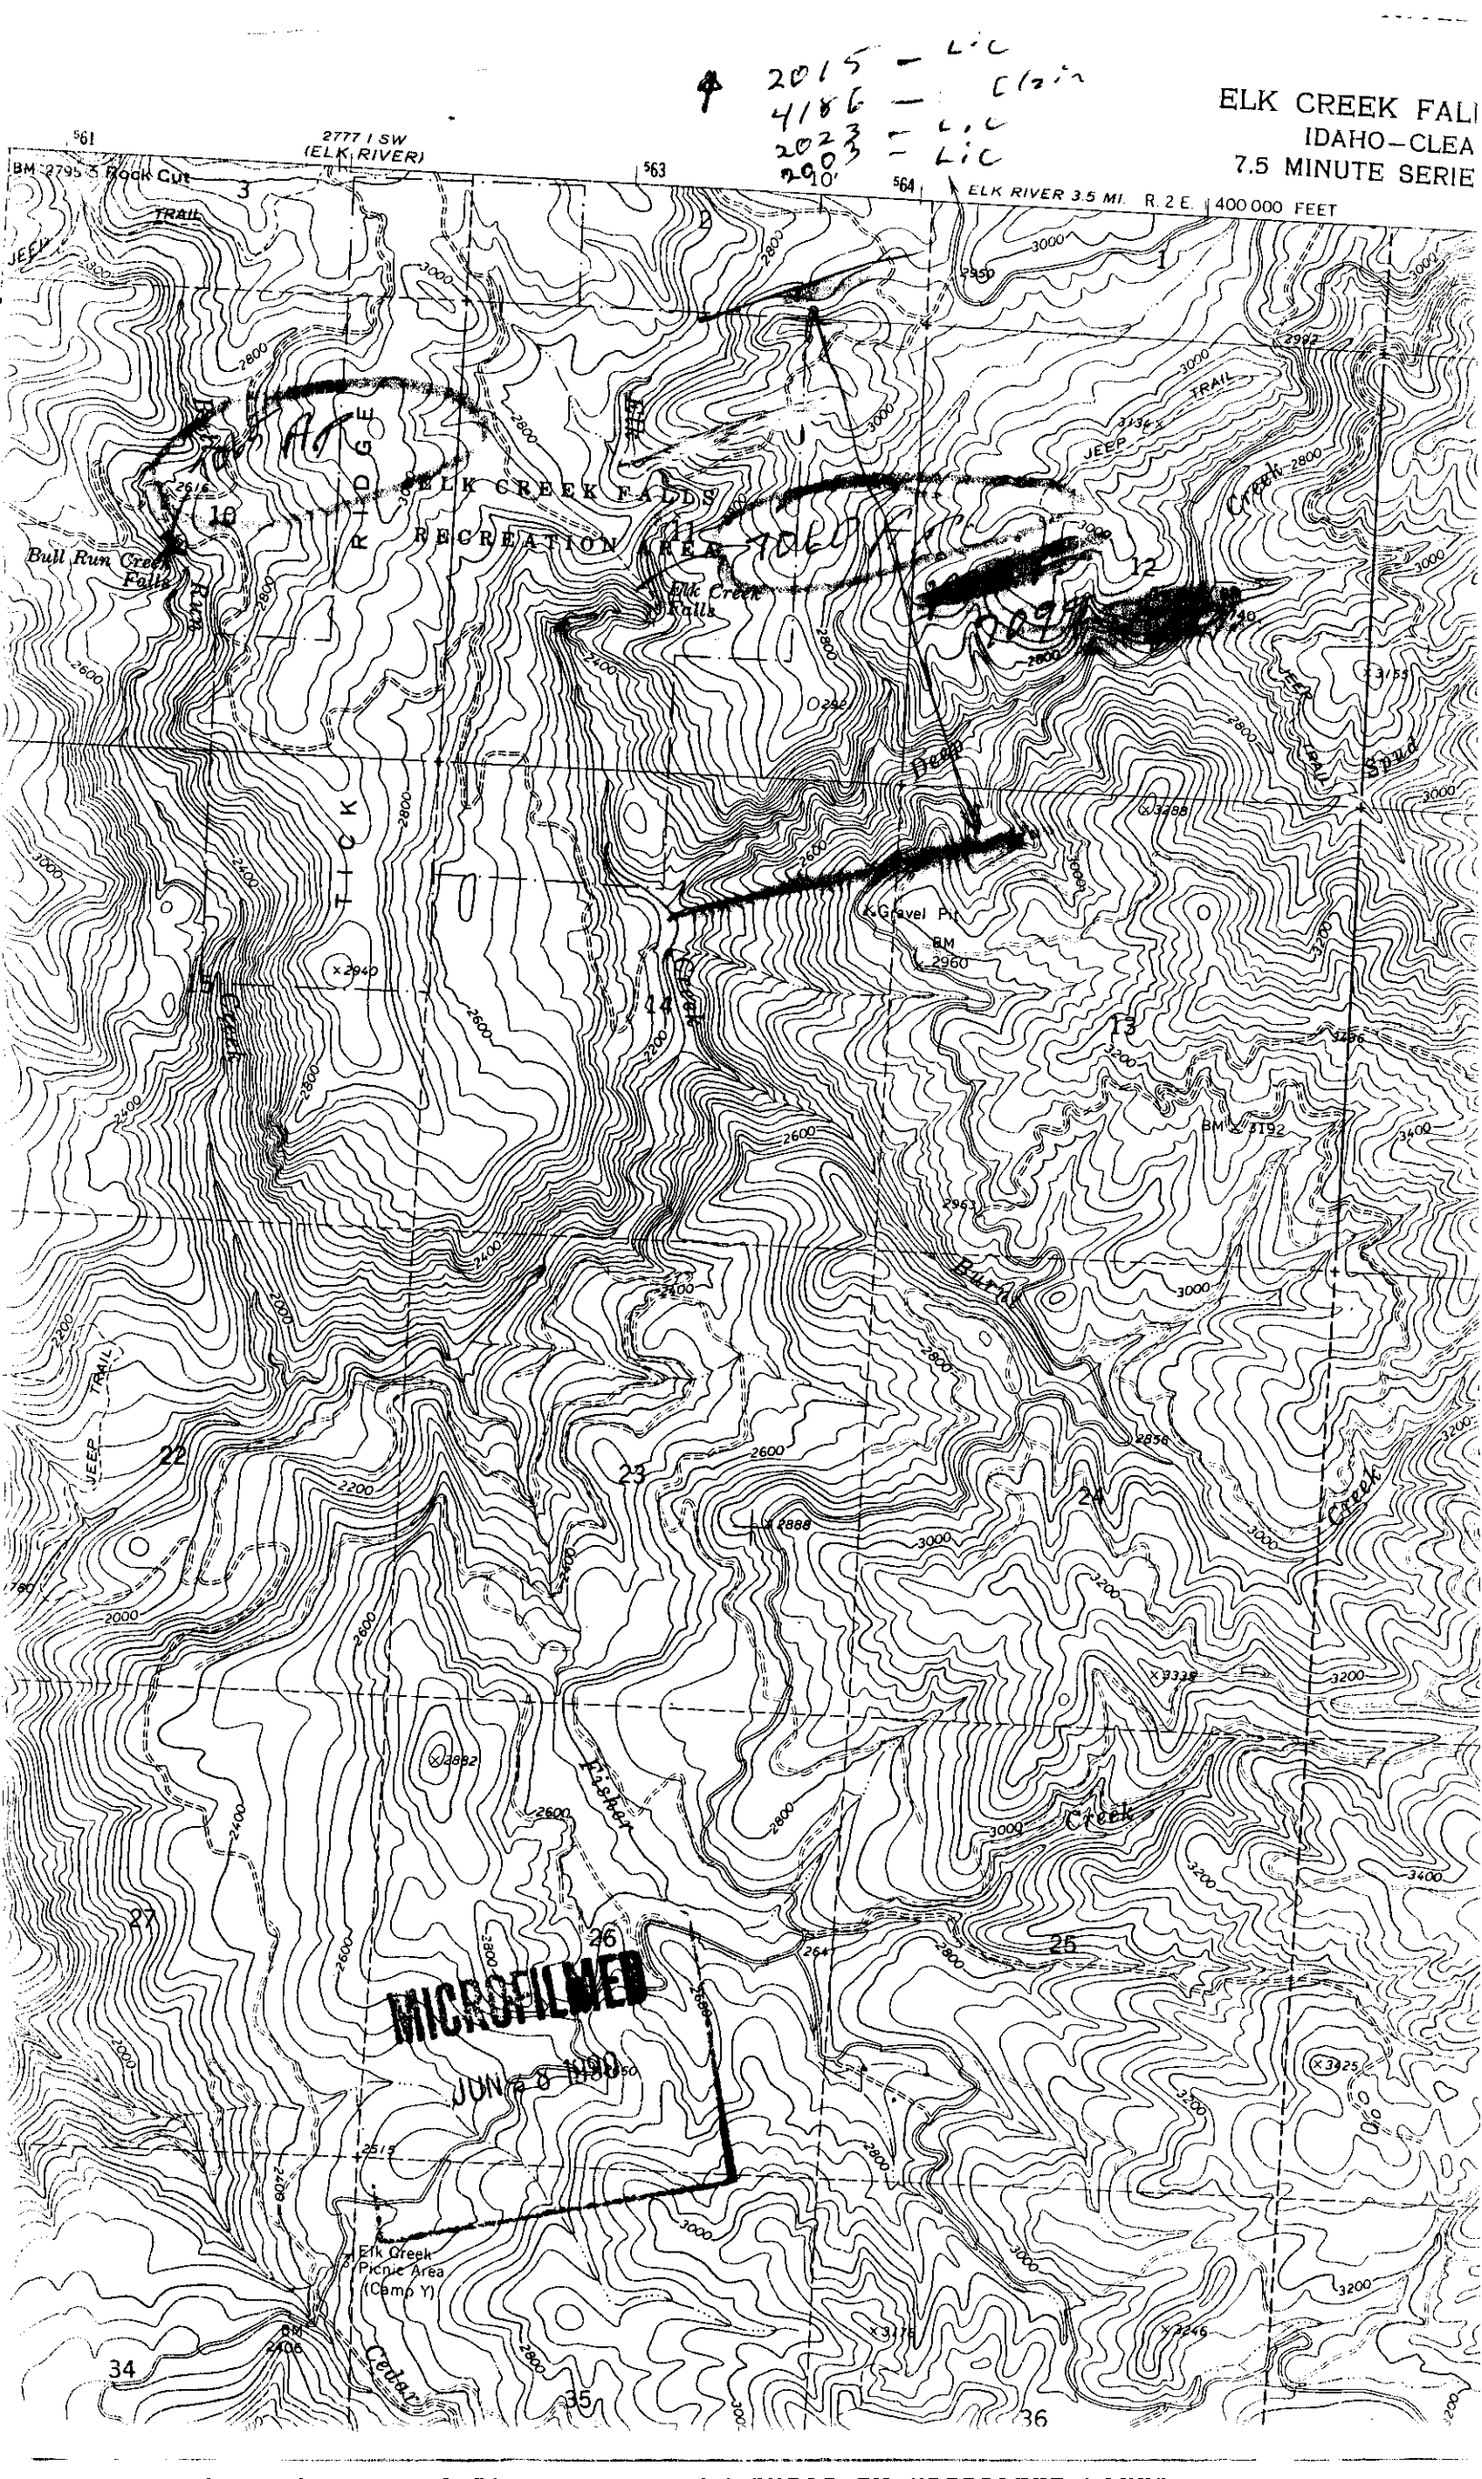

Intense public interest has been displayed in North Idaho over preservation of Elk Creek Falls in its existing natural state.

NOTICE OF CORRECTION

NOTICE IS HEREBY GIVEN THAT THE NOTICE OF HEARING FOR APPLICATION FOR MINIMUM STREAMFLOW FOR APPLICATION FOR PERMIT NO. 83-7099 in the name of Idaho Water Resource Board was advertised incorrectly on September 21 & 28, 1989.

The amount and period of use was incorrectly advertised. It should have been 40.0 CFS from July 1 through February 29, and 120.00 CFS from March 1 through June 30.

Part of the place of use was incorrectly described as the confluence of Elk Creek with Deep Creek, located in the SW¼ NE¼, Section 14, T29N, R2E; whereas, correctly it should be the SW¼ NE¼, Section 14, T39N, R2E.

(For additional information concerning the property location, call the Northern Regional Office at 765-1839.)

NOTICE OF HEARING FOR APPLICATION FOR MINIMUM STREAMFLOW

Notice is hereby given that the Idaho Water Resource Board submitted an application for permit to appropriate water to the Department of Water Resources on February 10, 1989, proposing to appropriate water for a minimum stream flow in Elk Creek, tributary to North Fork of the Clearwater River. The application is further described as follows:

Application No.: 83-7099
Source: Elk Creek
Proposed Priority: February 10, 1989
Amount & Period of Use: 40.0 cfs from July 1, through June 30.
Purpose of Minimum Flow: Scenic and Recreational purposes, fish and wildlife habitat.
Place of Use: That Portion of Elk Creek beginning at a point where Elk Creek crosses the north section line of Section 11, and into the NW1/4NE1/4 of said section, and extending downstream to the confluence of Elk Creek with Deep Creek, located in the SW1/4NE1/4, Section 14, T29N, R2E, B.M., Clearwater County.

The Director of the Department of Water Resources will hold a public hearing regarding the application at Mount Deary Grange, 403 Line Street, Deary Idaho, on Thursday, October 12, 1989. Formal and informal testimony will be taken at 2:00 p.m. Following testimony during the afternoon, the hearing will recess. At 7:00 p.m. the hearing will reconvene, and informal public testimony will be taken. This hearing will be held pursuant to the provisions of Section 42-1503, Idaho Code.

Any party who wishes to formally appear in this proceeding for the purpose of presenting evidence or cross examining witnesses should file a notice of appearance with the Director of the Department of Water Resources, Statehouse Mail, 4055 Government Way, Coeur d'Alene, Idaho 83814, five (5) days prior to the hearing. Other parties will be given an opportunity to informally present their views and comments about filing a protest. Written informal views and comments may also be submitted to the Department of Water Resources prior to the hearing. If issued, [illegible] will be published to all [illegible] parties.

Place of Use:
That portion of Elk Creek beginning at a point where Elk Creek crosses the north section line of Section 11, and into the NW1/4NE1/4 of said section, and extending downstream to the confluence of Elk Creek with Deep Creek, located in the SW1/4NE1/4, Section 14, T39N, R2E, B.M., Clearwater County.

The Director of the Department of Water Resources will hold a public hearing regarding the application at Mount Deary Grange, 403 Line Street, Deary, Idaho, on Thursday October 12, 1989. Formal and informal testimony will be taken at 2:00 p.m. Following testimony during the afternoon, the hearing will recess. At 7:00 p.m. the hearing will reconvene, and informal public testimony will be taken. This hearing will be held pursuant to the provisions of Section 42-1805, Idaho Code.

Any party who wishes to formally appear in this proceeding for the purpose of presenting evidence or cross examining witnesses should file a notice of appearance with the director of the Department of Water Resources, Statehouse Mail, 4055 Government Way, Coeur d'Alene, Idaho 83814, five (5) days prior to the hearing. Other parties will be given an opportunity to informally present their views and comments without filing a notice of appearance. Written informal views and comments may also be submitted to the Department of Water Resources prior to the hearing.

If issued, this permit will be subject to all prior water rights.

NOTICE OF HEARING FOR APPLICATION FOR MINIMUM STREAMFLOW

Notice is hereby given that the Idaho Water Resource Board submitted an application for permit to appropriate water to the Department of Water Resources on February 10, 1989, proposing to appropriate water for a minimum instream flow in Elk Creek, tributary to North Fork of the Clearwater River. The Application is further described as follows:

Application No.:
83-7099
Source:
Elk Creek
Proposed Priority:
February 10, 1989
Amount and Period of Use:
40.0 cfs from July 1, through February 29.
120.0 cfs from March 1, through June 30.
Purpose of Minimum Flow:
Scenic and recreational purposes, fish and wildlife habitat.
Place of Use:
That portion of Elk Creek beginning at a point where Elk Creek crosses the north section line of Section 11, and into the NW1/4NE1/4 of said section, and extending downstream to the confluence of Elk Creek with Deep Creek, located in the SW1/4NE1/4, Section 14, T39N, R2E, B.M., Clearwater County.

The Director of the Department of Water Resources will hold a public hearing regarding the application at Mount Deary Grange, 403 Line Street, Deary, Idaho, on Thursday October 12, 1989. Formal and informal testimony will be taken at 2:00 p.m. Following testimony during the afternoon, the hearing will recess. At 7:00 p.m., the hearing will reconvene, and informal public testimony will be taken. This hearing will be held pursuant to the provisions of Section 42-1503, Idaho Code.

Any party who wishes to formally appear in this proceeding for the purpose of presenting evidence or cross examining witnesses should file a notice of appearance with the director of the Department of Water Resources, Statehouse Mail, 4055 Government Way, Coeur d'Alene, Idaho 83814, five (5) days prior to the hearing. Other parties will be given an opportunity to informally present their views and comments without filing a notice of appearance. Written informal views and comments may also be submitted to the Department of Water Resources prior to the hearing.

If issued, this permit will be subject to all prior water rights.

NOTICE OF CORRECTION

NOTICE IS HEREBY GIVEN THAT THE NOTICE OF HEARING FOR APPLICATION FOR MINIMUM STREAMFLOW FOR APPLICATION FOR PERMIT NO. 83-7099 in the name of Idaho Water Resource Board was advertised incorrectly on September 21 & 28, 1989.

The amount and period of use was incorrectly advertised. It should have been 40.0 CFS from July 1 through February 29 and 120.00 CFS from March 1 through June 30.

Part of the place of use was incorrectly described as the confluence of Elk Creek with Deep Creek, located in the SW¼ NE¼, Section 14, T29N, R2E; whereas, correctly it should be the SW¼ NE¼, Section 14, T39N, R2E.

(For additional information concerning the property location, call the Northern Regional Office at 765-4639.)

RE: Permit No. 83-07099

Dear Permit Holder:

Enclosed is a copy of the approved request for extension of time submitted in connection with the above referenced permit which extends the time within which to submit proof of beneficial use to **April 1, 2005.** Please note that the department has granted this extension based on **a delay caused by litigation**. It is important that you work diligently toward the completion of the development during the construction period allowed since the department **may not** be able to grant additional extensions in connection with this permit.

Section 42-248, Idaho Code, requires you or the owner of the water rights to maintain current ownership and address records on file with the department. Please contact any office of the department for the proper form to file a change of ownership of a water right and/or a change in the address of the owner.

Please contact me at (208)327-7953, if you have any questions regarding this matter.

Sincerely,

Deborah Drew-Ellis

RE: Application for Permit No. 83-07099, Elk Creek Falls

Dear John:

For the past several years, I have been in contact with Justice Department attorneys for the Forest Service concerning flow data on Elk Creek Falls. The Forest Service has been collecting flow data on the stream reach in question for a number of years and has put together an analysis in support of channel maintenance flows. Unfortunately, because of the adjudication litigation between the federal government and the state of Idaho, this information is not currently available to the state.

Because the litigation has made the needed data unavailable to the state at this time, the Idaho Department of Parks and Recreation requests that an extension of time for submitting proof of beneficial use be sought for permit no. 83-07099. Such an extension would appear to be proper pursuant to section 42-204, Idaho Code.

Thank you for your assistance in this matter.

Sincerely,

Rinda

MAY 1 8 1995

THE STATE OF IDAHO

CENTENNIAL LEGISLATURE — SECOND REGULAR SESSION — 1990

IN THE HOUSE OF REPRESENTATIVES

HOUSE CONCURRENT RESOLUTION NO. 43

BY RESOURCES AND CONSERVATION COMMITTEE

A CONCURRENT RESOLUTION

APPROVING AN APPLICATION TO APPROPRIATE WATER FOR MINIMUM STREAMFLOW.

Be It Resolved by the Legislature of the State of Idaho:

WHEREAS, the Idaho Water Resource Board may apply for a permit to appropriate unappropriated waters of any stream to establish a minimum streamflow; and

WHEREAS, under the provisions of Section 42-1503, Idaho Code, an approved application shall not become finally effective until acted upon by the Legislature, except that if the Legislature fails to act prior to the end of the regular session to which the application was submitted, the application shall be considered approved; and

WHEREAS, the Director of the Department of Water Resources approved Application for Permit No. 83-7099 on December 29, 1989, by adopting a Proposed Memorandum Decision and Order authorizing the appropriation of a minimum streamflow in Elk Creek of 40.0 cfs from July 1 through February 29, and 120.0 cfs from March 1 through June 30. The minimum streamflow begins at a point where Elk Creek crosses the north section line of Section 11, and into the NW1/4NE1/4 of said section, and extends downstream approximately one mile to the confluence of Elk Creek with Deep Creek, located in the SW1/4NE1/4, Section 14, T39N, R2E, B.M., Clearwater County.

NOW, THEREFORE, BE IT RESOLVED by the members of the Second Regular Session of the Centennial Idaho Legislature, the House of Representatives and the Senate concurring therein, that the same is hereby approved subject to the conditions and limitations contained in the Proposed Memorandum Decision and Order, dated December 5, 1989, and adopted by the Director of the Department of Water Resources on December 29, 1989.

NOTICE OF HEARING FOR APPLICATION FOR MINIMUM STREAMFLOW

Notice is hereby given that the Idaho Water Resource Board submitted an application for permit to appropriate water to the Department of Water Resources on February 10, 1989, proposing to appropriate water for a minimum instream flow in Elk Creek, tributary to North Fork of the Clearwater River. The Application is further described as follows:

Application No.:	83-7099
Source:	Elk Creek
Proposed Priority:	February 10, 1989
Amount and Period of Use:	40.0 cfs from July 1, through February 29. 120.0 cfs from March 1, through June 30.
Purpose of Minimum Flow:	Scenic and recreational purposes, fish and wildlife habitat.
Place of Use:	That portion of Elk Creek beginning at a point where Elk Creek crosses the north section line of Section 11, and into the NW1/4NE1/4 of said section, and extending downstream to the confluence of Elk Creek with Deep Creek, located in the SW1/4NE1/4, Section 14, T39N, R2E, B.M., Clearwater County.

The Director of the Department of Water Resources will hold a public hearing regarding the application at Mount Deary Grange, 403 Line Street, Deary, Idaho, on Thursday October 12, 1989. Formal and informal testimony will be taken at 2:00 p.m. Following testimony during the afternoon, the hearing will recess. At 7:00 p.m., the hearing will reconvene, and informal public testimony will be taken. This hearing will be held pursuant to the provisions of Section 42-1503, Idaho Code.

Any party who wishes to formally appear in this proceeding for the purpose of presenting evidence or cross examining witnesses should file a notice of appearance with the director of the Department of Water Resources, Statehouse Mail, 4055 Government Way, Coeur d'Alene, Idaho 83814, five (5) days prior to the hearing. Other parties will be given an opportunity to informally present their views and comments without filing a notice of appearance. Written informal views and comments may also be submitted to the Department of Water Resources prior to the hearing.

ELK CREEK
NOTES FOR DAVE RYDALCH

On February 10, 1989, Gene M. Gray, Chairman of the Idaho Water Resource Board filed an application on behalf of the Idaho Department of Parks and Recreation to appropriate a minimum stream flow on Elk Creek, located in Clearwater, County.

A public information meeting regarding the minimum stream flow was held in Moscow, Idaho on June 21, 1989. The purpose of the meeting was to gather public opinion about the proposed minimum flow.

After the comments were submitted, the Board determined that the minimum stream flow was meritorious and requested that the Department of Water Resources proceed with processing the minimum stream flow application.

The water from Elk Creek ultimately flows into Dworshak Reservoir, in the North Fork Clearwater River drainage. This minimum flow filing will be subject to all prior rights which are either upstream or downstream from the minimum flow reach.

Dear Mr. Higginson,

I regret to write that due to a Joint Finance and Appropriations Committee meeting in Boise, I cannot attend the meeting in Orofino requesting minimum streamflow for Elk Creek.

As per Yvonne Ferrell's suggestion, I am submitting this letter of support and requesting that it be incorporated and recorded into the meeting's minutes.

Elk Creek is recognized as a unique and beautiful resource which must be preserved for the children of Idaho. The minimum streamflow request for Elk Creek has the support of many associations. In fact, the United States Forest Service has designated Elk Creek as a Special Recreational Management Area. Supporting minimum streamflow for Elk Creek will be serving the wishes of sports and nature enthusiasts, as well as paralleling the actions of the federal Forest Service.

I urge your support of this valuable and necessary program.

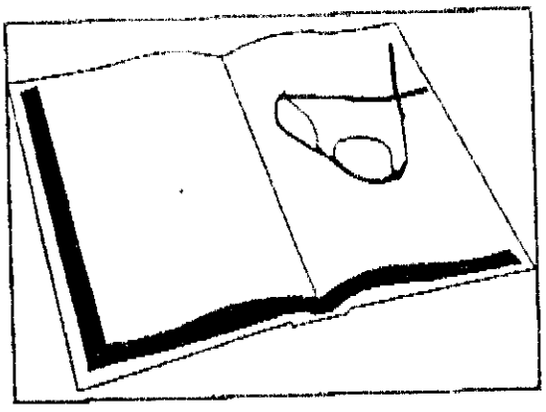

Sincerely,

M. McLaughlin

R. Keith Higginson, Director
Idaho Department of Water Resources
1301 North Orchard Street
Statehouse Mail, Boise, Idaho 83720

Dear Sir:

I would urge you to adopt proposed minimum instream flows in Elk Creek to prevent degradation of a valuable recreation resource.

Elk Creek Falls has become an important place for people to tour and recreate on a year-round basis. The site is one of the crown jewels of recreation on the Palouse, a place where people can enjoy an accessible natural area. North Idaho has changed dramatically in this decade. A recreation-based economy has grown rapidly, partially replacing losses in jobs and investment that have occurred in the resource-based industries of logging and mining. The community of Elk River with a severely depressed economy has derived some benefit from this change. To degrade Elk Creek Falls by intentionally reducing natural water flow would lower visitations and reverse the trend of slow economic recovery in this town.

Hydro development, no matter how well conceived, degrades a natural site in one way or another. Elk Creek draws many visitors to the falls in the month or so after peak flow. Removal of water would ruin that early to mid-spring experience. To subtract the roar of falling water, the rainbows in the spray, and the glitter of the cascades themselves would destroy a natural wonder.

Besides damaging the economy of Elk River and losing a popular recreation site for the region, removal of water from Elk Creek Falls would threaten a population of rare salamanders that depends on the spray zone for its survival. The United States criticizes tropical third world countries that sytematically destroy biodiversity. Let's not be guilty of the same sin. To repair ecological damage is expensive [illegible] something can be done and impossible where extinctions occu[illegible] natural flow to continue at Elk Creek Falls we can maintain biodiversity in the spray zone at no cost.

MICROFILMED
JUN 28 1990

If power has to be developed on public lands like Elk Creek Falls then the public good should be served. We don't have a national energy emergency, and there would be no overwhelming benefit to the local and regional community from any private hydro development. In the late 1980's private hydro is incompatible with public use on this site. Recreation and tourism have clear priority over hydro at Elk Creek Falls.

At present Federal government agencies quibble over the fate of Elk Creek Falls. The Federal Energy Regulatory Commission may not act in the public good. The State of Idaho should protect those resources that matter to the local citizens of Idaho. I urge your department to approve the proposed minimum instream flow in Elk Creek.

Yours sincerely,

John L. Edson
Exec. Off. Elk Falls Committee
Past Pres. Elk River Chamber of Commerce

Attn: Gary Spackman
Manager
Water Right Permits Section

Dear Mr. Spackman:

I will not be able to attend the hearing in Deary, Idaho on October 12, 1989, to determine whether a minimum instream flow in Elk Creek should be approved. These are my written comments for the record.

As I stated at the informational meeting held earlier this year in Moscow, I strongly support the approval of a minimum instream flow in Elk Creek. The instream flow should be large enough to provide for a high flow of water over the Elk Creek falls year around. The primary value of Elk Creek in this stretch is as a recreational area where the falls are the principal recreational drawing card for the people of Elk River. Minimum flows are also needed to protect riparian aquatic zones and resident fisheries from potential harm that might result if stream flows were diverted for hydroelectric power generation.

Therefore, please approve this minimum flow to the maximal flow possible

Sincerely,

Don L Crawford

Dear Mr. Spackman:

RE: Elk Creek Minimum Stream Flow, No. 83-7099

The hearing on this matter being a working day, I regret that I will be unable to testify on October 12. I do, however, commend the Department for holding the hearing so close to Elk Creek.

I wish, however, on behalf of the Idaho Environmental Council Inc., to offer full support for this instream flow application of the Idaho Dept. of Parks.

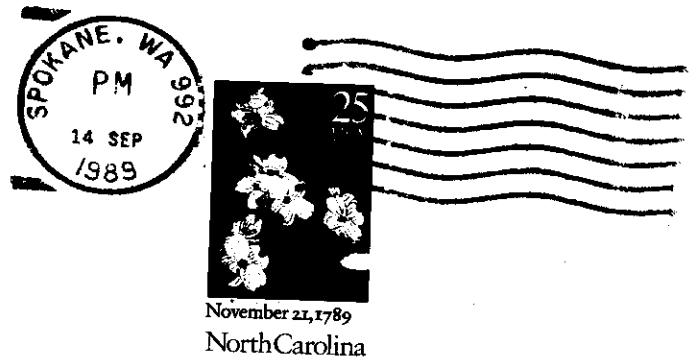

Elk Creek contains a reasonable fishery and has extraordinary scenic values both at, as well as above and below Elk Creek Falls. There is overwhelming public support for maintaining this stream in an umimpaired condition, a status also fully supported by the major land owner in the area, the U.S. Forest Service. Unfortunately, so long as human greed exists, there will always be someone around with a plan to get rich from this stream--almost always at the expense of the public's interest.

This application represents good science, good land use, and good politics. It will help preserve options for future generations and provide pleasure for us in the present. I urge favorable action on this request.

Sincerely,

Dennis Baird
Vice-president
Id. Environmental Council, Inc.

RE: Minimum Instream Flow Application on Elk Creek, No. 83-7099

Dear <sal>:

The Idaho Department of Water Resources will conduct a hearing on Thursday October 12, 1989, to determine whether a minimum instream flow in Elk Creek should be approved. The hearing will commence at Mount Deary Grange, 403 Line Street, Deary, Idaho, beginning at 2:00 p.m. The hearing will recess following formal testimony, but will reconvene beginning at 7:00 p.m. for informal public comment.

Information describing the application and the time and place of the hearing is shown on the enclosed fact sheet. Also, enclosed is a brochure which describes the minimum instream flow procedure.

A notice of appearance must be filed with the Department at least five (5) days prior to the hearing if you want to become full party to the action. A full party may call and cross examine witnesses.

If you do not wish to become a full party, you may also testify informally without filing a notice of appearance. Written comments may also be filed with the Department prior to the hearing.

Sincerely,

Gary Spackman

GARY SPACKMAN, Manager
Water Right Permits Section

'TER-DEPARTMENT MEMO — 1

FROM Phil Rassier

DATE 8-4-89

TO Norm Young

SUBJECT Elk Cr. Falls – HyTech - Proj. 6524

If the Dept. proposes to take further action on the water right pending the appeal of Staff's dismissal of the application for hydropower license to the Commission, the matter needs to be set for Conference / Hearing before the Department.

I am still hopeful the Commission will affirm the dismissal of the application for the FERC license. If dismissal of the FERC license is not affirmed, and the Dept continues to deny the application for water right permit we will be embroiled in a preemption dispute which would be difficult to win under present 9th Cir. law.

Phil

draft 08-04-89

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE

STATE OF IDAHO

IN THE MATTER OF APPLICATION FOR PERMIT NO. 83-7060 IN THE NAME OF HY-TECH COMPANY	SCHEDULING OF STATUS CONFERENCE

This matter having been remanded to the Idaho Department of Water Resources (department) for the purpose of taking additional evidence ~~information~~ in connection with a revised project, the department schedules the following status conference:

IT IS THEREFORE, hereby ORDERED that the matter be set for conference on _____ at _____ _____ to determine the following:

a) Status of the proposed project and administrative proceeding.

b) Schedule development for submission of plans for the revised project.

c) Determination of review procedure for the revised project.

d) Develop a schedule for the hearing on remand.

IT IS FURTHER, hereby ORDERED, that failure of the applicant to appear at the conference is cause for the department to dismiss the application and revised project design with prejudice.

Dated this _____ day of _____, 1989.

Re: Elk Creek Falls Hydropower application

Date: August 3, 1989

Northern Region forwarded the attached information from their files of Hy-Tech's filing on Elk Creek Falls. Knoblock's letter of September 2, 1988, gave the applicant until October 4, 1988, to supply additional design details. Note that the Stipulation for Remand is "to hear additional evidence in connection with this application".

What actions should the Department be taking with respect to this filing?

JUN 2 8 1990

MEMORANDUM

in light of Board's minimum streamflow filing discuss w/ Frank or Wayne

To: Norman C. Young

From: L. Glen Saxton

RE: APPROPRIATE ACTION BY IDWR - ELK CREEK FALLS PROJECT

Date: June 30, 1989

The department has apparently agreed to review revised plans for this project. The plans, however, have not been submitted. For this reason the department has been attempting to get some action going on the matter.

In view of the recent Rock Creek decision in California about three (3) weeks ago, should IDWR be getting out in front of FERC on this matter?

Your comments and direction will be appreciated.

Mr. Frank Sherman / Idaho Water Board
Statehouse
Boise, Idaho 83720
RE: Elk Creek Streamflow Jurisdiction

Dear Mr. Sherman/Idaho Water Board

I would like to express my personal opinion and concerns regarding the instream flow classification for Elk Creek Falls and the proposed hydroelectric project at that site. My hope is that my comments will provoke some careful consideration and planning for the Elk Creek Falls/Elk River area.

As proposed, I **do not** believe the current hydroelectric project is in the best interest of the Elk River and surrounding community, nor do I believe present power demands justify the project. I do believe, on the other hand, that the presently proposed instream flows need further investigation and may be too limiting. For example, our studies (private consulting, 1982 on) suggest a minimum flow of 40 *cfs* will not be reached almost 50 percent of the time, based on a 30 year period of record. I feel it would be unreasonable to protect an instream flow that is not available at the site on a natural basis.

It is my belief that some minimum flow be protected over the Falls, but I am not convinced that a total preclusion of all hydropower or other development is in the best, long-term interest of the area. It would not be inconceivable, for example, for a developer to leave a reasonable amount of flow over the falls, economically produce power, *and* provide access to the area which for the most part is limited to foot traffic (at least it was the last time I was at the site). Further, addition of storage upstream of the Falls, at Elk River or elsewhere, could markedly change both the economics of the site and allow manipulation of flows over the falls. Such manipulation could result in higher flows during high visitation periods and augmentation during low flows. Upstream storage may provide additional recreational benefits to the Elk River area as well.

I am quite familiar with the hydrology of the site and would be willing to review at a cursory level any further studies initiated by your department. Prof. Warnick or myself may also be available to study the flows and/or the site in connection with upstream storage *in greater detail*, but probably not free of charge.

Thank you for considering my comments; I hope they are helpful.

Sincerely,

Jeff R. Filler

LEGAL NOTICE
NOTICE OF PUBLIC MEETING
Notice is hereby given that the IDAHO WATER RESOURCE BOARD has submitted an application for Permit to Appropriate the Waters of Water Resource Region 17 for water for stream flow in Elk Creek to North Fork Clearwater River. The application is further described as follows:
Application No. 43-7099
Source: Elk Creek
Priority: February 10, 1989
Place of Use: That portion of Elk Creek within the north section line of Section 13, and extending from Deep Creek in Section 11 and 14, Township [illegible], Clearwater County.
Amount Applied for:
Period of Use: [illegible] July 1, through February 28.
125 cfs from [illegible] 1 through June 30.
Purpose of Use: Minimum Instream flow, aquatic and recreational purposes. The minimum streamflow will provide flushing flow for recruitment of spawning gravels and sediment removal.
The Idaho Water Resource Board will hold a public meeting on the application [illegible] at 7:00 p.m. in the [illegible] of the University of Idaho Student Union Building (6th and Deakin streets in Moscow, Id.). The purpose of the meeting is to provide more information about the application to the public and to gather information on [illegible] for the application.

NOTICE OF PUBLIC MEETING

Notice is hereby given that the IDAHO WATER RESOURCE BOARD has submitted an Application for Permit to the Department of Water Resources proposing to appropriate water for a minimum instream flow in Elk Creek, a tributary to North Fork Clearwater River. The application is further described as follows:

Application No: 83-7099
Source: Elk Creek
Proposed Priority: February 10, 1989
Place of Use: That portion of Elk Creek commencing with the north section line of Section 11, and extending to its confluence with Deep Creek, within Section 11 and 14, T39N, R2E, B.M., Clearwater County.
Amount and Period of Use: 40 cfs from July 1, through February 29.
120 cfs from March 1 through June 30.
Purpose of Minimum Instream Flow: Scenic and recreational purposes. The minimum streamflow will provide flushing flow for recruitment of spawning gravels and sediment removal.
The Idaho Water Resource Board will hold a public meeting on the application on June 21, 1989, at 7:00 p.m. in the Gold Room of the University of Idaho Student Union Building (6th and Beacon Streets in Moscow, Id.). The purpose of the meeting is to provide more information about the application to the public and to gather information on public support for the application.

RE: Elk Creek Streamflow Jurisdiction

Dear Mr. Sherman/Idaho Water Board

I would like to express my personal opinion and concerns regarding the instream flow classification for Elk Creek Falls and the proposed hydroelectric project at that site. My hope is that my comments will provoke some careful consideration and planning for the Elk Creek Falls/Elk River area.

As proposed, I **do not** believe the current hydroelectric project is in the best interest of the Elk River and surrounding community, nor do I believe present power demands justify the project. I do believe, on the other hand, that the presently proposed instream flows need further investigation and may be too limiting. For example, our studies (private consulting, 1982 on) suggest a minimum flow of 40 *cfs* will not be reached almost 50 percent of the time, based on a 30 year period of record. I feel it would be unreasonable to protect an instream flow that is not available at the site on a natural basis.

It is my belief that some minimum flow be protected over the Falls, but I am not convinced that a total preclusion of all hydropower or other development is in the best, long-term interest of the area. It would not be inconceivable, for example, for a developer to leave a reasonable amount of flow over the falls, economically produce power, *and* provide access to the area which for the most part is limited to foot traffic (at least it was the last time I was at the site). Further, addition of storage upstream of the Falls, at Elk River or elsewhere, could markedly change both the economics of the site and allow manipulation of flows over the falls. Such manipulation could result in higher flows during high visitation periods and augmentation during low flows. Upstream storage may provide additional recreational benefits to the Elk River area as well.

I am quite familiar with the hydrology of the site and would be willing to review at a cursory level any further studies initiated by your department. Prof. Warnick or myself may also be available to study the flows and/or the site in connection with upstream storage *in greater detail*, but probably not free of charge.

Thank you for considering my comments; I hope they are helpful.

Sincerely,

Jeff R. Filler

ELK CREEK FALLS HEARING
Moscow, Idaho
June 21, 1989

Statement by Marguerite McLaughlin, Senator, District 7

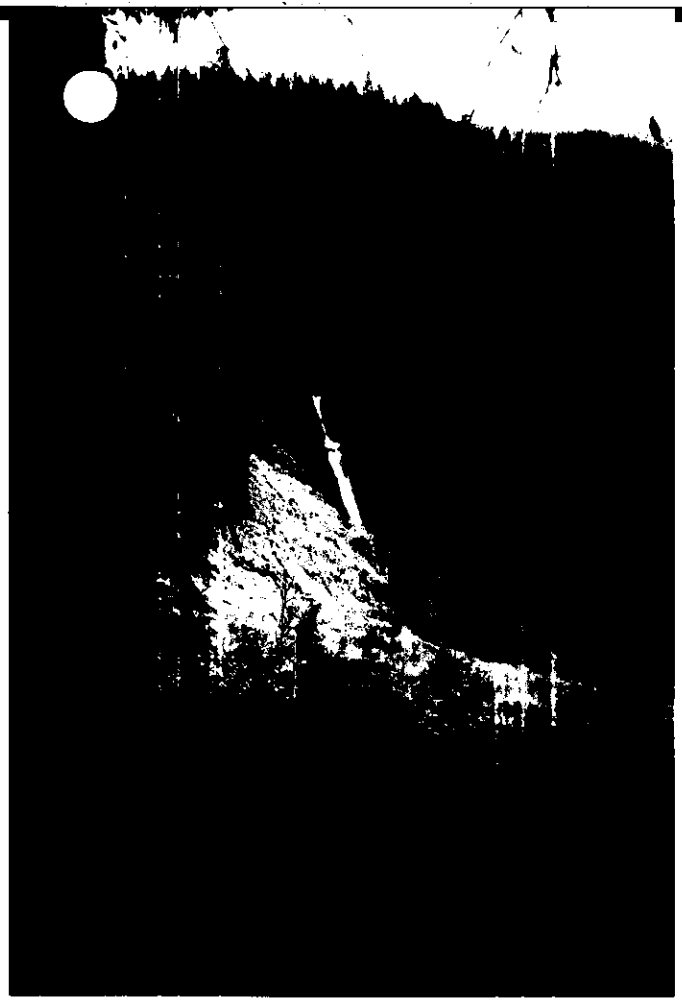

I commend the Parks and Recreation Department for taking the initiative in this matter, and I strongly support their efforts to preserve Elk Creek Falls by enforcing a minimum stream flow.

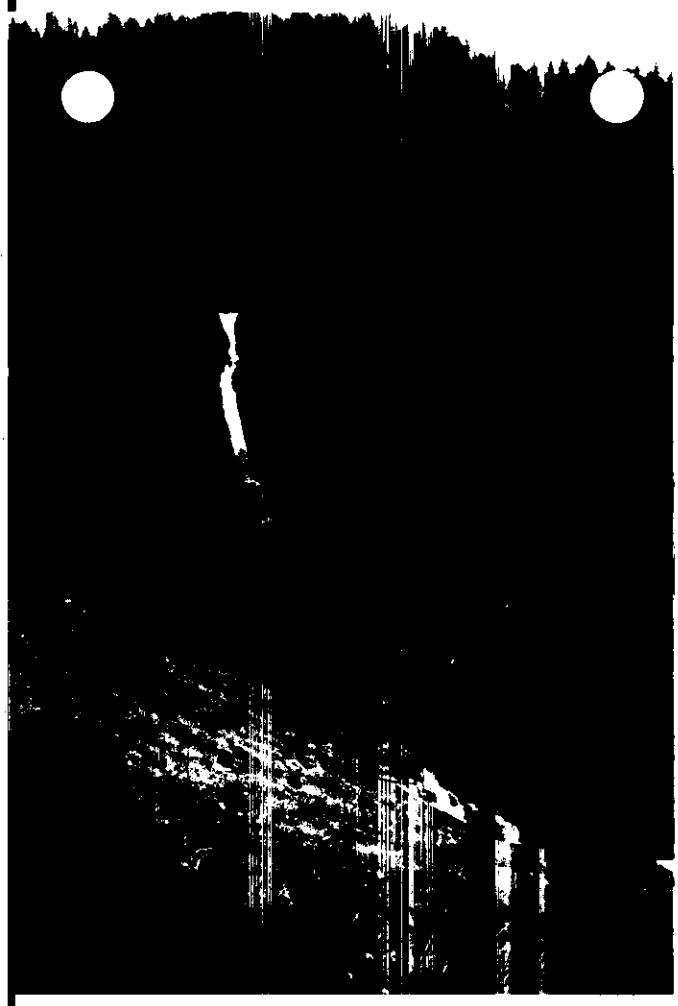

Elk Creek Falls is one of the most beautiful scenic wonders in Idaho and is enjoyed by a great many natives and tourists every year. In our efforts to enhance tourism in Idaho it is imperative that we preserve areas such as Elk Creek Falls in their pristine condition.

TESTIMONY FOR INFORMATION MEETING ON
WATER RIGHT APPLICATION 83-7099
June 21, 1989

INTRODUCTION

I am C.C.Warnick an Emeritus Professor of Civil Engineering. During my career I have taught and conducted research on water resources planning and management. I have been involved in water studies in Idaho for more than 40 years. For at least 10 years I have been involved in studies, in advising, and in hearings related to hydropower development on Elk Creek, the stream under of concern in the application under consideration. I have served as advisor to the community Elk River and have advised three different engineering firms on special aspects of the water and related resources of the Elk Creek Falls power development. I appeared for the town of Elk River in oppositiopn to the water right application of the developer on FERC Project No. 6524. Today I appear as a private citizen and as a representative of Baldwin Hydropwer Corporation, a small hydropower development firm in Idaho.

TESTIMONY

I wish to testify in behalf of the application both postively and negatively, hopefully contructive to your purposes. The testimony is grouped in four concerns as follows:

1. First, I question the wording of your application on the purposes and reason for granting a water right. If it is the Idaho Water Resource Board's desire and intent to represent the "public interest" of the State for a beneficial use it should be so stated. To elaborate on this, I would like to illustrate how "public interest" varies in different situations, by mentioning the way water rights were treated in the water rights hearings on for FERC Project No. 6524 and on the Orofino Falls Power development. In the first case, the reach of the stream involved is on public land and is designated as a recreation area by the U.S Forest Service. Numerous public petitions and expressions have been made of the desire to retain the scenic and recreational values of the reach of the stream involved. The Director of the Idaho Department denied the application on the grounds that the hydropower development was not as important a beneficial use as the public interest in scenic and recreational concerns. On the other hand, at Orofino Falls the land involved and the viewing opportunity for scenic beauty and rereational use is available only on private land. The Director of the Idaho Department of Water Resources in that case ruled in favor of hydropower development, apparently deciding that the public interest had not been demonstrated as being important as a beneficial use. It is important that each site be considered on its own merits and that information be presented to allow the

MICROFILMED
JUN 2 8 1990

decision to be made in a prudent manner. I hope information presented as this meeting will be explicit to define that public interest.

2. If it is the intent of the Idaho Water Resource Board to prevent further action of the developer of FERC Project No. 6524 from perfecting a hydroelectric license on the reach of the river designated in this application, I am in sympathy with the Board. To help achieve this goal, I recommend that the Board file an ammendment to the present Northwest Power Planning Council's "unprotected" from hydropower development clasification on the reach of Elk Creek described in Application No 83-7099 to clasify the reach as "protected". It is my understanding that the Northwest Power Planning Council will consider ammendments in September under newly developed rules for the ammendment process. This may be a quicker action than the appropriation process. Perhaps both actions should go forth, in light of the uncertainty as to how the Federal Eenergy Regulatory Commission might treat such State action. There seems to be a difference of oppinion between the State of Idaho, along with other Western states, and FERC on this issue of state and federal water rights. Please give this attention, if for nothing more than to help define jurisdiction responsibilities.

3. In following out the intent of Chapter 370 of the 1988 Session laws, the Idaho Water Resource Board is required to prepare a comprehensive water plan for the streams of the state. My concern is that studies have not been made in a comprehensive way in this basin in cooperation with all other state agencies concerned. For example, studies should be made to determine the feasibility of putting in upstream storage and enlarging the capacity of Elk Creek Reservoir to prolong the life of the Reservoir and enhance recreational use in the area. Storage water for water budget flows in the Snake and Columbia Rivers for flushing anadromous fish down the rivers is a very real need and additional storage on Elk Creek might provide some of the needed water, but a different schedule of minimum flows would be required. Comprehensive implies that all uses be considered, and that should include possible hydropower development that might be acceptable to the public and preserve the scenic values of Elk Creek Falls. I agree that development under FERC Project No. 6524 is not acceptable. If the Idaho Water Resource Board decides that a water right application with restrictive instream flow for preventing hydropower development is the action that should be taken, I recommend that they specify a limited term for those restrictions so that if comprehensive use studies indicate that a different instream flow restraint would be more prudent a change can be made in the future.

4. The stated wording of the proposed minimum instream flow, "amount of and period of use: 40 CFS from J[illegible] through February 29; 120 CFS from March 1 through June 30", [illegible] Does this mean the streamflows can never be allowed to be less than the

MICROFILMED
JUN 28 1990

amount specified? Historically the flows of the stream in this reach are frequently less than those amounts during these times. On the basis of the fact that the minimum flows are unobtainable it appears to be wise to revise the wording quantifying the instream minimum flow figures.

There is already a reservoir on the stream that has regulated the natural flow. The proposed minimum flows may inhibit the most beneficial use of the reservoir. Has the Idaho Water Resource Board considered the concerns of the Idaho Fish and Game Department, the Recreational District, and the public uses of the waters of the stream? They should consider the existing reservoir use and potential for expansion and what a minimum flow might do to possible water uses for all purposes.

I believe better wording should be developed for expressing the quantification of the minimum instream flows for this reach of Elk Creek. I would be willing to work with the Idaho Water Resource Board and their staff to reach better wording. I have flow estimates in the form of monthly flow duration curves that may not be readily available to the Board that would be helpful in defining the quantification and time periods of restraint.

Ketchum, Id. 83340

Dear Sirs,

I am writing concerning the application of the Hy-Tech Company to put a dam in the Elk Creek Falls area.

As I have stated before and again, I am against a dam in that area.

I don't believe that an area of special scenic beauty, the highest waterfall in northern Idaho, be desecrated by a dam whose main purpose is for monetary profit.

As I'm sure you know, another branch of the government, the U. S. Forest Secvice is apposed to this project.

I am enclosing an article from the Oh Idaho magazine that I hope you'll read. This magazine is promoting the beauty of our state. I think the article would be altered for the worse if in describing the falls a dam was included.

Man does not have the right to continue to alter and abuse bit by bit, the land and air.

Please help preserve another part of Idaho for the future.

Thank you for your consideration.

Yours Truly,
Mark Eisinger

Travel Journal

HUCKLEBERRY HEAVEN

by Bill London

Begin with hundreds of square miles of Idaho forest, all open for hiking and camping. Add a village in the middle of that backcountry, at the end of a state highway–a village barely big enough for a stop sign and certainly much too slow for a stop signal. Drop in an unpretentious family-run resort hotel where the nightlife revolves around the fireplace and the hot tub. Now stir in a handful of unique attractions, like the biggest tree east of the Cascades and the tallest waterfall in Northern Idaho. The resulting prescription is just what any wise physician would order: a naturally-relaxing vacation, a comfortable destination, the town of Elk River, Idaho, population 180.

After the last mill closed down there in 1980, yet another timber town faced what could charitably be called an uncertain future. But mostly due to the enterprising new owners of the town's only hotel, and the mini-infusion of visitor dollars they've created, Elk River's economy continues to exist.

"We've built our business on keeping people comfortable," explained Andre Molsee, one of the new owners of Huckleberry Heaven Lodge, Elk River's finest. "On vacation, when people are roughing it in Idaho, they just won't settle for a buggy old cabin without a good hot shower–and I don't blame them, I won't settle for that either."

So what Huckleberry Heaven offers is warm, family-style accommodations, clean and pleasant, unpretentious and comfortable. In the main lodge, upstairs, the new owners remodeled, adding wood panelling and liberal doses of appropriate Western art on the walls. They created seven bunkhouse rooms with space for up to eight

Illustration: Heidi Pesky

beds in each. Those rooms provide inexpensive yet totally adequate sleeping space. All the rooms have access to a large common living room–with a fireplace, of course, for fall and winter evenings–kitchen, the hot tub, and the bathrooms. For those who prefer privacy, there's the Loft Room, Huckleberry Heaven's premier suite, complete with its own balcony, fireplace and bath. Even the Loft Room is within budget for most vacationers–$39.50 on weekdays, $44.50 on weekends.

Huckleberry Heaven recently expanded, adding the adjacent apartment building to its modest accommodations empire. The apartments have been remodeled into eight condominium-style suites, each with private kitchen and bath, and from one to three bedrooms. The suites are spacious, modern and pleasant; the only evidence of their rustic location is the forested mountains out the window.

Even with all this private kitchen space available, no one really has to spend their vacation cooking. For all their guests, the lodge offers the option of family-style meals served upstairs in the main kitchen/dining area. About three-quarters of their visitors choose to eat those prepared meals, and for good reason–it's unpretentious cooking at its finest, all you can eat, and heavy on the homemade breads and desserts.

But the lodge offers its visitors more than just good food and a clean bed. In the fall they sponsor guided big game hunts and fishing expeditions, and all winter serve as a cross-country ski and snowmobile center. Huckleberry Heaven is open year round, and the new managers are ready to provide whatever their guests need–from customized guided tours to hayrides to catered meals.

However, Huckleberry Heaven is not the only option for dining and accommodations in Elk River. With two other cafe/taverns in town and dozens of campsites and RV hookup spaces in the immediate vicinity, there are choices enough for all but the hardest-core luxury-seekers.

For Elk River visitors the available choices extend far beyond the difficult dilemma of choosing between huckleberry pie and huckleberry donuts for dessert. The town is surrounded by some extraordinary outdoor attractions.

Of all those sites the most awesome is the Big Tree. Only 10 miles north of Elk River, this giant western red cedar–more than 18 feet in diameter, taller than a 15-story building, and at least 3,000 years old–is the largest tree of many species in the forests of the Cascades. Until 1979, the huge

cedar was undiscovered in the vastness of Idaho's backcountry. During that summer nine years ago, a pair of U.S. Forest Service engineers surveying a forest road stumbled onto the tree.

The champion cedar resides in a wide wet valley. An intermittent stream flows under and through its base. A tangle of bracken ferns and alders surround it, keeping the competition about 100 feet away. The grove it grows in is not dense, with trees growing almost trunk-to-trunk—the usual composition of cedar groves—but much more like an open courtyard with a ring of big cedars standing at a respectful distance, in awe of the giant in their midst.

To protect and identify the Big Tree, the U.S. Forest Service has cut a trail to it (a total walking—or skiing—distance from the end of the maintained gravel roadway: an easy half-mile). A minimum of five acres is now being set aside as a Natural Area around the cedar where no cutting will be allowed.

As far from Elk River as the Big Tree, but to the south, is another good reason to visit the area: Elk Creek Falls, the tallest in Northern Idaho. There, Elk Creek has gouged a deep cut in the black basalt bedrock, and in three separate drops cascades a total of 300 feet.

From the parking lot at the end of the well-maintained forest road, easy-hiking trails or prepared cross-country skiing tracks, depending on the season, wind about a mile and a half to the three overlook sites (one above each of the three falls) on the edge of black rock cliffs. For vista dining, those ledges are prime picnicking sites. Above the falls in the warmer months, fly fishers and freshwater waders find plenty of grassy patches and shallow pools.

Swimmers will want to head for Elk River Pond, a delightful mountain lake a quarter mile from town. The Elk River Recreation District has placed three small campgrounds around the lake to encourage visitor use of the area, and offer the camping places for free. But as you might expect at that price, none of those sites provide RV utility hookups. If you are interested in sites with hook-ups, a total of nine such spaces are

MICROFILMED
JUN 28 1990

available within Elk River.

Twenty miles past the pond is a larger mountain lake, Dworshak Reservoir, created by the damming of the North Fork of the Clearwater River. At Dent, where the road from Elk River bridges the lake, the U.S. Army Corps of Engineers built a full-service—including hot showers and utility hookups—50-unit camping area and a boat launch ramp.

But Dworshak is worth visiting for more than the waterskiing opportunities. Its 53-mile length is an open highway into what had previously been some of Idaho's most inaccessible backcountry. Now that the reservoir has provided a water highway, more than 140 "mini-camps" have been built along the shoreline, with access by boat only. Set on isolated coves and pockets, these single-site camping areas offer only a pit toilet, table and grill—and of course, serenity.

If you tire of the water and are ready for a return to the big trees, there are more. Two protected groves of uncut forestland are located north of Elk River, at Morris Creek and at Elk Butte.

The Morris Creek Old Growth Cedar Grove is the only remaining stand of uncut western red cedar in the area. Within the 80-acre preserve it is all cedars, most five to eight feet in diameter, packed tightly together on a gentle, north-facing slope. Foot trails provide the only access into the area, from the gravel road a quarter mile away.

Elk Butte Mountain Hemlock Natural Area is 140 acres of, not too surprisingly, mountain hemlocks, a tree which only rarely grows in pure forest stands. The preserve contains the only grove of big hemlocks in the area. A smaller, high elevation species, these hemlocks are three to four feet in diameter. As a bonus, don't forget to look beyond the trees and the forest to the view from the top. Most of the spine of the Bitterroot Mountain Range, on the Montana border, is visible from the butte.

In addition to all those special and spectacular places, Elk River is the gateway to the miles [illegible] National Forest that surround it. Because there are so many miles of trails and acres of forest with [illegible] few human visitors, camping, fishing, hunting and hiking are allowed virtually everywhere—and game, from deer and elk to hawks and ducks, is not difficult to see. Elk River is remote and undiscovered enough that it is actually rare to meet other people at any of the forest preserves in the area.

For anyone who is interested in a rustic, but comfortable destination, Elk River is a pleasant place to rough it, in style.Ω

To drive to Elk River, first find Moscow, Idaho (it's in the Panhandle, on State Highway 95, midway between Coeur d'Alene and Lewiston. Follow State Highway 8 east and north for 60 miles from Moscow, through Troy, Deary, Bovill, and finally to the dead end in Elk River. Except for that paved highway, all the forest roads in the area are gravel, well-maintained but potentially dusty or muddy, depending on the season.

For more specific information on any of the sites around Elk River, contact the U.S. Forest Service, Palouse Ranger District, 1221 S. Main, Moscow, ID, (208) 882-1152. The best information about Dworshak Reservoir is the Corps of Engineers, Visitors Center, Ahsahka, ID 83520, (208) 476-7631.

IDWR

Mr. Richard A. Sigismonti
Hy-Tech Company
P.O. Box 1305
Lewiston, ID 83501

Dear Mr. Sigismonti:

In our letter of May 3, 1988, pursuant to the Commission's order granting appeal, issued March 3, 1988, 42 FERC ¶ 61, 286, you were granted 6 months to resolve the Forest Service's (FS) objections to the Elk Creek Falls Project, due to its inconsistency with the purposes of the Elk Creek Fall Recreation area, and to amend your license application. You were also advised that any amendment of license would be reviewed for conformity with the provisions of section 4.35 of the regulations, as stated in footnote 21 of the order granting appeal, and that you must comply with prefiling consultation requirements of section 4.38 of the regulations.

Your filing was dated November 23, 1986. Since you refer to a Commission letter dated May 3, 1988, we assume that the date of the letter was a typographical error and should read November 23, 1988. This filing was originally due by November 2, 1988, but you were granted an extension until November 25, 1988, to comply with the requirements of our letter of May 3, 1988. Your letter was filed one week late, on December 2, 1988, and the filing is merely a copy of what was filed with us in October 1987 with a new cover letter. The filing describes proposed modifications to your project as originally filed with the Commission on November 15, 1984. Your filing does not constitute an amendment of your application. It does not include evidence of prefiling consultation with resource agencies as required by section 4.38 of the regulations. Specially, it lacks documentation from the FS that the proposed modifications would make the project consistent with the purposes of the Elk Creek Fall Recreation area. Your application therefore is dismissed under section 4.32 of the Commission's regulations.

This dismissal is issued under authority delegated to the Director and is final unless appealed to the Commission within 30 days from the date of this letter.

Sincerely,

Fred E. Springer

November 25, 1988

Dorothy Byers
911 14th Avenue, Apt. 1
Lewiston, ID 83501

Dear Ms. Byers:

I asked the Department of Water Resources for information concerning the status of the proposed Elk River Falls hydroelectric power project. Enclosed for your information is an analysis of the situation by the Idaho Department of Water Resources.

This project was rejected by both the Federal Energy Regulatory Commission (FERC) and the Idaho Department of Water Resources (IDWR). However, FERC reinstated the license application on a representation by the applicant that the project had been redesigned to avoid impact to the environment. On April 18, 1988, the District Court entered an order remanding the matter to IDWR for the taking of further evidence in connection with the water right application. IDWR has not yet scheduled further hearings on the matter. It has recently granted a motion to intervene filed by the Elk River Recreation District to allow for public interest participation in any future proceeding.

Let me assure you that the application for the hydropower project will be given careful consideration by the IDWR before a decision is made as to whether to change the previous action, which was a rejection in the public interest.

Thank you again for your letter and your "vote of confidence" in my administration.

With best regards,

Sincerely,

Cecil D. Andrus
Governor

CECIL D. ANDRUS
GOVENOR
R. KEITH HIGGINSON
DIRECTOR

November 15, 1988

Honorable Cecil D. Andrus
Governor of Idaho
Statehouse
Boise, ID 83720

Dear Governor:

The letter you recently received from Dorothy L. Byers concerned the proposed Elk River Falls hydroelectric project to be located near Elk River in Clearwater County.

The FERC license for the project and the water right for diversion of the water were both originally rejected due to the impact on the public interest. However, the project sponsors have appealed to the FERC for reconsideration with the apparent representation that they have redesigned the facilities to lessen the impact on the environment. This department's rejection of the water right was appealed to the district court, and we have agreed to have the matter returned to us for reconsideration with the understanding that a new design is now proposed.

We have heard nothing from either the sponsors or FERC and, therefor, are unable to indicate whether there is still any interest on the part of the sponsors or whether the FERC may favorably act on the revised license application. If there is still interest in the project and if the FERC were to issue a license we would proceed to rehear the water right application.

In order for the water right to be approved, the applicant would have to establish the following:

1. The project would not reduce the water supply under existing water rights.

2. The water supply is sufficient for the purpose for which it is sought to be appropriated.

3. The application was made in good faith and not for speculation or delay.

NOV 16 1988

4. The project would be in the local public interest.

If Mrs. Byers would like additional information on this matter I will be happy to supply it to her.

Sincerely,

R. KEITH HIGGINSON
Director

MICROFILMED
JUN 2 8 1990

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE

STATE OF IDAHO

IN THE MATTER OF AMENDED APPLICATION FOR PERMIT 83-7060 IN THE NAME OF HY-TECH COMPANY	ORDER GRANTING PETITION TO INTERVENE

On September 29, 1988, the Elk River Recreation District (district) petitioned the Director of the Idaho Department of Water Resources (IDWR) for Leave to Intervene in the matter of Amended Application for Permit No. 83-7060 filed in the name of Hy-Tech Company (applicant).

The district represents that it exists for the purpose of providing adequate recreational facilities for public use and benefit. The district further represents that Elk Creek and Elk Creek Falls (falls) are major aesthetic and recreational resources within the district and that diversion of water from Elk Creek and the construction of a power generation facility would reduce the flow of water over the falls and would decrease the value of the falls as a public recreational resource.

On October 17, 1988, the applicant filed an Objection to the Petition for Leave to Intervene stating that the district has no direct involvement or control over Elk Creek Falls. The objection further states that the interests of the district are synonymous with the interests of the town of Elk River which is participating in the matter and that there already is an over abundance of parties involved in the matter.

On June 19, 1987, IDWR issued a decision denying the original application for permit on local public interest grounds.

On August 28, 1987, the Federal Energy Regulatory Commission (FERC) denied the application for license for the project on the grounds that the project would interfere with the purposes of the Elk Creek Falls Recreation Area.

On April 18, 1988, the District Court entered an order remanding the matter to IDWR for the taking of additional evidence due to the applicant's assertion that the design of the proposed project had been significantly changed subsequent to IDWR's denial of the application. IDWR has not yet scheduled further hearings on the matter.

IDWR expects the district and the town of Elk River will coordinate their participation as parties to any additional hearing on the matter so as to expedite the proceedings and avoid duplication of argument and evidence. To this end, IDWR will grant the petition to intervene.

ORDER

Based upon the foregoing consideration of the motions filed herein, IT IS HEREBY ORDERED as follows:

1. The Petition filed by Elk River Recreation District for Leave to Intervene in the matter of amended Application for Permit No. 83-7060 is hereby granted.

2. The Objection to the Petition for Leave to Intervene filed by Hy-Tech Company is hereby denied.

DATED this 16TH day of NOVEMBER, 1988.

R. KEITH HIGGINSON
Director

Attorney for Hy-Tech
422 17th Street
Lewiston, Idaho 83501
(208) 746-8162

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER APPLICATION FOR PERMIT NO. 83-7060 TO APPROPRIATE WATER HY-TECH COMPANY, Applicant, G. LESLIE BRITTON, ET AL., Protestants, and THE CITY OF ELK RIVER, Intervenor.	OBJECTION TO PETITION FOR LEAVE TO INTERVENE

TO: DIRECTOR, IDAHO DEPARTMENT OF WATER RESOURCES

COMES NOW HY-TECH COMPANY, the applicant in the above-entitled matter, and objects to the petition filed in said matter by the Elk River Recreation District for leave to intervene in said matter.

MICROFILMED
JUN 28 1990

This objection is made on the grounds that the Elk River Recreation District has not demonstrated, ~~and does not have~~ a direct and substantial interest in the proceedings in the above-entitled matter for the reason that, as set forth in the petition for leave to intervene, the activities of the Elk River Recreation District are to maintain recreation sites at Elk Creek

Reservoir, to operate the city park in Elk River, and to maintain a park and ski area for winter access to the recreation district. The recreation sites at the Elk Creek Reservoir and the city park in Elk River are both upstream from the proposed diversion by petitioner and, therefore, are not affected by the proposed diversion. It is petitioner's understanding that the Elk River Recreation District has neither any direct involvement in, nor any control over, Elk Creek Falls. Elk Creek Falls, in fact, appears to be under the direct control of the United States Forest Service, which agency has already appeared in the water rights proceeding.

Applicant's objection to the petition for leave to intervene is made on the further grounds that, although the petitioner alleges harm to the financial health of the town of Elk River based upon the proposed Elk Creek Falls hydro-electric project, no individual or agency has, to date, been able to produce any statistical evidence of any type showing a negative affect on the financial health of the town of Elk River as a result of the proposed hydro-electric project.

One other point should be made and that is that the town of Elk River has already begun participating in the above-entitled matter and it can be argued that any interests of the town of Elk River would be synonymous with the interests of the Elk River Recreation District.

In summary, applicant, Hy-Tech, objects to the petition for leave to intervene on the basis that any interests set forth in the petition for leave to intervene are already adequately

MICROFILMED
JUN 28 1990

protected and that there is already a plethora and, in fact, an over abundance, of parties to the above-entitled matter.

DATED this 14th day of October, 1988.

Danny J. Radakovich
Attorney for Hy-Tech

STATEMENT OF DIRECT AND SUBSTANTIAL INTEREST

As a recreation district created under Idaho law, the Elk River Recreation District (hereinafter referred to as "the District") exists for the purpose of providing adequate recreational facilities for public use and for the public benefit. IDAHO CODE Section 31-4302. The District maintains developed recreation sites at Elk Creek Reservoir, camping areas, owns and maintains the city park in Elk River, and maintains a Park and Ski area for winter access to the District. Like all recreation districts, it is dependent on a local property tax levy to generate the funds needed for acquiring, constructing and maintaining its facilities and for its annual operating expenses. See IDAHO CODE Section 31-4318. Its financial health is thus directly tied to the health of the Elk River economy as a whole, an economy once based on a vigorous timber industry but now increasingly dependent on tourism.

Elk Creek, and Elk Creek Falls, are major aesthetic and recreational resources within the Elk River Recreation District. The value of Elk Creek Falls stems both from its inherent beauty as a natural waterfall, and from the fact that such falls are a rarity in northern Idaho. Given the uniqueness of Elk Creek Falls, it is perhaps the greatest single recreational asset in the Elk River Recreation District and is one of the major recreational "destinations" for users of the District, particularly recreationists coming from locations outside of Clearwater County. Unlike most other recreation areas in the District, it receives four season use: in spring, summer and [illegible] hikers and

MICROFILMED

fishermen who come to enjoy the numerous benefits of a free-flowing river and waterfall, and in winter by increasing numbers of cross-country skiers who appreciate the contrasting beauty of the frozen falls and river.

Diversion of water from Elk Creek, and construction of a power generation facility as proposed by the applicant, would substantially reduce the flow of water below the diversion point and over the Falls, resulting in a significant decrease in the value of Elk Creek, and the Falls in particular, as a public recreational resource. The direct effect would be a correspondingly significant decrease in use by recreationists of the area surrounding the Falls and the trails which provide access to them. As the Falls are a major attraction and destination point for visitors to the Elk Creek region, we would anticipate a marked reduction in the number of tourists and total recreational "visitor-days" in the area as a whole. This decline in tourism would represent another, substantial detriment to the already hard-hit economy of Elk River. Property values would decline further and there would be a substantial reduction in the District's ability to raise the funds necessary for its successful operation. Its ability to fulfill its statutory function would be significantly impaired.

Elk River Recreation District would thus suffer significant adverse effects if Amended Application No. 83-7060 is approved by the Department of Water Resources. Elk River Recreation District has a direct and substantial interest in participating as a party in proceedings concerning this applicatio

STATEMENT OF DIRECT AND SUBSTANTIAL INTEREST

As a recreation district created under Idaho law, the Elk River Recreation District (hereinafter referred to as "the District") exists for the purpose of providing adequate recreational facilities for public use and for the public benefit. IDAHO CODE Section 31-4302. The District maintains developed recreation sites at Elk Creek Reservoir, camping areas, owns and maintains the city park in Elk River, and maintains a Park and Ski area for winter access to the District. Like all recreation districts, it is dependent on a local property tax levy to generate the funds needed for acquiring, constructing and maintaining its facilities and for its annual operating expenses. See IDAHO CODE Section 31-4318. Its financial health is thus directly tied to the health of the Elk River economy as a whole, an economy once based on a vigorous timber industry but now increasingly dependent on tourism.

Elk Creek, and Elk Creek Falls, are major aesthetic and recreational resources within the Elk River Recreation District. The value of Elk Creek Falls stems both from its inherent beauty as a natural waterfall, and from the fact that such falls are a rarity in northern Idaho. Given the uniqueness of Elk Creek Falls, it is perhaps the greatest single recreational asset in the Elk River Recreation District and is one of the major recreational "destinations" for users of the District, particularly recreationists coming from locations outside of Clearwater County. Unlike most other recreation areas in the District, it receives four season use: in spring, summer [illegible] by hikers and

Re: Elk Creek Falls, Water Right Application 83-7060

Dear Scott:

Thank you for your letter inquiring about the status of the Hy-Tech application for a water right permit on Elk Creek Falls for hydro power purposes. A copy of Ken Dunn's June 19, 1987 decision denying the application for permit on local public interest grounds is enclosed at your request. Hy-Tech appealed Ken's decision to the district court in Nez Perce County (Case No. 63223).

On April 18, 1988, Judge Schilling entered an order remanding the matter to the department for the taking of additional evidence. Remand was ordered pursuant to a stipulation of the parties, because of Hy-Tech's assertion that it has significantly modified the design of its proposed project since entry of Ken's decision. The department has not yet scheduled further hearings.

The FERC Office of Hydropower Licensing issued an order on August 28, 1987 denying the application for license for Elk Creek Project No. 6524. Denial was based on the statement of the Secretary of Agriculture that the project would interfere with the purposes of the Elk Creek Falls Recreation Area. (40 FERC ¶ 62,246).

The Commission granted Hy-Tech's appeal of the denial of the license on March 3, 1988. (42 FERC ¶ 61,286). The order reinstates Hy-Tech's application for license and instructs the Director of the Office of Hydropower Licensing to give Hy-Tech a reasonable amount of time to resolve the Forest Service's objections to the proposed project. A recent news report indicates Hy-Tech has two months to resolve the Forest Service objections. Copies of the two FERC orders are enclosed for your information.

Very truly yours,

R. KEITH HIGGINSON
Director

Firm accuses Forest Service of delaying dam

Associated Press

MOSCOW — The U.S. Forest Service is dragging its feet in reviewing a new plan to construct a dam at Elk Creek Falls near Elk River, developers of the project say.

Leaders of Hy-Tech Inc. of Lewiston maintain no public hearings are needed before construction begins on the redesigned project, which includes tunnelling through one of the basalt cliffs spanning the falls to divert water to a powerhouse near the base of the cascade.

But Clearwater National Forest officials say they are waiting for further information from the Federal Energy Regulatory Commission, which recently reversed its denial of Hy-Tech's license application for the plan to divert water from above the waterfalls for power production.

Palouse District Ranger Richard Hodge says the Forest Service and the public need more facts on the changes from the original project. Responding to public opposition to altering the popular scenic area, the Forest Service had originally recommended the project not be authorized by the federal commission.

"We're still emphasizing the fact that public acceptance is one key factor," Hodge said. "We think they have to have a public hearing because the project has changed considerably and many, I is, a lot of the people who are interested are not aware of it."

But Danny Radakovich, a Lewiston attorney and spokesman for Hy-Tech, said the firm has been frustrated by the inaction shown by the Forest Service.

"It's irritating, because [illegible] the impression they're [illegible]," Radakovich said this week. "Why can't we move [illegible] without another public hearing?" asked Radakovich. "We [illegible] lic hearing [illegible] changes are changes [illegible] the project less and less [illegible] on the environment? [illegible] can't understand why [illegible] hours of operation [illegible] a public hearing."

But Hodge notes that [illegible] the Elk Creek Falls [illegible] clude more than [illegible] operation. Radakovich [illegible] Tech has totally redesigned [illegible] project plans, including [illegible] the penstock in a [illegible] tunnel. The penstock [illegible] diameter pipe that [illegible] from atop the falls [illegible] generator in an [illegible] house.

Elk Creek project resurfaces

Associated Press

MOSCOW — The federal government will reconsider whether to allow a dam on Elk Creek Falls, which is northern Idaho's tallest waterfalls.

The Federal Energy Regulatory Commission determined last week a more thorough review of the project is warranted and granted an appeal of an earlier decision that opponents thought had killed the plan.

FERC has reinstated the license application of Hy-Tech Inc. of Lewiston to construct a hydro-power facility at the scenic falls near Elk River, 50 miles east of Moscow.

The resurrection was not greeted warmly by opponents.

"Just when I thought things were over up there," said Gerry Snyder, president of the Latah County Chapter of the Idaho Conservation League. "It's like taking a dead horse and trying to beat on it until it comes to life. We hope the horse is buried six feet under."

Hy-Tech's application for a license to build the hydroelectric facility was denied by FERC last August, after the federal agency determined the project was not compatible with the Clearwater National Forest's plan to maintain recreation opportunities around the falls.

Hy-Tech President Richard Sigismonti of Lewiston filed an appeal of the decision in September, claiming that FERC's rejection of the project came before he had a chance to submit proposed changes he said would satisfy the Forest Service's objections.

So the agency decided to give the company another chance.

FERC spokeswoman Sharon Hyland said the FERC order issued March 3 states that Hy-Tech "be given a reasonable amount of time" to rework the Elk Creek Falls application to satisfy Forest Service management objectives and resubmit it to the agency.

"We don't know why FERC did this or what grounds they based their decision on," Potlatch District Ranger Richard Hodge said Monday. "We'll have to see what information they got that we didn't."

Sigismonti contends his plan to shut down the facility during summer daylight hours would meet Forest Service requirements and the area would retain its scenic beauty. He also has discussed the possibility of burying portions of the hydro plant underground to improve its appearance.

The Lewiston developer has estimated he's invested $250,000 to $300,000 in the controversial project since initial applications were made in 1982.

Lawmaker pushes for state's rights in Elk Creek case

LEWISTON Tribune

By Marty Trillhaase
of the Tribune

BOISE — A powerful Idaho state senator contends the Federal Energy Regulatory Commission has "thrown down the gauntlet" on state rights by reversing its denial of a license for the proposed Elk Creek Falls hydroelectric project.

And Senate Resources and Environment Committee Chairman Sen. Laird Noh, R-Twin Falls, says the FERC decision demonstrates the need for Congress to protect state water rights.

His argument persuaded the Senate Tuesday to pass, by voice vote, a joint memorial urging Congress to amend the Federal Power Act in order to require FERC to recognize state authority over water.

If that were the law today, the Elk Creek Falls project would be dead. That's because the Idaho Department of Water Resources last summer denied a water right to Hy-Tech Inc., of Lewiston. The company wants to build the $5.5 million project near Elk River.

"It is another escalation of the war," said Noh, who is sponsoring legislation designed to give the state at least a voice in federal hydropower decisions.

"In effect, (FERC) has said the state has no authority to deny the water permit."

Hy-Tech has appealed the state decision, but it appeared the project was virtually dead after then-acting FERC Director Fred Springer of Washington, D.C., denied a license on Aug. 28. Springer cited disputes between Hy-Tech and the U.S. Forest Service, which manages Elk Creek Falls as a recreation area.

FERC reversed that stance Thursday, concluding Springer had failed to justify his decision.

The decision means Hy-Tech Managing Partner Richard Sigismonti of Lewiston must resolve Forest Service objections within "a reasonable amount of time" in order to obtain a license.

"It doesn't state a particular matter of time," said FERC spokeswoman Sharon Hyland. "It just says it will give Hy-Tech a reasonable amount of time. All we know right now is the license application is reinstated and it goes on from here."

Contacted by telephone, Sigismonti expressed confidence that modifications to the project —including plans to shut down operations during summer daylight hours — will satisfy the Forest Service requirements.

"I think it substantiates what we felt all along in our attempt to satisfy the requirements of the environmentalists and the Forest Service," Sigismonti said. "If you can't see it and we don't operate in the season from mid-May through Labor Day in daylight, what's to object to?"

Critics contend the project would threaten fragile soils in the area as well as detract from the water falls flows.

The project calls for a diversion dam to be constructed above the upper falls. A 5,000-foot penstock would divert water to a power generator at Deep Creek.

Hy-Tech estimates the project will generate 16-to 17-million kilowatt hours of electricity each year.

CANT This be stop For Good!?

Feds revive Elk Creek dam

By CHRISTOPHER SMITH
Staff Writer

The federal government has breathed new life into a proposal to build a dam above northern Idaho's tallest waterfall, Elk Creek Falls, near the town of Elk River.

The Federal Energy Regulatory Commission (FERC) determined last week a more thorough review of the project is warranted and granted an appeal of an earlier decision which opponents thought had killed the plan.

FERC has reinstated the license application of Hy-Tech Inc. of Lewiston to construct a hydro-power facility at the scenic falls, 50 miles east of Moscow.

The resurrection was not greeted warmly by opponents.

"Just when I thought things were over up there," groaned Gerry Snyder, president of the Latah County Chapter of the Idaho Conservation League. "It's like taking a dead horse and trying to beat on it until it comes to life. We hope the horse is buried six feet under."

Hy-Tech's application for a license to build the hydroelectric facility was denied by FERC last August, after the federal agency determined the project was not compatible with the Clearwater National Forest's plan to maintain recreation opportunities around the falls.

Hy-Tech President Richard Sigismonti of Lewiston filed an appeal of the decision on September 25 — two days before the 30-day deadline expired. He claimed FERC's rejection of the dam project came before he had a chance to submit proposed changes that would satisfy Forest Service objections.

FERC granted that appeal Thursday and reinstated Hy-Tech's license application. Sharon Hyland, a spokesperson for the agency in Washington D.C., said today the commission's decision to overturn the August order was based on a lack of information explaining the reason for denial.

She said Fred Springer, acting head of the agency's hydropower licensing division, who denied Hy-Tech's application, "didn't discuss the conflicting assertions between the Forest Service and Hy-Tech and he didn't explain the evidence used in making the decision

Please see **DAM** back page

DAM

From Page 1A

to reject the application. All the record of decision indicates is that Hy-Tech has been modifying its application to comply with the Forest Service objections and resolve the differences."

Hyland said the FERC order issued March 3 states that Hy-Tech "be given a reasonable amount of time" to rework the Elk Creek Falls application to satisfy Forest Service management objectives and resubmit it to the agency.

"We don't know why FERC did this or what grounds they based their decision on," Potlatch District Ranger Richard Hodge said today. "We'll have to see what information they got that we didn't."

Sigismonti contends his plan to shut down the facility during summer daylight hours would meet Forest Service requirements and the area would retain its scenic beauty. He also has discussed the possibility of burying portions of the hydro plant underground to improve its appearance.

The Lewiston developer has estimated he's invested $250,000 to $300,000 in the controversial project since initial applications were made in 1982.

Hodge said until he receives the formal notice of FERC's decision, the Forest Service won't take any action. But he anticipated Hy-Tech would be submitting a revised proposal for the project that would require meetings with the Forest Service to determine if any new plan would be acceptable.

"Our position on the original plan has not changed," he added.

Hy-Tech also has filed an appeal of the state's denial of an application for a water right. Former Idaho Department of Water Resources Director Kenneth Dunn — citing overwhelming public opposition — rejected the application for a water rights permit on the project in June last year.

Hy-Tech's appeal of the state decision is pending in Second District Court before Judge Ron Schilling in Lewiston. Phillip Rassier, deputy attorney general for the state agency, said no hearing on the appeal has been scheduled.

Snyder and other opponents of the dam say their work apparently is not done yet.

"I'm sure everyone is just amazed with FERC's decision, especially when the public sentiment clearly dictated leaving the falls alone," said Dennis Baird of Moscow, a member of the Idaho Environmental Council. "It's very unusual for FERC to reverse itself like this."

New design key to Elk Creek project's fate

IdAHO'AN Moscow

By CHRISTOPHER SMITH
Staff Writer

Richard Sigismonti has "totally redesigned" his Elk Creek Falls hydroelectric project to include an underground tunnel, which would channel water to a nearby power generating plant before it falls off a cliff.

Sigismonti, managing general partner of Hy-Tech Inc. of Lewiston, believes the changes could convince the Forest Service and state authorities to rethink their opposition to the project, a spokesman for the developer said.

Hy-Tech has already convinced the Federal Energy Regulatory Commission to reverse its earlier denial of the firm's license application for the plan to divert water from above the scenic falls to generate electricity.

"We're pleased FERC recognizes that we have a project that should have consideration, although we realize there will always be some people who we are never able to satsify," said Dan Radakovich, a Lewiston attorney and spokesman for Hy-Tech.

Critics of the six-year-old plan remain fundamentally opposed to the idea of diverting water from the top of the series of waterfalls, which cascade down a rock cliff approximately 120-feet high.

"Most of the opposition is to damming the falls period, regardless of whether they hide anything," said Jim Schwartz of Elk River, a staunch opponent of the project.

Last week, FERC granted an appeals petition from Sigismonti and reinstated the company's license application. The agency determined its

Please see **PROJECT** back page

MICROFILMED
JUN 28 1990

PROJECT

From Page 1A

August decision to deny the license was reached without sufficient evidence.

Now, with a new design that includes placing a portion of the facility in an underground tunnel, Radakovich said Hy-Tech officials are confident they can convince other regulating agencies the Elk Creek Falls project won't undermine the popular scenic attraction.

"If we can sit down with the Forest Service and get them to approve this new plan, then I think the state water rights board might take another look at it," he said.

The Clearwater National Forest has opposed the plan because the area around the series of waterfalls has been managed for recreation and the agency contends Hy-Tech's plan would detract from that objective.

Meanwhile, the Idaho Department of Water Resources — citing overwhelming public opposition — denied Hy-Tech a state water rights permit last June.

The appeal of that denial is pending in Second District court at Lewiston.

Radakovich said Hy-Tech has made "every effort to accommodate the objections to this project. We have totally redesigned it to take into account the beauty of the falls."

The key change, said Radakovich, is Hy-Tech's plan to put the penstock portion of the project in an underground tunnel. The penstock is a five-foot diameter pipe which would collect water from Elk Creek atop the falls and divert it to a turbine generator located in an adjacent powerhouse.

"At some point we would enter the creek with the penstock underground, rather than damage the basalt face of the cliff where it would be visible," said Radakovich. Opponents feared Hy-Tech's original idea of an unsightly trench and exposed penstock at the top of the cliff.

"Now, we're planning to put the whole thing in a tunnel underground," said Radakovich. Hy-Tech is also investigating a new turbine design, which would be housed inside the penstock and eliminate the need for a powerhouse structure.

The water diverted from Elk Creek to the turbine would be spilled off below the falls or into another creek.

Schwartz doesn't think the new plan is feasible.

"If you go up there and take a look at those rock formations, I don't see how they're going to get the equipment in there to drill this tunnel," he said. "And where will all the debris go?"

Sigismonti — who declined to be interviewed — has said he would not operate the hydro plant during daylight hours from May to October, the heaviest viewing period of the year.

"He's put a tremendous amount of thought and innovative ideas into this project," Radakovich said of Sigismonti. "He's willing to do what's necessary to make it acceptable and we hope we'll get a rational response."

Elk Creek Falls Recreation Area Access

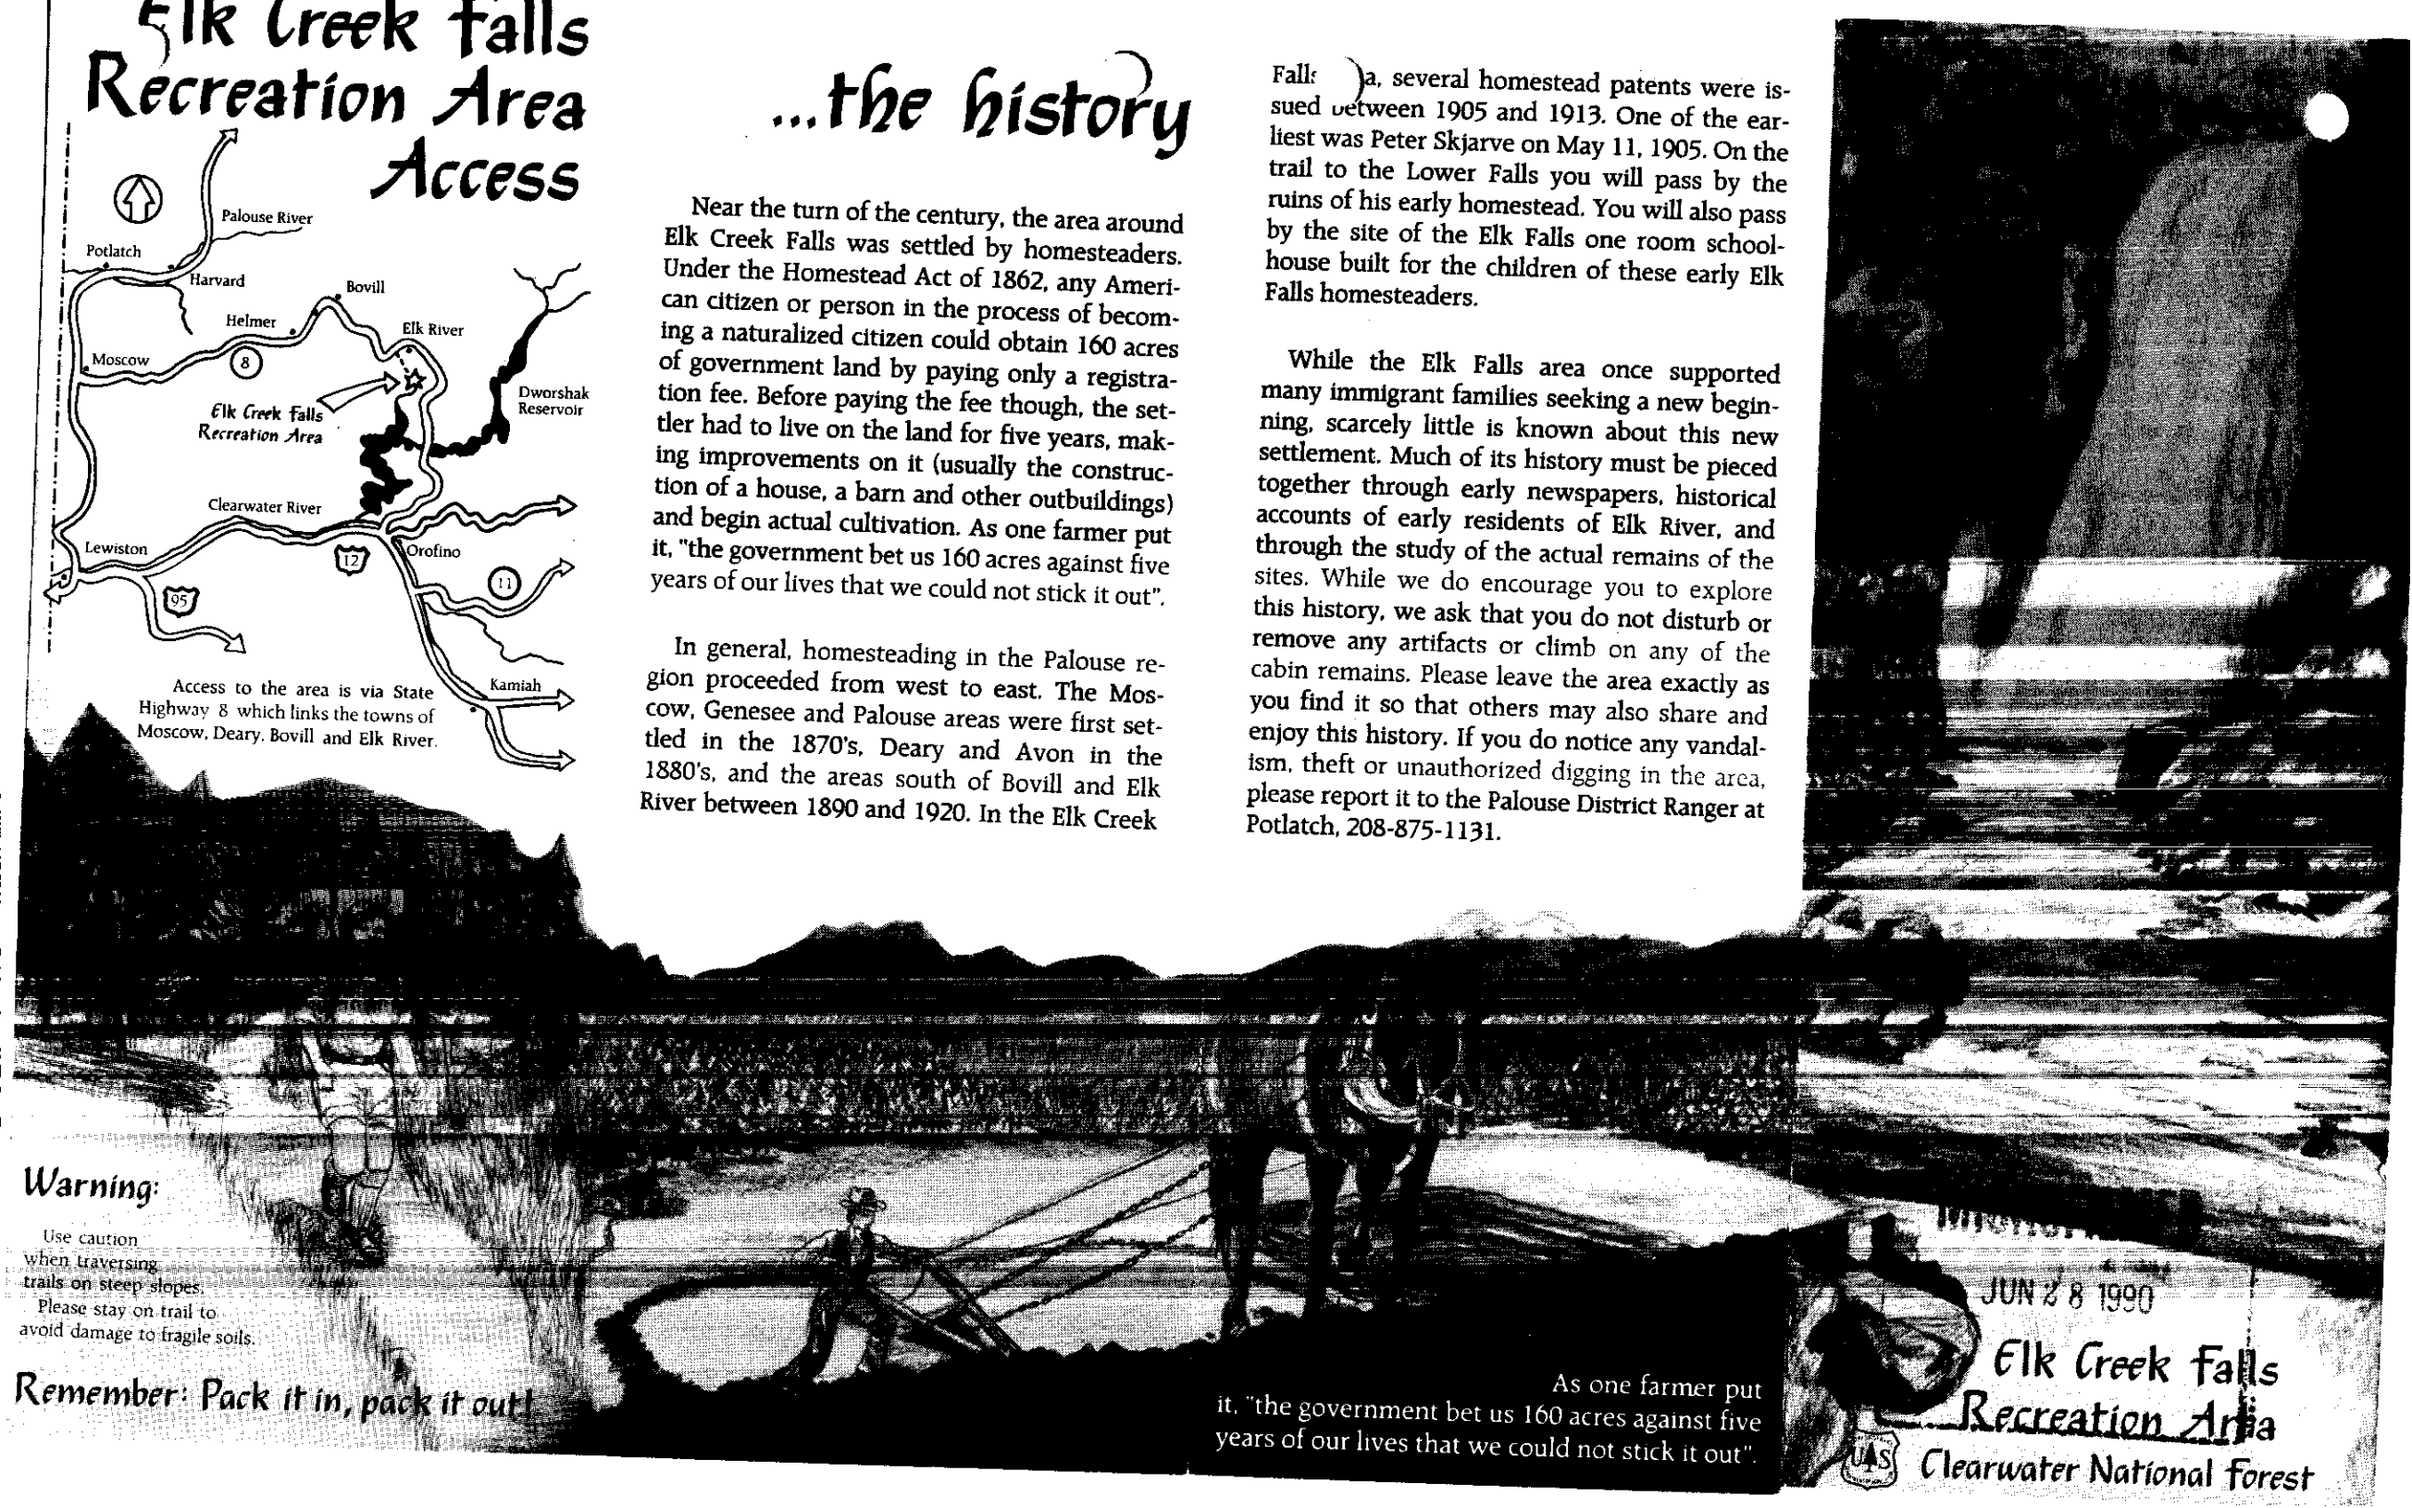

Access to the area is via State Highway 8 which links the towns of Moscow, Deary, Bovill and Elk River.

...the history

Near the turn of the century, the area around Elk Creek Falls was settled by homesteaders. Under the Homestead Act of 1862, any American citizen or person in the process of becoming a naturalized citizen could obtain 160 acres of government land by paying only a registration fee. Before paying the fee though, the settler had to live on the land for five years, making improvements on it (usually the construction of a house, a barn and other outbuildings) and begin actual cultivation. As one farmer put it, "the government bet us 160 acres against five years of our lives that we could not stick it out".

In general, homesteading in the Palouse region proceeded from west to east. The Moscow, Genesee and Palouse areas were first settled in the 1870's, Deary and Avon in the 1880's, and the areas south of Bovill and Elk River between 1890 and 1920. In the Elk Creek Falls area, several homestead patents were issued between 1905 and 1913. One of the earliest was Peter Skjarve on May 11, 1905. On the trail to the Lower Falls you will pass by the ruins of his early homestead. You will also pass by the site of the Elk Falls one room schoolhouse built for the children of these early Elk Falls homesteaders.

While the Elk Falls area once supported many immigrant families seeking a new beginning, scarcely little is known about this new settlement. Much of its history must be pieced together through early newspapers, historical accounts of early residents of Elk River, and through the study of the actual remains of the sites. While we do encourage you to explore this history, we ask that you do not disturb or remove any artifacts or climb on any of the cabin remains. Please leave the area exactly as you find it so that others may also share and enjoy this history. If you do notice any vandalism, theft or unauthorized digging in the area, please report it to the Palouse District Ranger at Potlatch, 208-875-1131.

Warning:

Use caution when traversing trails on steep slopes. Please stay on trail to avoid damage to fragile soils.

Remember: Pack it in, pack it out!

As one farmer put it, "the government bet us 160 acres against five years of our lives that we could not stick it out".

JUN 2 8 1990

Elk Creek Falls Recreation Area

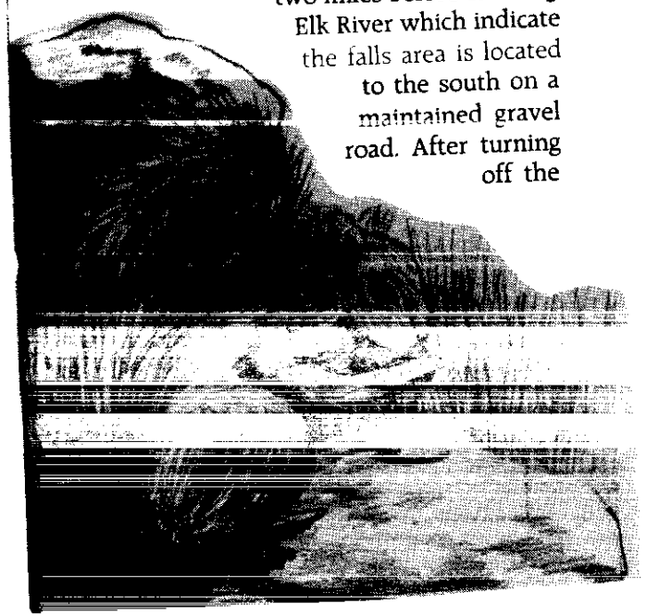

Clearwater National Forest

Welcome

The Elk Creek Falls Recreation Area is one of northern Idaho's unique natural areas. The falls is among the most scenic in the northwest, with a setting which includes a deeply dissected gorge, numerous cascades with natural pools, lush coniferous forests, and impressive vistas.

Located on Elk Creek, approximately 3 miles south of the town of Elk River, the area has been set aside for semi-primitive, non-motorized recreation activities. A recently improved trail system, built with the help of volunteers, includes several overlooks which not only give the viewer a good look at the falls themselves, but of the surrounding landscapes as well.

Access to the area is via State Highway 8 which links the towns of Moscow, Deary, Bovill and Elk River. A traveller heading east on this route would see signs located approximately two miles before entering Elk River which indicate the falls area is located to the south on a maintained gravel road. After turning off the highway, it is approximately 1½ mil[illegible] to a parking area located at the edge of the recreation area.

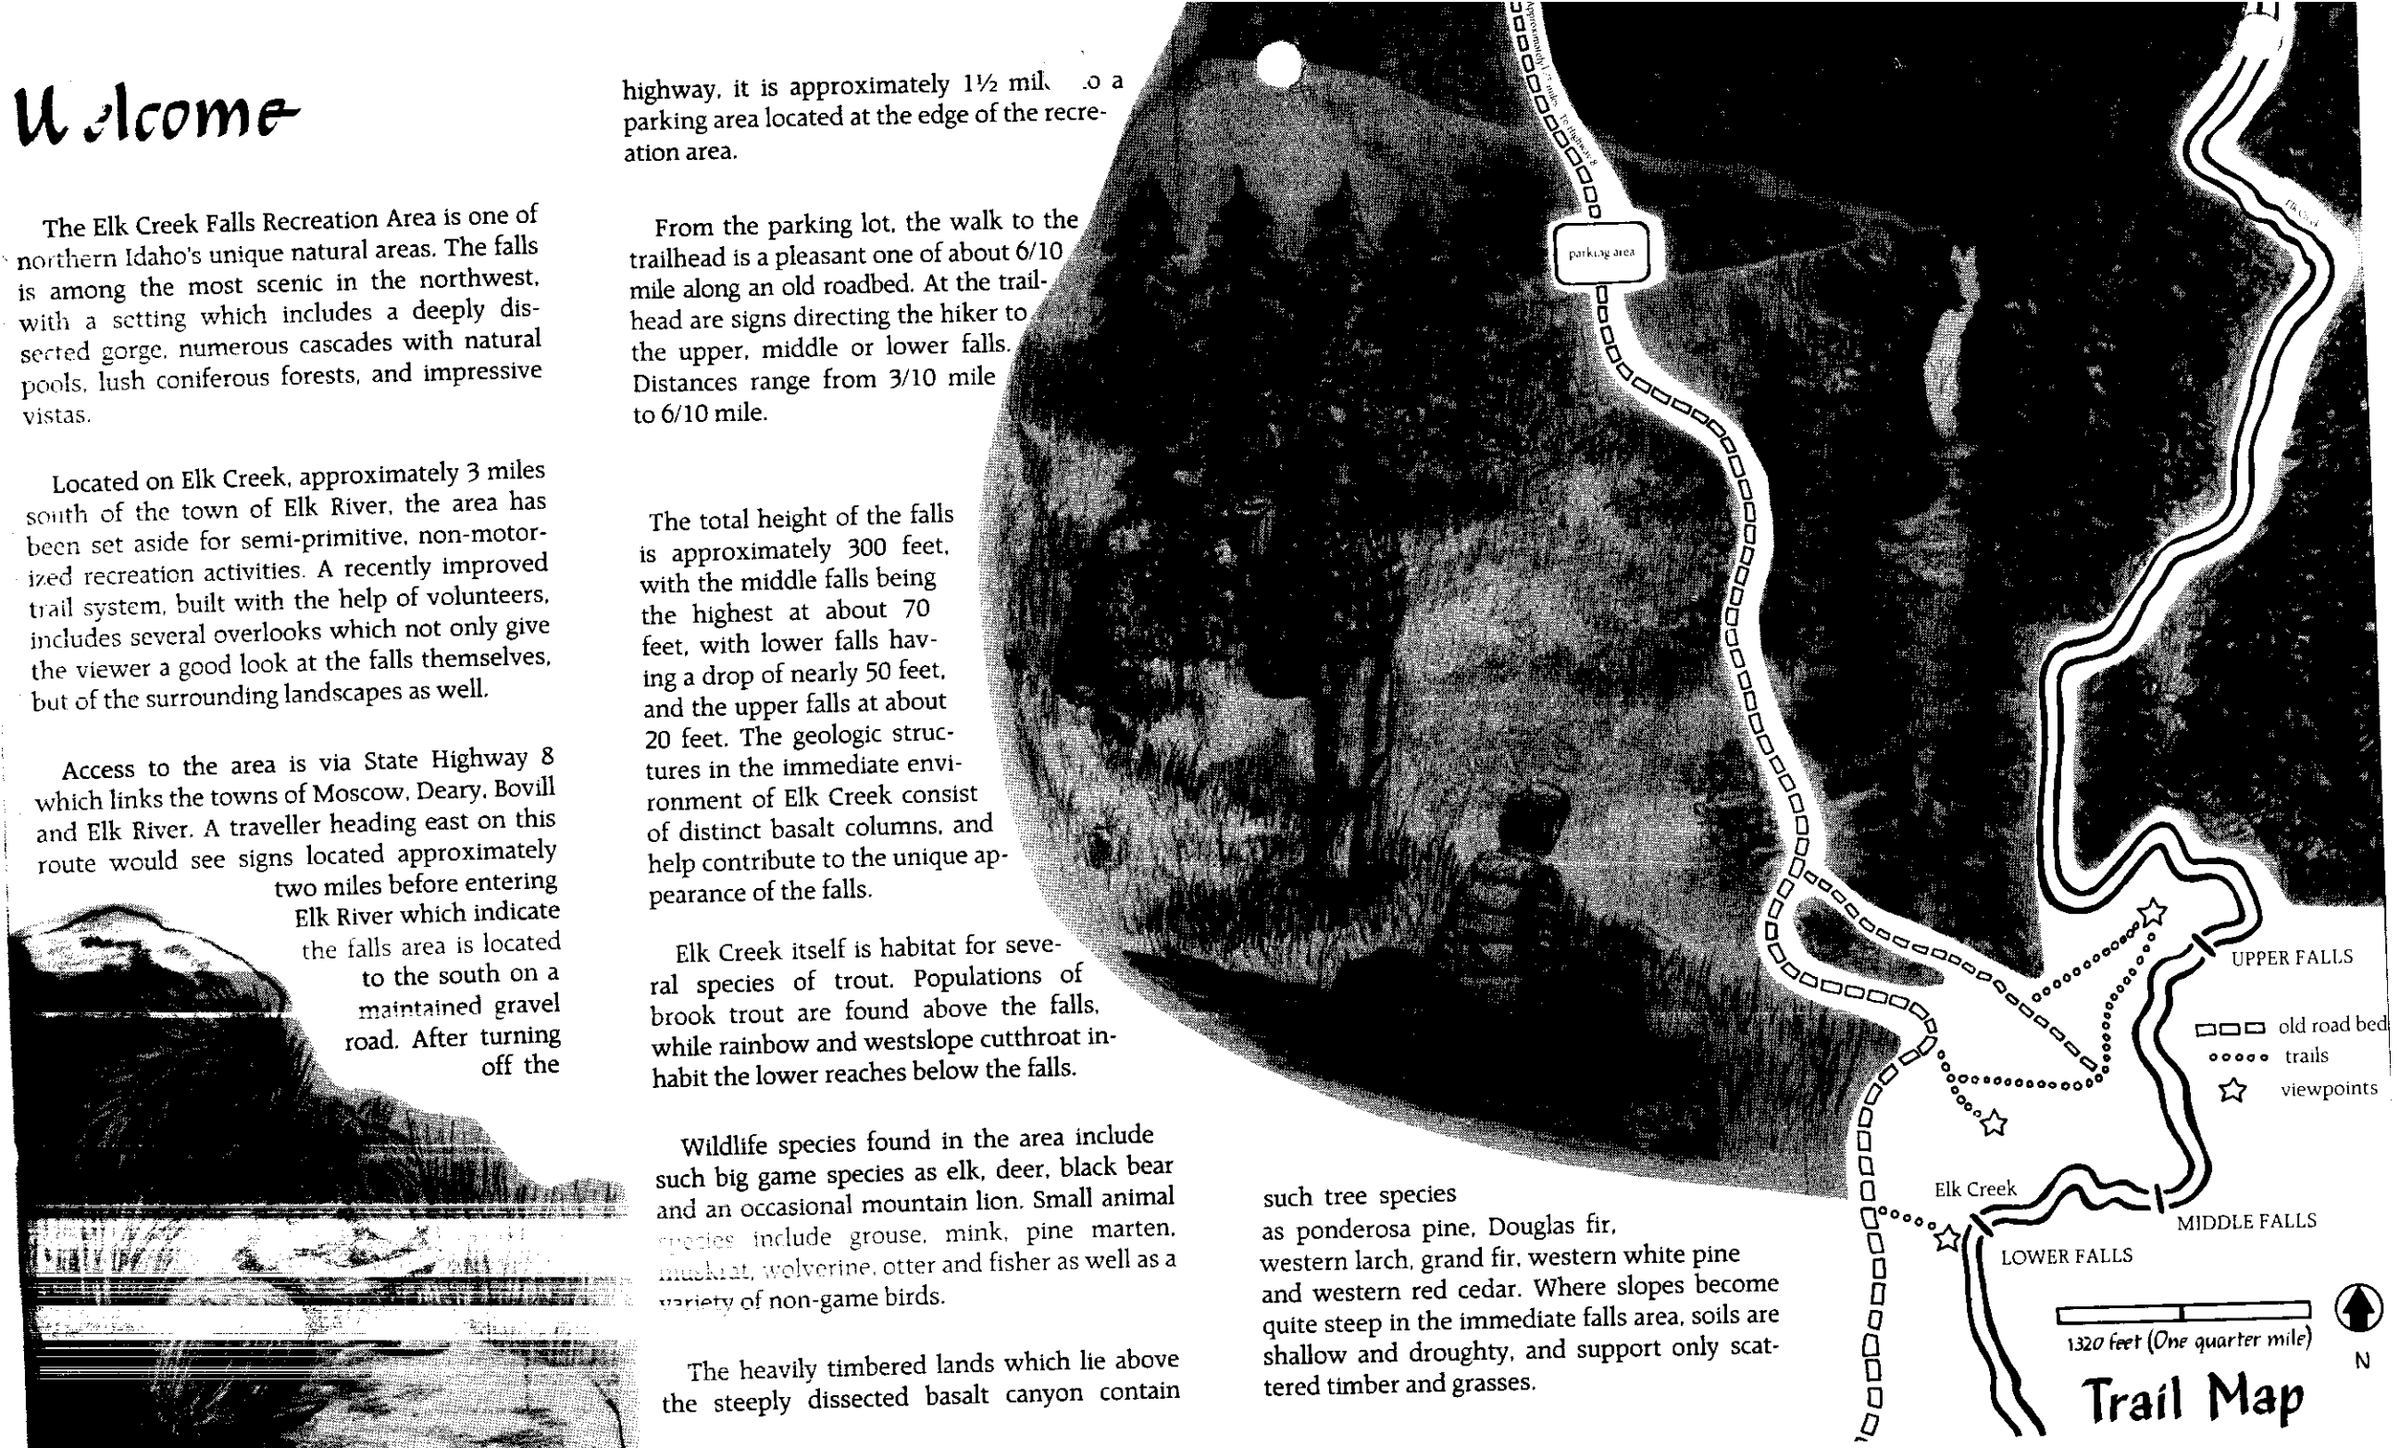

From the parking lot, the walk to the trailhead is a pleasant one of about 6/10 mile along an old roadbed. At the trailhead are signs directing the hiker to the upper, middle or lower falls. Distances range from 3/10 mile to 6/10 mile.

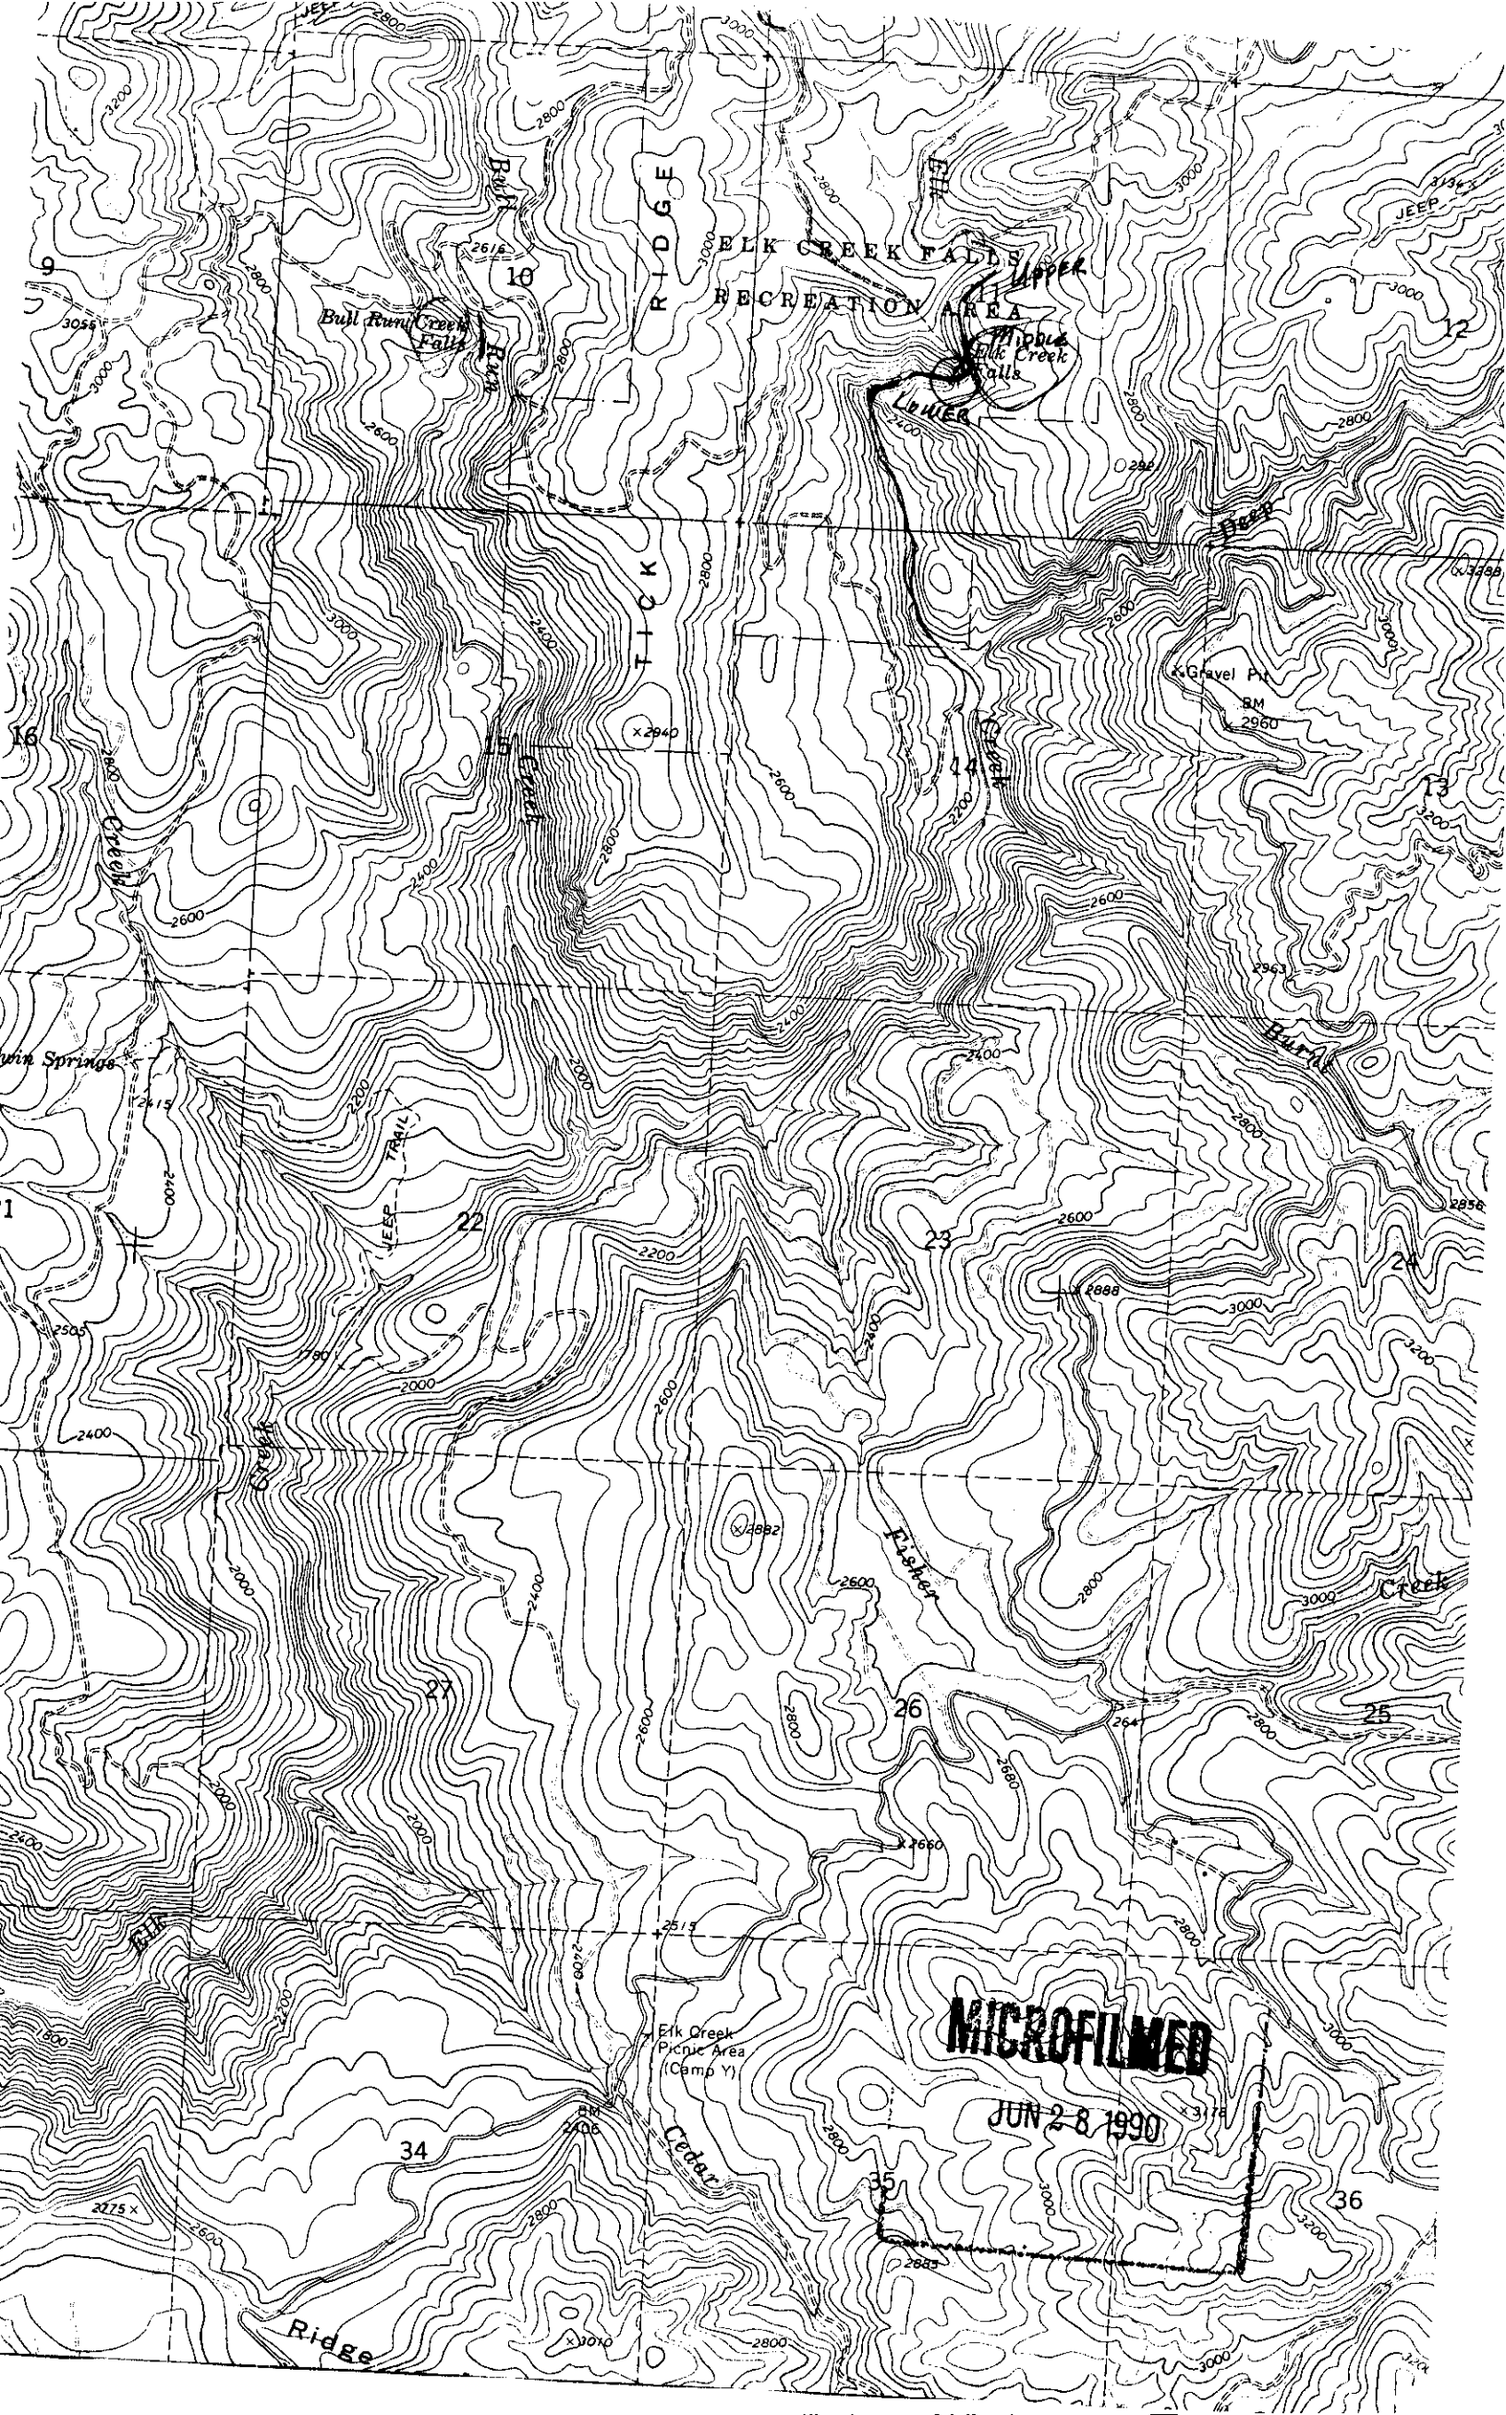

The total height of the falls is approximately 300 feet, with the middle falls being the highest at about 70 feet, with lower falls having a drop of nearly 50 feet, and the upper falls at about 20 feet. The geologic structures in the immediate environment of Elk Creek consist of distinct basalt columns, and help contribute to the unique appearance of the falls.

Elk Creek itself is habitat for several species of trout. Populations of brook trout are found above the falls, while rainbow and westslope cutthroat inhabit the lower reaches below the falls.

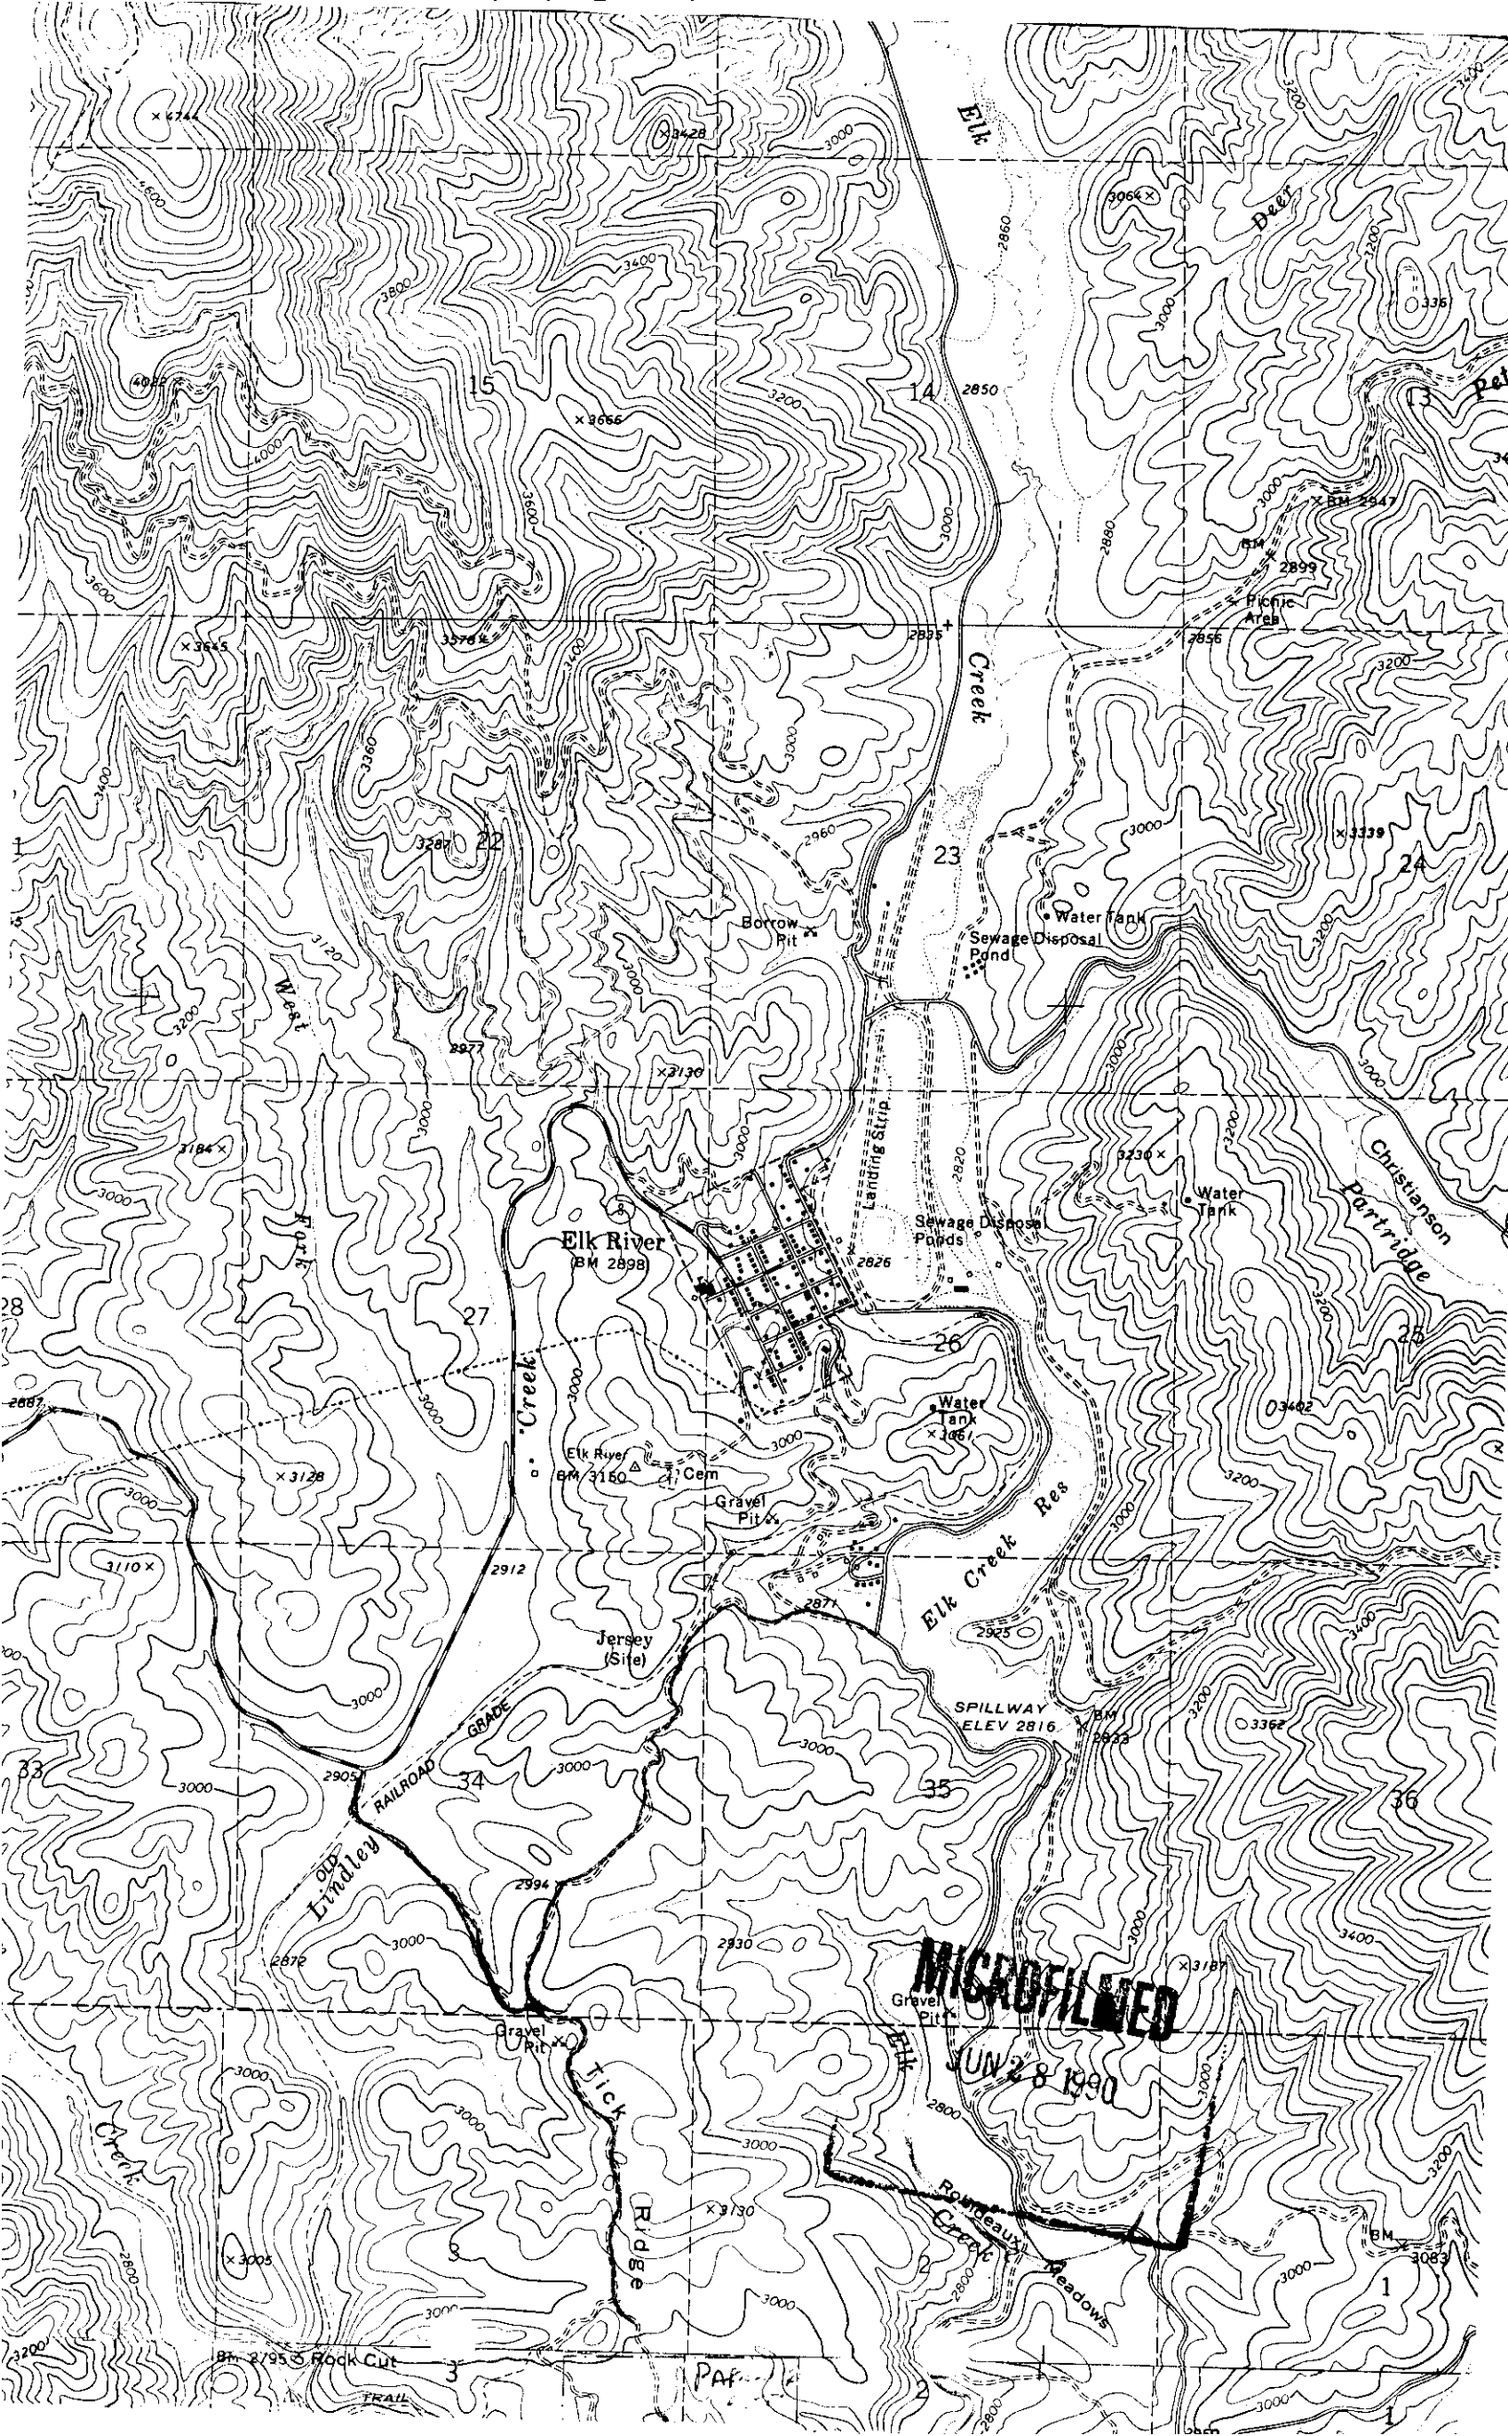

Wildlife species found in the area include such big game species as elk, deer, black bear and an occasional mountain lion. Small animal species include grouse, mink, pine marten, muskrat, wolverine, otter and fisher as well as a variety of non-game birds.

The heavily timbered lands which lie above the steeply dissected basalt canyon contain such tree species as ponderosa pine, Douglas fir, western larch, grand fir, western white pine and western red cedar. Where slopes become quite steep in the immediate falls area, soils are shallow and droughty, and support only scattered timber and grasses.

MICROFILMED
JUN 2 8 1990

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE
STATE OF IDAHO

IN THE MATTER OF APPLICATION FOR PERMIT NO. 83-7060 TO APPROPRIATE WATER	
HY-TECH COMPANY, Applicant, G. LESLIE BRITTON, et al., Protestants, and THE CITY OF ELK RIVER, Intervenor.	SOURCE: ELK CREEK COUNTY: CLEARWATER

MEMORANDUM DECISION AND ORDER

BY THE DIRECTOR

Haywood and Associates having filed Application for Permit No. 83-7060 and having assigned the application to Hy-Tech Company; protests having been filed; a hearing having been held on May 4, 1987, the Director having fully reviewed the matter and the record herein, the Director finds as follows:

MICROFILMED
JUN 2 8 1990

FINDINGS OF FACT

Substance of the Application

1. Application for Permit No. 83-7060, as amended, proposes to divert 120 cubic feet per second (cfs) for hydro-electric purposes from Elk Creek within the SW¼ NE¼, Sec. 11,

T. 39 N., R. 2 E., B.M., Clearwater County for use within the W½ NE¼, Sec. 14, T. 39 N., R. 2 E., B.M. The proposed period of use is January 1 to December 31 of each year.

Substance of the Project

2. The Hy-Tech Company, hereinafter referred to as the "applicant," proposes to construct the Elk Creek Falls Hydroelectric Project, hereinafter referred to as the "project," near the City of Elk River, Idaho. The project would use the vertical drop in a greater than one mile reach of Elk Creek and would reduce the flow of water over Elk Creek falls to a minimum of 10 cfs during about 60 percent of the year.

3. The applicant proposed several different flow regimes to maintain aesthetic values. Applicant's Exhibit 1 provides for the following flow regime:

> Hy-Tech Company, as operators of the Elk Creek Falls hydroelectric plant, shall NOT operate from: 6:30 a.m. until 8:30 p.m. on: Holidays, Saturdays and Sundays from: Memorial Day, until 1 day after Labor Day.

Mr. Sigismonti, a witness for the applicant, initially testified that the applicant would not operate the project during the daylight hours of July and August of each year. (See Tape 1.) Mr. Sigismonti later testified that the current proposal was to shut down the project for the holidays from Memorial Day to Labor Day, for a June flushing flow, for the weekends after the June flush to Labor Day, and for the daylight hours of each weekday for the months of July, after Independence Day, and of August. His statement was unclear whether the shut down for weekends was for the entire day or for the daylight hours. (See Tape 5.) Later,

MICROFILMED
JUN 20 1990

he testified that the applicant had agreed to a flushing flow of 180 cfs for a two week period in June. (See Tape 5; applicant's Exhibit 3.)

Don Biddeson, another witness for the applicant, testified that the applicant would shut down the project during the months of July and August in the daylight hours and that there would be no daytime activity during weekends and holidays in those times of the year. (Tape 3.) Later, Mr. Biddeson testified that Alternative B from applicant's Exhibit 2 was the present proposal to the Federal Energy Regulatory Commission. (Tape 3.) Applicant's Exhibit 2 describes Alternative B as follows: "entire flow will go over falls on Memorial Day, Labor Day and weekends from June 20 to August 31." Alternative B does not mention a shut down for a June flushing flow, the lack of daylight operations during the months of July and August, or the lack of daylight operations on Independence Day. The water right application also does not accurately reflect the current proposal. While the Department realizes that the applicant has proposed different flow regimes in an effort to respond to the aesthetic quality problems associated with the applicant's project, the applicant's repeated inconsistency in explaining the current proposal only serves to mislead and confuse the public in general, other interested agencies, and the Department. While the Department makes a concerted effort to clear up such inconsistencies during the hearing process, such inconsistencies may slip in when their discovery requires a cumulative review of different portions of an extensive record. The applicant failed to

MICROFILMED
JUN 26 1990

describe his project adequately.

4. The Department's best understanding of the applicant's present proposal is to shut down the project for the holidays of Memorial Day, of Independence Day and of Labor Day, for a two week period during June to provide a flushing flow, for the weekends after the June flush to Labor Day and for the daylight hours of each weekday from July 5 to the end of August.

5. The applicant proposes to construct across Elk Creek a diversion structure with a crest length of 128 feet and to install a 48" diameter penstock at the head gate in the diversion structure. The proposed penstock length is 5,068 feet and the net head at the powerhouse is about 483 feet. The powerhouse would have a capacity of 4,320 kw and would produce about 18 million kilowatt hours per year. The tailrace would empty into Deep Creek upstream from the confluence of Deep Creek and of Elk Creek. The applicant proposes also to construct a 24 kv transmission line from the powerhouse to an existing 24 kv transmission line of Washington Water Power Co. (WWP). The applicant's transmission line would be located within the corridor for the penstock for the length of that corridor. Finally, the applicant proposes to construct access roads to the project intake and to the powerhouse.

6. The applicant's diversion structure is located downstream of Elk Creek Reservoir. This reservoir is managed for recreational purposes. Storage of the natural flow of Elk Creek in Elk Creek Reservoir and the release of water therefrom would affect the flow of water at the applicant's diversion structure.

MICROFILMED
JUN 28 1990

7. The applicant executed a Power Sales Agreement with the WWP and the applicant introduced a copy of the agreement into evidence as Applicant's Exhibit 19. Section 5(d) of the contract provided that the "scheduled Operation Date of Seller's [the applicant's] Facility is October 1, 1986" and that the applicant may delay the scheduled Operation Date to December 1, 1986. Section 5(d)(2) of the contract provided that the power sales agreement would terminate if the "Operation Date" has not occurred within three months from the scheduled Operation Date as may be delayed hereunder." Accordingly, the contract between the applicant and WWP terminated prior to the Department hearing on this matter.

Protests

8. The Department received protests against approval of the amended application for permit No. 83-7060 from the following parties on the indicated dates:

PROTESTANT	DATE
Patty Hackett	April 29, 1986
Scott P. Mikolajczyk	April 30, 1986

Norman K. Whittlesly Washington State University Dept. of Ag. Economics Pullman, WA	May 7, 1986
Carole Wright Alder	May 23, 1986
Betsy Thomas	June 2, 1986

The City of Elk River later filed a Petition to Intervene for the amended application on June 3, 1986 and the Department entered an "Order Granting Intervention" on April 14, 1987. None of the other late protestants filed a petition to intervene.

10. The protestants raised the following issues in their letters of protest.

a. Whether the application was made in good faith or for delay and speculative purposes;

b. Whether the applicant has sufficient financial resources with which to complete the work; and

c. Whether the project will conflict with the local public interest.

MICROFILMED
JUN 2 6 1990

Local Public Interest

11. Elk Creek is a perennial watercourse tributary to the

North Fork of the Clearwater River. The total drainage of Elk Creek at its mouth is about 115 square miles. The drainage area above the intake for the proposed hydroelectric facility is about 45.3 square miles. The elevation varies in the Elk Creek drainage from about 1600 feet where Elk Creek flows into Dworshak Reservoir to about 5800 feet near the headwaters.

12. Stream gage records are not available for Elk Creek except for a three year period from 1981 - 1984 and some miscellaneous measurements taken in October, 1982. The applicant estimated the flow of Elk Creek by comparing flows in three nearby streams that have longer hydrographic records. The applicant concluded that the flows of the North Fork of the Clearwater River near Ahsahka, Idaho most nearly represented the flows likely to occur in Elk Creek. Using this data the applicant then derived the average monthly flow for the project site. Applicant's Exhibit 3 at Exhibit E-2.3 shows these flows. Exhibit E-2.3 shows that Elk Creek during an average year would only equal or exceed the flow of 60 cfs. throughout the months of March, April, May, June, July and December.

13. The applicant also analyzed data collected at a United States Forest Service, hereinafter abbreviated to be "U.S.F.S.", temporary stream gage on Elk Creek for the period from 1981 - 1984. Three factors reduce the usefulness of this data. First, the stream gage was located upstream from Elk Creek Reservoir. Consequently, this data does not reflect the effect of changes in storage in Elk Creek Reservoir on the flow of Elk Creek at the applicant's headgate or over the falls. Second, the U.S.F.S.

MICROFILMED
JUN 28 1990

stream gage would not measure tributary inflow between the stream gage and the applicant's headgate.[1] Third, the period from 1981 through 1984 represented an above average period in precipitation. Average stream flow would be less than the applicant's hydrographs in Exhibit 2 indicate.

14. Applicant's Exhibit 2 depicts the U.S.F.S. data in a hydrograph of the mean 10-day discharge.[2] The mean 10-day discharge equaled or exceeded 60 cfs from the 10th of November to the following 10th day of July. An analysis of this hydrograph and of the applicant's present proposed operating system indicates that the flow over the falls would be 10 cfs. for about 60 percent of the year. The only periods during which the flows would exceed 10 cfs. are the (1) holidays (3 days), (2) the two week June flushing flow (14 days), (3) weekends (22 days), (4) high flow periods of March (16 days), of April (24 days), of May (30 days) and of June (1 day) and (5) the daylight hours of weekdays of July (20 days) and of August (21 days).[3]

---

1. The applicant, in Applicant's Exhibit 7 at sheets 7 and 11 of Exhibit E-6.6 stated that the drainage basin of Elk Creek between the U.S.F.S. stream gage and the applicant's headgate was 8 KM^2 (approximately 3.1 mi^2). Consequently, the tributary inflow would not constitute a major source of inaccuracy in the use of the U.S.F.S. stream gauge data as an approximation of the flow of Elk Creek at the applicant's headgate.
2. The use of a mean 10-day discharge would tend to reduce the effect of minor fluctuations in storage in Elk Creek Reservoir.
3. This analysis assumes that there will be 8 days of weekends in July and 10 days of weekends in August as in 1987. Depending on the calendar year, the number of days of weekends in July and August could be reversed. This analysis further treats a day with flow over the falls during daylight hours as a full day. Finally, this analysis overstates the number of days in an average year that the flow would exceed 10 cfs over the falls, because the period of record was above average in precipitation.

MICROFILMED
JUN 28 1990

15. The minimum historic stream flow of Elk Creek in the protestant's monthly flow duration study at the applicant's diversion point is about 17 cfs. The applicant's proposed bypass flow of 10 cfs is about 58 percent of this minimum historic natural flow.

16. Elk Creek Falls is in fact a series of cascades. Three of the larger falls are designated as the Upper Falls, Middle Falls, and Lower Falls with heights of about 20 feet, 90-100 feet, and 60 feet respectively.[4] In addition, six other prominent but unnamed falls ranging from fifteen to thirty-five feet in height occur in the reach of Elk Creek from the Upper Falls to the Lower Falls.[5]

17. The U.S.F.S acquired the lands associated with Elk Creek Falls and Elk Creek by donation in 1933. The U.S.F.S. administers the area primarily for outdoor recreation. A 960-acre area encompassing the falls was formally designated as the "Elk River Planning Unit Land Management Plan Environmental Impact Statement."

18. The U.S.F.S. has developed a Visual Resource Management System, which provides a means of analysis of impacts on visual quality of a particular proposed project. The applicant described this process as follows:

MICROFILMED
JUN 28 1990

4. The evidence in the record is unclear concerning the exact height of the middle falls. Applicant's Exhibit 3 describes the middle falls as 90 feet in height at E2-2, E7-4, and as approximately 100 feet in height at Exhibit E-2.1 of applicant's Exhibit 3.

5. The applicant describes these other falls in applicant's Exhibit 3, at E2-1 to E2-4; Exhibit E-2.

The National Forest Visual Management System has established criteria for identifying and classifying scenic quality. This is done by defining subregions (landscape character types) that provide the framework for variety class descriptions.

Subregions are geographical areas which have similar visual characteristics of land and rock form, vegetation and water form. No single landscape feature alone determines a subregion or landscape character type; all features combine to create a certain visual image. The project area is in the Columbia Rockies Subregion.

The degrees of diversity of a subregion are called variety classes and establish a means of measuring inherent scenic quality. There are three variety classes:

Variety Class A - Distinctive
Variety Class B- Common
Variety Class C - Minimal

* * *

According to U.S. Forest Service manuals, each subregion will include all of the variety classes and in approximately the following proportions:

Variety Class A - 10 to 25 percent
Variety Class B - 50 to 80 percent
Variety Class C - 10 to 25 percent

The Clearwater National Forest staff have determined that within the Project area, the river environment is Variety Class A, surrounded by Variety Class B landscape.

Sensitivity level is the next criterion in the Visual Resource Management System process. Sensitivity levels measure people's concern for the scenic quality of the National Forests.

Three sensitivity levels identify the different levels of user concern for the visual environment:

Level 1 - Highest Sensitivity
Level 2 - Average Sensitivity
Level 3 - Lowest Sensitivity

MICROFILMED
JUN 28 1990

Two steps are involved in establishing sensitivity levels. One is ranking the importance of the travel route, use area or water body within the area of consideration from which most people view the area. The second step defines the major and minor concerns of users for the scenic qualities of the National Forest.

* * *

National Forest personnel have determined the viewer sensitivity level in the Project area to be Level 1 - Highest Sensitivity.

By combining the information about landscape variety class and sensitivity levels of forest users, the standards or objectives for the visual management goals are keyed to the values set forth in the variety classes and sensitivity levels:

P - Preservation
R - Retention
PR - Partial Retention
M - Modification
MM - Maximum Modification

Except for Preservation, each objective describes a degree of acceptable alteration of the natural landscape based on the importance of aesthetics. The degree of alteration is measured in terms of visual contrast with the surrounding natural landscape.

The National Forest staff has set the visual quality objective [VQO] for the immediate Project area as Retention. The VQO for some adjacent land is designated at Partial Retention. Descriptions of the Retention and Partial Retention standards are produced from a U.S.F.S. publication:

Retention

This visual quality objective provides for management activities which are not visually evident.

Under Retention, activities may only repeat form, line, color and texture which are found frequently in the

MICROFILMED
JUN 28 1990

characteristic landscape. Changes in their qualities of size, amount, intensity, direction, pattern, etc., should not be evident.

Duration of Visual Impact: Immediate reduction in form, line, color, and texture contrast in order to meet Retention should be accomplished either during operation or immediately after. It may be done by such means as seeding vegetative clearings and cut or fill slopes, hand planting of large stock, painting structures, etc.

Partial Retention

Management activities remain visually subordinate to the characteristic landscape when managed according to the Partial retention visual quality objective.

Activities may repeat form, line, color or texture common to the characteristic landscape, but changes in their qualities of size, amount, intensity, direction, pattern, etc., remain visually subordinate to the visual strength of the characteristic landscape.

Activities may also introduce form, line, color or texture which are found infrequently or not at all in the characteristic landscape, but they should remain subordinate to the visual strength of the characteristic landscape.

Duration of Visual Impact: Reduction in form, line, color and texture to meet Partial Retention should be accomplished as soon after project completion as possible or, a minimum, within the first year.

Applicant's Exhibit 3, at E8-2 to E8-6.

MICROFILMED
JUN 28 1990

19. The applicant's exhibits show that it has done the following to mitigate the adverse aesthetic impacts of the

project and to show compliance with the present land use plans of the U.S.F.S. The applicant redesigned the project to move the powerhouse to an area away from the Lower Falls. This action reduces the adverse visual impact of the powerhouse structure from existing viewpoints. The applicant also proposes to bury the penstock at those places where the general public would view it.

20. The U.S.F.S. still protests this project and argues that the project is not in compliance with its land use plans for the Elk Creek Falls area.

21. The Middle Falls of Elk Creek Falls are the highest falls in north Idaho. The entire Elk Creek Falls are a major scenic area within the geographic area encompassing the Lewiston-Clarkston, Moscow-Pullman, Clearwater Valley communities. Protestant's Exhibit 1 states the number of visitors that registered each day for the periods from May 25, 1985 to May 25, 1986 and from May 26, 1986 to April 26, 1987 and demonstrates the year round use that the Elk Creek Falls area receives, although the highest use occurs during April through August of each year. Total registered visitors during the first period were 3,479; total registered visitors during the second period were 4,013 for a one year increase of 39 percent. Moreover, weekend use was 55 percent of the total; weekday use was 39 percent of the total; holiday use was 6 percent of the total. The data also indicates that 81 percent of the registered visitors were from less than 50 miles distance, Lewiston/Clarkston /Moscow/Pullman/O[illegible] areas, and 19 percent of the registered visitors were from greater than

MICROFILMED
JUN 2 8 1990

50 miles distance. Finally, testimony at the hearing established that these figures understate the actual public use because some visitors do not sign the register.

22. The protestants all share a common, deeply held, opposition to the project. The protestants argued that the project will destroy the aesthetic beauty of the Elk Creek Falls. As a consequence, there is overwhelming local opposition to the project. The protestants also pointed out other potential adverse impacts of the project. Some protestants argue that the City of Elk River vitally needs the tourist trade and that dewatering the falls will drastically reduce the tourist traffic. Other protestants expressed concern about the potential erosion from the construction phase of the project and about the extension of roads into an existing roadless area. Finally, some protestants pointed to the present power surplus in the Pacific Northwest as a reason to deny this application.

23. The applicant attempted to mitigate the aesthetic quality concerns by the adoption of the measures stated in Finding 19. In addition, the applicant reduced the requested application to appropriate water from 240 cfs to 120 cfs and agreed to shut down the project during some high visitor use periods of the summer. Finally, the applicant submitted a study into evidence that shows a financial contribution to the tax base for the County of Clearwater by the construction and operation of the project.

MICROFILMED
JUN 18 1990

24. The U.S.F.S. explained the attraction of the Elk Creek Falls area well as follows: "Flowing and falling water at all

stages are the major attractive features of the area." (Protestant's Exhibit 4.) Protestant's Exhibit 1 confirms this conclusion because of the high indicated use during the high flow months of April, May and June. Accordingly, the Elk Creek Falls provide a major tourist attraction for this portion of the County of Clearwater. The residents and businesses of the community of Elk River benefit from this major tourist attraction. Though no specific quantification of these benefits was provided, a reasonable inference to be drawn from the amount of tourist traffic documented by the U.S.F.S. is that the amount of these benefits is substantial.

25. The Department made no specific findings regarding the issues stated in Idaho Code §42-203A(5)(a) - (d) (Supp.1986).

26. Matters expressed herein as a finding of fact which are later deemed to be a conclusion of law are hereby made as a conclusion of law.

CONCLUSIONS OF LAW

Based upon the findings of fact in this matter, the following conclusions of law are made:

Applicable Legal Principles

1. Idaho Code §42-203A (Supp. 1986) states the requirements that an applicant to appropriate water must satisfy for a permit. Idaho Code §42-203A(5) (Supp. 1986) states, in part, as follows:

> The director of the department of water resources shall find and determine from the evidence presented to what use or uses the water sought to be appropriated can be and are intended to be applied. In all applications whether protested or not protested,

MICROFILMED JUN 28 1990

where the proposed use is such (a) that it will reduce the quantity of water under existing water rights, or (b) that the water supply itself is insufficient for the purpose for which it is sought to be appropriated, or (c) where it appears to the satisfaction of the department that such application is not made in good faith, is made for delay or speculative purposes, or (d) that the applicant has not sufficient financial resources with which to complete the work involved therein, or (e) that it will conflict with the local public interest where the local public interest is defined as the affairs of the people in the area directly affected by the proposed use; the director of the department of water resources may reject such application and refuse issuance of a permit therefor, or may partially approve and grant a permit for a smaller quantity of water than applied for, or may grant a permit upon conditions. [Emphasis Added]

2. The Idaho Supreme Court first interpreted the local public interest standard in Shokal vs. Dunn, 109 Idaho 330, 707 P.2d 441 (1985). The Court broadly interpreted this standard and discussed the Department's role in implementing it. The Court stated:

> The Director of Water Resources has the same considerable flexibility and authority, which he has already implemented in earlier proceedings in this matter, to protect the public interest.
>
> Indeed, I.C. § 42-203A places upon the Director the affirmative duty to assess and protect the public interest.
>
> * * *
>
> The authority and duty of the Director to protect the public interest spring naturally from the statute; the more difficult task for us is to define "the local public interest." Public interest provisions appear frequently in the statutes of the prior appropriation states of the West, but are explicated rarely.

FILED
JUN 28 1990

* * *

Clearly, the legislature in §42-203A must have intended the public interest on the local scale to include the public interest elements listed in§ 42-1501: 'fish and wildlife habitat, aquatic life, recreation, aesthetic beauty, transportation and navigation values, and water quality.'

* * *

Several other public interest elements, though obvious, deserve specific mention. These are: assuring minimum stream flows, as specifically provided in I.C. § 42-1501, discouraging waste, and encouraging conservation.

* * *

The above-mentioned elements of the public interest are not intended to be a comprehensive list. As observed long ago by the New Mexico Supreme Court, the 'public interest' should be read broadly in order to 'secure the greatest possible benefit from [the public waters] for the public.'

* * *

By using the general term "the local public interest," the legislature intended to include any locally important factor impacted by proposed appropriations.

Of course, not every appropriation will impact every one of the above elements. Nor will the elements have equal weight in every situation. The relevant elements and their relative weights will vary with local needs, circumstances, and interests. For example, in an area heavily dependent on recreation and tourism or specifically devoted to preservation in its natural state, Water Resources may give great consideration to the aesthetic and environmental ramifications of granting a permit which calls for substantial modification of landscape or the stream.

Those applying for permits and those challenging the application bear the burden of demonstrating which elements of the public interest are impacted and to what degree.

MICROFILMED
JUN 2 8 1990

* * *

> The determination of what elements of the public interest are impacted, and what the public interest requires, is committed to Water Resources' sound discretion.
>
> * * *
>
> Water Resources must oversee the water resources of the state, insuring that those who have permits and licenses to appropriate water use the water in accordance with the conditions of the permits and licenses and the limits of the law. It is not the primary job of Water Resources to protect the health and welfare of Idaho's citizens and visitors-that role is vested in the Department of Health and Welfare, including compliance with the water quality regulations and monitoring effluent discharge in our state's waterways. Nevertheless, although these agencies may have separate functions, Water Resources is precluded from issuing a permit for a water appropriation project which, when completed, would violate the water quality standards of the Department of Health and Welfare. (Emphasis Added)

Shokal v. Dunn, supra, at 337-341.

3. A general rule of administrative law is that a construction of a statute by an agency charged with its administration is entitled to great weight and will be followed unless there are cogent reasons for holding otherwise. Kopp v. State, 100 Idaho 160, 163, 595 P.2d 309 (1979)..

4. IDAPA 37.0.4, 4. (1986) states in part, as follows:

> 4,4,1. Burden of proof is divided into two parts: first, the burden of coming forward with evidence to present a prima facie case, and second, the ultimate burden of persuasion.
>
> * * *

MICROFILMED
JUN 2 8 1990

4,4,2,2. The applicant shall bear the initial burden of coming forward with evidence for the evaluation of criterion (e) of Section 42-203A(5), Idaho Code, as to any factor affecting local public interest of which he is knowledgeable or reasonably can be expected to be knowledgeable. The protestant shall bear the initial burden of coming forward with evidence for those factors relevant to criterion (e) of Section 42-203A(5), Idaho Code, of which the protestant can reasonably be expected to be more cognizant than the applicant.

* * *

4,4,3. The applicant has the ultimate burden of persuasion for the criteria of Section 42-203A, Idaho Code, and the protestant has the ultimate burden of persuasion for the criteria of Section 42-203C, Idaho Code.

Application of Legal Principles

5. The conformance of the applicant's project with the local public interest standard is the critical issue for decision in this case. Shokal v. Dunn, supra, makes clear that the Department's decision requires a balancing of competing interests. (Conclusion 2.)

6. The U.S.F.S., the landowner and the major land planning agency, has developed a special land use plan for the site of the applicant's project. (Finding 17.) The U.S.F.S. argued at the hearing that the applicant's project is not in conformance with this land use plan; the applicant attempted to show by its various exhibits that the applicant's project is in conformance with this land use plan. (Findings 18, 19.) The first legal issue is to determine the appropriate role of the Department in this dispute. Compliance or noncompliance with local land use plans is not among the issues enumerated by the Idaho Supreme Court as

MICROFILMED
JUN 28 1990

a consideration in determining the local public interest. Nonetheless, the Court makes clear that their list is not comprehensive and that this standard includes "any locally important factor impacted by the proposed appropriations." (Conclusion 2.) Here, conformance with the special land use plan of the U.S.F.S. is a locally important factor impacted by the proposed appropriation, and the Department is required to consider conformance with this plan as part of its public interest determination.[6]

7. A general rule of administrative law is that the interpretation of a statute by an administrative agency charged with its administration is entitled to great weight. (Conclusion 3.) Here, a slightly different situation exists. The U.S.F.S. developed and adopted the "Elk River Planning Unit Land Management Plan Environmental Impact Statement." (Finding 17.) The interpretation and application of that plan by the U.S.F.S. is also entitled to great weight by the Department. (Conclusion 3.)

8. As stated earlier, the evidence is contradictory concerning whether the applicant's project is in conformance with the management plan. (Findings 19, 20.) The record demonstrates

---

6. This conclusion should not be read too broadly. This decision expresses no opinion regarding whether conformance with local land use plans will always be a factor in determining the local public interest. Here, the existence of a special land use plan specifically related to aesthetic and instream values requires the Department to consider conformance of the applicant's project with the plan as a part of the local public interest determination. Finally, this decision does not imply the converse of the above conclusion. A demonstration of compliance with a local land use plan does not show compliance with the local public interest standard; Shokal v. Dunn, supra requires consideration of factors that may be outside the scope of a particular plan. (Conclusion 2.)

MICROFILMED
JUN 28 1990

that this dispute involves, in part, whether the applicant's project satisfies the visual quality objective of retention. As Finding 18 makes clear, such a determination involves application of criteria in the National Forest Visual Management System. The interpretation and application of those criteria by the U.S.F.S. is also entitled to great weight by the Department. (Conclusion 3, 7.) The U.S.F.S. concluded that the applicant's project is not in conformance with the land management plan and the above criteria. (Finding 20.) The present record supports the conclusion. In summary, the Department concludes that the applicant's project is not in conformance with the special land use plan for the Elk Creek Falls area and that the Department must consider this factor, among others, in determining whether the applicant's project is in the local public interest.

9. Shokal v. Dunn, supra, also makes clear that the Department in determining the local public interest in a case like this one must consider instream and aesthetic values. (Conclusion 2.) The Elk Creek Falls area is a unique, valuable resource in north Idaho. The Middle Falls is the highest waterfall in north Idaho. (Finding 21.) The Elk Creek Falls area is a major tourist attraction during the entire year, and tourists visit the Elk Creek Falls primarily to view water flowing over the falls. (Finding 24.) The applicant's attempted mitigation is inadequate, because the applicant would operate the project during the major use periods of April and May. The U.S.F.S., the landowner, manages the Elk Creek Falls area primarily for [illegible] recreational use. (Finding 17.) Here, the applicant's project

MICROFILMED
JUN 28 1990

would reduce the flow over the falls to 10 cfs for about 60 percent of the year and this bypass flow of 10 cfs represents a flow of 58 percent of the historic minimum flow. (Findings 14, 15.) The applicant's project would largely destroy the beauty of the falls.

10. The applicant's project would produce marginal public benefits by the production of electricity and by the contribution to the tax base of the County of Clearwater. (Findings 5, 23.)

11. The applicant has the ultimate burden of persuasion for the criteria stated in Idaho Code § 42-203A (Supp. 1986). Conclusions 1, 4.) Here, the applicant has failed to satisfy that burden. The major adverse impacts of the applicant's project on a unique, natural resource in north Idaho outweigh many times the benefits provided by the applicant's project. The applicant's project is against the local public interest and Idaho Code § 42-203A(5) requires the Department to deny application for permit No. 83-7060. (Conclusion 2.)

12. Overwhelming public opposition exists to the applicant's project. (Finding 22.) This opposition and the nonconformance of the applicant's project to the Elk River Planning Unit Land Management Plan further support the Department's decision to deny application for permit No. 83-7060. (Conclusion 8.)

13. Matter herein expressed as a conclusion of law which is later deemed to be a finding of fact is hereby made as a finding of fact.

MICROFILMED
JUN 28 1990

14. The Department has made no specific findings or conclusions of law regarding the issues stated in Idaho Code § 42-203A

(5) (a) - (d) (Supp. 1986). (Finding 25.) Because of the Department's decision to deny application for permit no. 83-7060, such findings and conclusions of law are not necessary.

ORDER

Based on the foregoing findings of fact and conclusions of law, IT IS HEREBY ORDERED that application for permit No. 83-7060 is denied.

DATED This 19th day of June, 1987.

DEPARTMENT OF WATER RESOURCES
APPLICATION FOR PERMIT

DENIED DENIED

To appropriate the public waters of the State of Idaho

1. Name of applicant ~~Haywood & Associates~~ HY-TECH COMPANY Phone (208) 746-~~7300~~ 3141
   Post office address ~~2109 Broadview Drive,~~ P.O. Box 1305 Lewiston, Idaho 83501

2. Source of water supply Elk Creek which is a tributary of Clearwater River

3. Location of point of diversion is ~~NW~~ SW ¼ of ~~SW~~ NE ¼ of Section 11 Township 39 N Per Elk Creek Falls EA Received 4/7/86
   Range 2 E B.M. Clearwater County, additional points of diversion if any:
   NONE

4. Water will be used for the following purposes:
   Amount ~~240~~ 120 CFS (max) for hydroelectric purposes from Jan. 1 to Dec. 31 (both dates inclusive)
   (cfs
   Amount _____ for N/A purposes from _____ to _____ (both dates inclusive)
   (cfs or acre-feet per annum)
   Amount _____ for _____ purposes from _____ to _____ (both dates inclusive)
   (cfs or acre-feet per annum)
   Amount _____ for _____ purposes from _____ to _____ (both dates inclusive)
   (cfs or acre-feet per annum)

5. Total quantity to be appropriated:
   a. ~~240~~ 120 (max) cubic feet per second and/or b. ------- acre-feet per annum.

6. Proposed diverting works:
   a. Description of ditches, flumes, pumps, headgates, etc. Diversion around Elk Creek Falls to penstock, through a 2,150 kw turbine and discharge back to Elk Creek below Elk Creek Falls. Penstock length approximately 1,000 feet.
   b. Height of storage dam N/A feet, active reservoir capacity _____ acre-feet; total reservoir capacity _____ acre-feet, materials used in storage dam: _____
   Period of year when water will be diverted to storage _____ (Month/Day) to _____ (Month/Day) inclusive.
   c. Proposed well diameter is N/A inches; proposed depth of well is _____ feet.

7. Time required for the completion of the works and application of the water to the proposed beneficial use is 4 years *(minimum 1 year – maximum 5 years).*

8. Description of proposed uses:
   a. If water is **not** for irrigation: W 1/2 NE
      (1) Give the place of use of water: ~~NW~~ NE ¼ of ~~SW~~ SW ¼ of Section ~~11~~ 11 Township 39 N
      Range 2 E B.M.
      (2) Amount of power to be generated: 2,882 (peak) horsepower under 260 feet of head.
      (3) List number of each kind of livestock to be watered N/A
      (4) Name of municipality to be served N/A, or number of families to be supplied with domestic water _____.
      (5) If water is to be used for other purposes describe: N/A

MICROFILMED
JUN 28 1990

b. If water is for irrigation, indicate acreage in each subdivision in the tabulation below: N/A

TWP	RANGE	SEC.	NE¼				NW¼				SW¼				SE¼				TOTALS
			NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	NE¼	NW¼	SW¼	SE¼	

Total number of acres to be irrigated 0

c. Describe any other water rights used for the same purposes as described above. NONE

9. a. Who owns the property at the point of diversion U.S. Forest Service

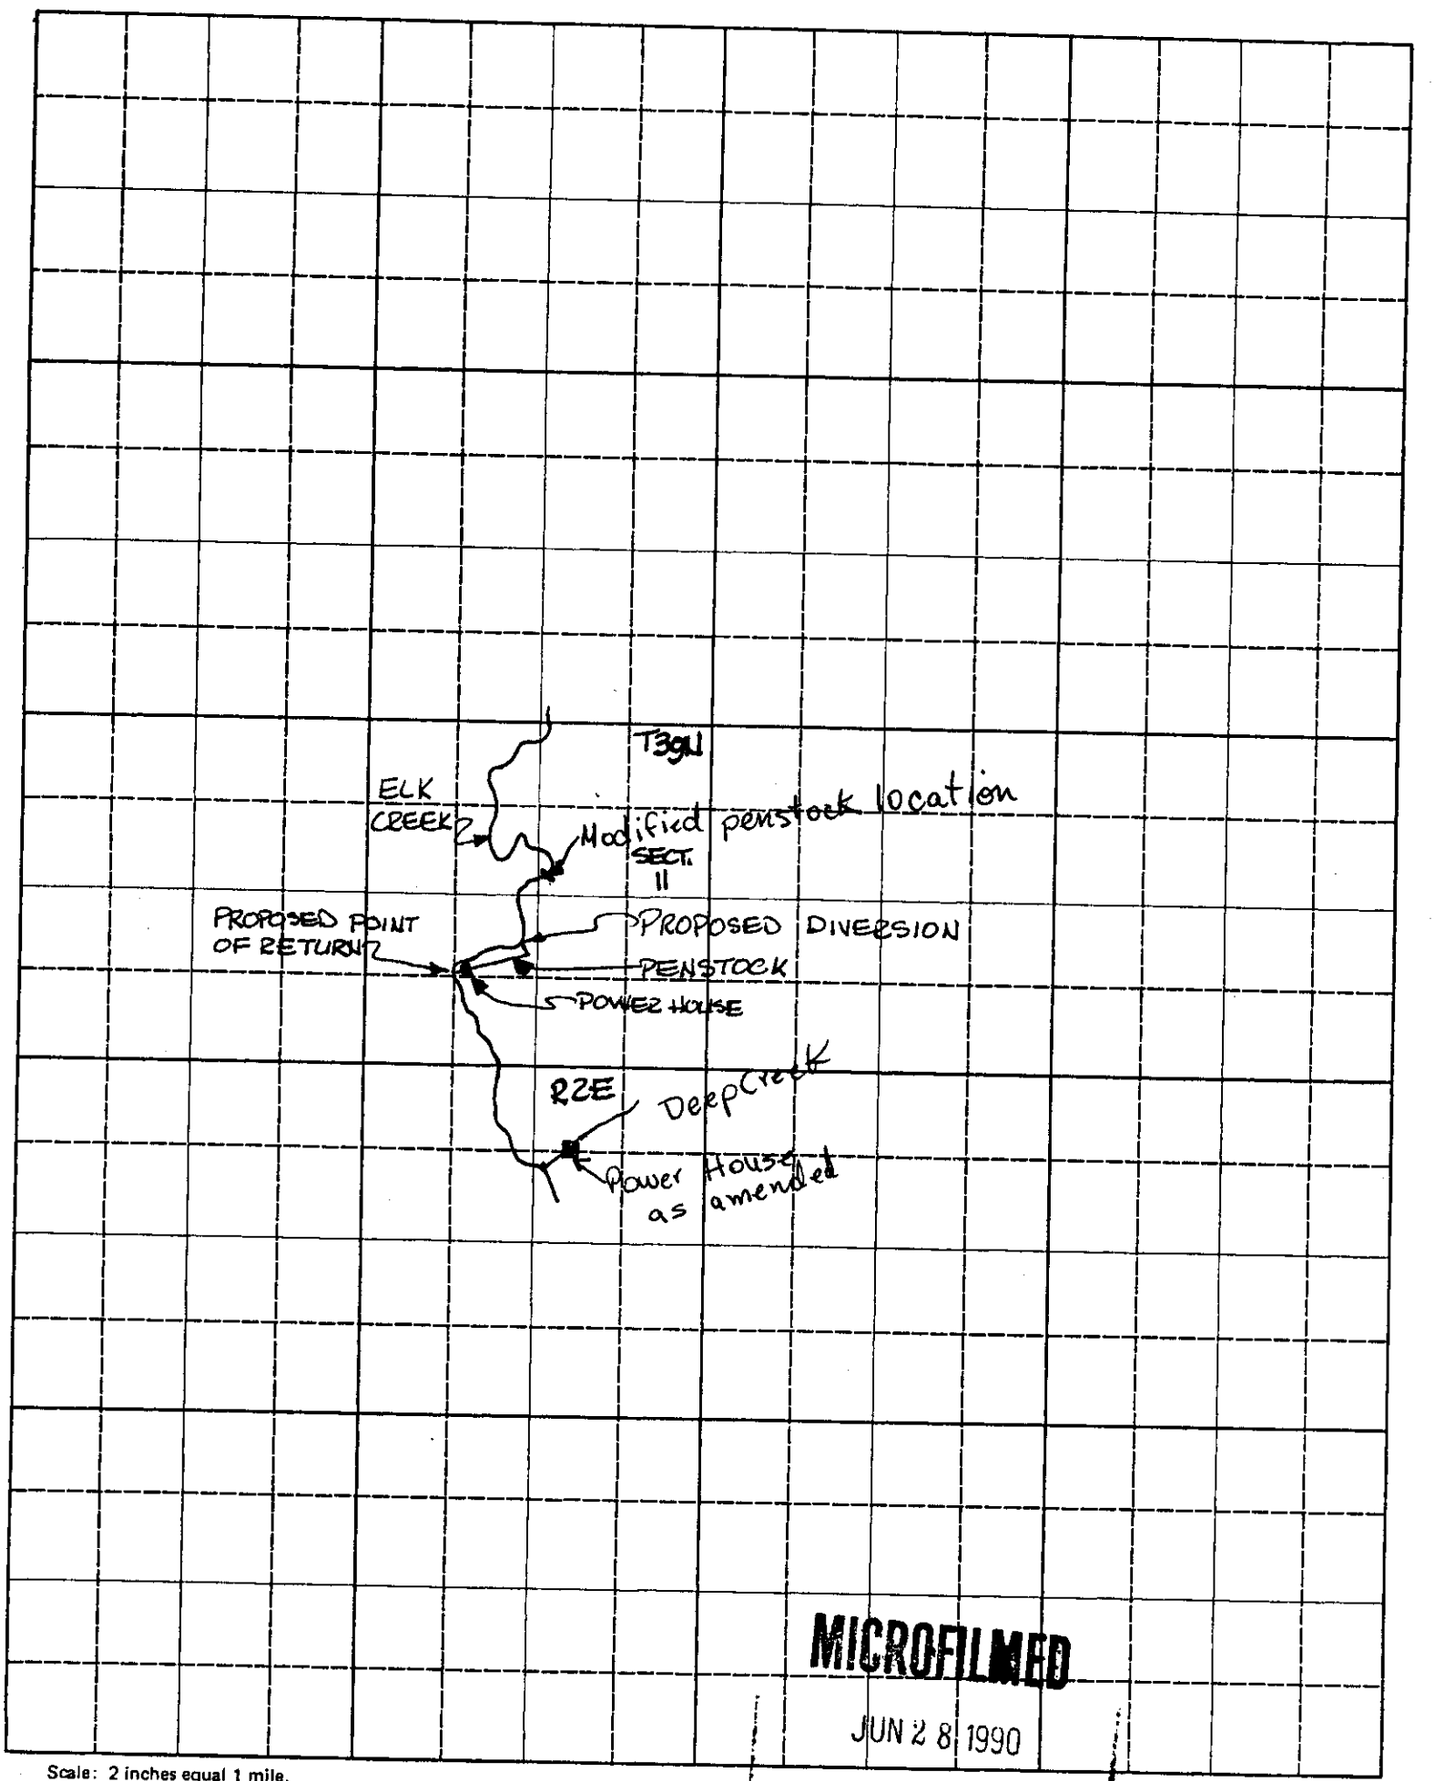

b. Who owns the land to be irrigated or place of use N/A

c. If the property is owned by a person other than the applicant, describe the arrangement enabling the applicant to make this filing the necessary permits for road construction, power line construction and other access needs will be obtained from the appropriate agencies (U.S. Forest Service, State F & G, County P & Z, etc.)

10. Remarks The 240 cfs represents the 10 percent exceedence level on the Elk Creek flow duration curve. The water will be diverted around Elk Creek Falls through a 1000-foot-long penstock and will be returned to the Creek after passing through the hydroelectric facilities. No water will be consumed or lost. Water quality will not be degraded and the project will have little or no impact on downstream use of the resource. An application for an exemption will be filed with the Federal Energy Regulatory Commission. If the exemption is granted, a special use permit from the U.S. Forest Service will not be required. An application for a special use permit has not been filed pending a decision from FERC on the exemption.

ACTION OF THE DIRECTOR, DEPARTMENT OF WATER RESOURCES

This is to certify that I have examined Application for Permit to appropriate the public waters of the State of Idaho No. 83-7060, and said application is hereby DENIED.

1. Approval of said application is subject to the following limitations and conditions:

   a. SUBJECT TO ALL PRIOR WATER RIGHTS.

   b. Proof of construction of works and application of water to beneficial use shall be submitted on or before _____, 19____.

   c. The rate of diversion, if water is to be used for irrigation under this permit, when combined with all other water rights for the same land shall not exceed 0.02 cubic feet per second for each acre of land.

   d. Other: Pursuant to Memorandum Decision and Order dated June 19, 1987.

Dated this 19th day of June, 1987.

IDPR #1

Elk Creek Falls Use Data 1985-present

Numbers taken from Visitor Sign up sheets at Falls trailhead. Because of the way some visitors sign in, some estimations have been made.

Time Period	Number Visitors Signed In
5/25/85-5/25/86	3479
5/26/86-5/25/87	4703
5/26/87-5/26/88	3915
5/27/88-5/26/89	4414
5/27/89-present (9/24/89)	3923

(By extrapolating winter use from past years, the projected use for 89-90 would be estimated to be approximately 4950 visitors)

Based on the above figures, including the estimated 89-90 use, the average number of visitors signing in on an annual basis is approximately 4292.

From earlier visitor counts using an electronic counter, the percentage of visitors signing in is approximately 78%. Based on this percentage and the average number of visitors signing in annually, the estimate for the average number of users for the past five years is approximately 5503 per year.

TESTIMONY FOR INFORMATION MEETING ON
WATER RIGHT APPLICATION 83-7099
June 21, 1989

INTRODUCTION

I am C.C.Warnick an Emeritus Professor of Civil Engineering. During my career I have taught and conducted research on water resources planning and management. I have been involved in water studies in Idaho for more than 40 years. For at least 10 years I have been involved in studies, in advising, and in hearings related to hydropower development on Elk Creek, the stream under of concern in the application under consideration. I have served as advisor to the community Elk River and have advised three different engineering firms on special aspects of the water and related resources of the Elk Creek Falls power development. I appeared for the town of Elk River in oppositiopn to the water right application of the developer on FERC Project No. 6524. Today I appear as a private citizen and as a representative of Baldwin Hydropwer Corporation, a small hydropower development firm in Idaho.

TESTIMONY

I wish to testify in behalf of the application both postively and negatively, hopefully contructive to your purposes. The testimony is grouped in four concerns as follows:

1. First, I question the wording of your application on the purposes and reason for granting a water right. If it is the Idaho Water Resource Board's desire and intent to represent the "public interest" of the State for a beneficial use it should be so stated. To elaborate on this, I would like to illustrate how "public interest" varies in different situations, by mentioning the way water rights were treated in the water rights hearings on for FERC Project No. 6524 and on the Orofino Falls Power development. In the first case, the reach of the stream involved is on public land and is designated as a recreation area by the U.S Forest Service. Numerous public petitions and expressions have been made of the desire to retain the scenic and recreational values of the reach of the stream involved. The Director of the Idaho Department denied the application on the grounds that the hydropower development was not as important a beneficial use as the public interest in scenic and recreational concerns. On the other hand, at Orofino Falls the land involved and the viewing opportunity for scenic beauty and rereational use is available only on private land. The Director of the Idaho Department of Water Resources in that case ruled in favor of hydropower development, apparently deciding that public interest had not been demonstrated as being important as a beneficial use. It is important that each site be considered on its own merits and that information be presented to allow the

FILED
JUN 28 1990

decision to be made in a prudent manner. I hope information presented as this meeting will be explicit to define that public interest.

2. If it is the intent of the Idaho Water Resource Board to prevent further action of the developer of FERC Project No. 6524 from perfecting a hydroelectric license on the reach of the river designated in this application, I am in sympathy with the Board. To help achieve this goal, I recommend that the Board file an ammendment to the present Northwest Power Planning Council's "unprotected" from hydropower development clasification on the reach of Elk Creek described in Application No 83-7099 to clasify the reach as "protected". It is my understanding that the Northwest Power Planning Council will consider ammendments in September under newly developed rules for the ammendment process. This may be a quicker action than the appropriation process. Perhaps both actions should go forth, in light of the uncertainty as to how the Federal Eenergy Regulatory Commission might treat such State action. There seems to be a difference of oppinion between the State of Idaho, along with other Western states, and FERC on this issue of state and federal water rights. Please give this attention, if for nothing more than to help define jurisdiction responsibilities.

3. In following out the intent of Chapter 370 of the 1988 Session laws, the Idaho Water Resource Board is required to prepare a comprehensive water plan for the streams of the state. My concern is that studies have not been made in a comprehensive way in this basin in cooperation with all other state agencies concerned. For example, studies should be made to determine the feasibility of putting in upstream storage and enlarging the capacity of Elk Creek Reservoir to prolong the life of the Reservoir and enhance recreational use in the area. Storage water for water budget flows in the Snake and Columbia Rivers for flushing anadromous fish down the rivers is a very real need and additional storage on Elk Creek might provide some of the needed water, but a different schedule of minimum flows would be required. Comprehensive implies that all uses be considered, and that should include possible hydropower development that might be acceptable to the public and preserve the scenic values of Elk Creek Fallls. I agree that development under FERC Project No. 6524 is not acceptable. If the Idaho Water Resource Board decides that a water right application with restrictive instream flow for preventing hydropower development is the action that should be taken, I recommend that they specify a limited term for those restrictions so that if comprehensive use studies indicate that a different instream flow restraint would be more prudent a change can be made in the future.

4. The stated wording of the proposed minimum instream flow, "amount of and period of use: 40 CFS from July 1 through February 29; 120 CFS from March 1 through June 30," is confusing. Does this mean the streamflows can never be allowed to be less than the

RECEIVED
JUN 28 1990

amount specified? Historically the flows of the stream in this reach are frequently less than those amounts during these times. On the basis of the fact that the minimum flows are unobtainable it appears to be wise to revise the wording quantifying the instream minimum flow figures.

There is already a reservoir on the stream that has regulated the natural flow. The proposed minimum flows may inhibit the most beneficial use of the reservoir. Has the Idaho Water Resource Board considered the concerns of the Idaho Fish and Game Department, the Recreational District, and the public uses of the waters of the stream? They should consider the existing reservoir use and potential for expansion and what a minimum flow might do to possible water uses for all purposes.

I believe better wording should be developed for expressing the quantification of the minimum instream flows for this reach of Elk Creek. I would be willing to work with the Idaho Water Resource Board and their staff to reach better wording. I have flow estimates in the form of monthly flow duration curves that may not be readily available to the Board that would be helpful in defining the quantification and time periods of restraint.

TESTIMONY FOR HEARING MEETING ON
WATER RIGHT APPLICATION 83-7099
October 12, 1989

INTRODUCTION

I am C.C.Warnick an Emeritus Professor of Civil Engineering. During my career I have taught and conducted research on water resources planning and management. I have been involved in water studies in Idaho for more than 40 years. For at least 10 years I have been involved in studies, in advising, and in hearings related to hydropower development on Elk Creek, the stream of concern in the application under consideration. I have served as advisor to the community Elk River and have advised three different engineering firms on special aspects of the water and related resources of the Elk Creek Falls power development. I appeared for the town of Elk River in oppositiopn to the water right application of the developer on FERC Project No. 6524. Today I appear as a private citizen and as a representative of Baldwin Hydropwer Corporation, a small hydropower development firm in Idaho.

TESTIMONY

I wish to submit a copy of my testimony presented at the information meeting the Idaho Water Resources Board held in June in Moscow, Idaho. I wish to ask again that the purpose of the water right application be changed to read for the "public interest" for beneficial uses in the form of scenic and recreational opportunities and for the retention of fish and wildlife uses. This public interest has been demonstrated by the numerous expressions from the public.

I would recommend that the wording and designation for minimum flow read as follows:

1. 40cfs from July 1 through February 29 or the historic unregulated natural flow less than 40 cfs that occurs during the specified period.
2. 120cfs from March 1 through June 30 or the historic unregulated natural flow less than 120 cfs that occurs during the specified period.

To support this change in wording I would like to submit three graphs that justify my desire for a change in wording.

I would ask again that an ammendment petition be filed to change the status of this reach of Elk Creek from "unprotected" to "protected" under the rules of the Northwest Power Planning Council. It would appear to be the responsibility of the Idaho Department of Parks and Recreation and the Idaho Fish and Game Department to initiate this action. It is my undersstanding that this should be filed by November 1, 1989 to be in compliance with recent rules of the Northwest Power planning Council.

Federal Energy Regulatory Commission
825 N. Capital Street, N. E.
Washington, D. C. 20426

Re: Project 6524-005 OHL-PM, Hy-Tech Company
Supplemental Filing

Dear Mr. Plumb,

There has been a series of meetings between Applicant and the U.S. Forest Service, the City of Elk River, Elk River Recreation District, and the Elk River Chamber of Commerce, reviewing the special needs of this project. The enclosed project Drawings reflect the requested changes, by these agencies, to the Elk Creek Falls project. Since these changes were initiated at the request of these agencies, we feel that this doesn't constitute a change in our license application. These changes reflect careful engineering to conform to the agencies desire to maintain the visual quality within the Falls area, and to enhance the fish and wildlife.

The project configuration now removes any unsightly penstock, powerhouse or roads from any viewing areas of the Falls. The changes in configuration forced changes in the location, size and shape of the intake, the route of the penstock and the location of the powerhouse. These changes are reflected in the attached Project Drawings. Copies of correspondence and meeting records with these agencies are also enclosed.

Sincerely Yours,

R. A. Sigismonti
Managing Partner

REQUESTED MODIFICATIONS:

INTAKE

Intake Top Level:	El 2,683
Height of Intake:	20 ft.
Crest Length:	128 ft.
Intake with Guard-gate:	48"
Outlet:	16" with sluice gate
Impoundment:	20,000 cu. ft.
Area of Impoundment:	3.7 Acres

REASON:
In order for the penstock to be hidden by a natural screen of brush and trees as early as possible in it's route, the height of the intake must be increased to 20 feet. At this new height, the penstock avoids problem viewing areas near the upper falls, and is well screened from any views.

POWERHOUSE

Net Head:	482.8 ft.
Turbine Flow:	120 csf
Capacity:	4,320KW
Penstock Length:	5,068ft.
Penstock Diameter:	48"
Penstock at Intake:	EL 2,676
Penstock at Powerhouse:	EL 2,168
Turbine, Horizontal Francis:	One Turbine
Power Production:	18,985,000 kwh

REASON:
The required movement of the penstock and powerhouse, away from the lower falls, mandated an extensive southeasterly move. The new powerhouse location is about 1 mile Southeast from the lower, and most heavily viewed falls. The Powerhouse is not within any viewing area and is about 1.5 miles away from the lower falls. The tailrace will empty into Deep Creek prior to Deep Creeks confluence with Elk Creek. This everyone agrees will have no impact on the stream reach or fish habitat.

ROADS:
The enclosed map clearly demonstrates that the roads are outside any possible viewing area. The roads also follow a natural slope and will be built according to USFS specifications, and inspection.

CERTIFICATE OF SERVICE

I hereby certify that I have this day served the foregoing document upon all parties of record in this proceeding in accordance with the requirements of Section 1.17 of the Rules of Practice and Procedure.

RECEIVED
OCT 30 1989
Department of Water Resources

Oct. 25, 1989

To: Gary Spackman,
State of Idaho,
Department of Water Resources

From: Gerry Snyder Gerry Snyder

Subject: Minimum Instream Flow Application on Elk Creek, No. 83-7099

The enclosed is submitted for the record on application no. 83-7099.

It has been the consent of the public to halt any hydroelectric development at Elk Creek Falls. This is a good faith effort on behalf of Dept. of Water Resources to ensure that future public enjoyment of Elk Creek Falls will not be hampered by destruction of this natural resource. Regrettably, this effort only affects future activities and does not protect the current prospects of the HyTech company.

It is ever important that sound information back the recommendations set forth by the Department. As defined by definition, "The instream flow right is the minimum flow ... necessary to protect the fish and wildlife habitat, water quality, etc. of the stream.". It is the responsibility of the department that recreational benefits be included under the "etc." to take into account the scenic attributes associated with instream flow. This particularly applies to a stream segment whose area management language states that it be managed as a "scenic recreational area."

An initial plea was earlier requested for help at Elk Creek Falls. This latest submission is on behalf for formal public record.

I endorse the concept of flow rates at 40 and 120 cfs and look forward to working with the Department of Water Resources on any future issues at Elk Creek Falls.

November 22, 1988

Mr. Gerry Snyder, President
Moscow Chapter, Idaho Conservation League
206 East Morton Street
Moscow, ID 83843

Dear Mr. Snyder:

As indicated in my November 10, 1988, letter I have asked the Department of Water Resources for information concerning the status of the proposed Elk Creek Falls hydroelectric power project.

As you are aware, this project was rejected by both the Federal Energy Regulatory Commission (FERC) and the Idaho Department of Water Resources (IDWR). However, FERC reinstated the license application on a representation by the applicant that the project has been redesigned to avoid impact to the environment. On April 18, 1988, the District Court entered an order remanding the matter to IDWR for the taking of further evidence in connection with the water right application. IDWR has not yet scheduled further hearings on the matter. It has recently granted a motion to intervene filed by the Elk River Recreation District to allow for public interest participation in any future proceeding.

I am hopeful that the individuals who have expressed interest in this matter, as evidenced by the petitions included with your letter to me, would find an opportunity for representation through either the Recreation District or the town of Elk River, which is also a party to the matter.

Let me assure you that the application for the hydropower project will be given careful consideration by the IDWR before a decision is made as to whether to change the previous action, which was [illegible] in the public interest.

JUN 28 1990

For further information on this matter I suggest you keep in touch with R. Keith Higginson, Director, Idaho Department of Water Resources, Statehouse Mail, Boise, ID 83720.

With best regards,

Sincerely,

Cecil D. Andrus
Governor

Senator Symms
Representative Craig
Richard Sigsimonti- Hy Tech

MICROFILMED
JUN 28 1990

-The diversion dam, the 5,000 foot penstock, the generating plant, the access roads, and the transmission lines will adversely impact the natural conditions and character of the Elk Creek Falls area. The Clearwater National Forest has designated this area as natural recreation and research, the hydroelectric project would ruin and change the natural and scenic status of the area.

-FERC should hold a public hearing on this project and it should be held in a population center such as Moscow, Idaho. The majority of users at Elk Creek Falls comes from Latah County in which Moscow is the county-seat.

-Because of low summer flows on Elk Creek, the project will not be able to produce power during the high demand summer months (same applies to winter) when it is needed most. Peak stream flow and power production occurs in the spring when electrical demand is not at a premium.

-The minimum stream flow of 10 cubic feet per second which the proposed project will allow to pass is inadequate to maintain the natural ecosystem. This is an Idaho state at large designated stream flow minimum which does not realistically address the conditions at Elk Creek and its normally greater stream flows.

-There has never been an official fish or wildlife study on the impact of this project other than by the developer. The Idaho Fish and Game and other related agencies need to do independent studies on resource impacts as well as existing conditions.

-The alternatives submitted by the developer are not acceptable. The developer did not work with any people that use the Elk Creek Falls area and thus submitted alternatives that reflected their own selfish benefits.

-The land and water belong to all the public and should not be diverted only for the financial profit of a few indivuals. The National Forest land is public land should benefit all who use it. The hydro-project would benefit a select few and would greatly damage those benefits and values of the general public.

-A foreign engineering company would be doing the construction, thus the cost of development would be lost to Idaho's economy. This project would clearly not enhance both local and state economy if enacted.

-The developer has a questionable financial ability or track record to carry out such a large and expensive project. Through their pursuit of a low government loan and tax breaks, we view this as another government bail out and further incentive to destroy Elk Creek Falls.

MICROFILMED
JUN 28 1990

-There are no provisions for the developer to pay for the costs of rehabilitating the area if he should abandon the project or any portion of it during construction or during the project's lifespan. There just isn't any safe-guards in protecting the land once the developer ceases to use the project.

In summary, these facts and concerns show our reasons to oppose any hydroelectric project at Elk Creek Falls. Besides the Idaho Conservation League's (Idaho's largest conservation group) position on this proposed project, the public at large also share our opposition as well as the Clearwater National Forest, Elk Creek Falls Committee, the Sierra Club, the town of Elk River(and its city council), former Governor John Evans, and even current Governor Cecil Andrus. We simply ask of FERC to deny a permit for hydroelectric development at Elk Creek Falls and to put this project (#6524) to rest.

Sincerely,

Gerry Snyder

Gerry Snyder
President
Idaho Conservation League-
Moscow Chapter
206 East Morton St.
Moscow Idaho 83843

MICROFILMED
JUN 2 8 1990

SAVE ELK CREEK FALLS

We the undersigned, believe the hydroelectric project proposed at Elk Creek Falls should not be built. It would destroy one of our region's most popular recreation attractions and hurt the recreation economy of the local area.

It is opposed by the overwhelming majority of Idahoans living in the local area and region. The energy from the project is not needed. The project has already been denied once by federal and state agencies, and is still opposed by the Forest Service.

Now, for no good reason, the project is alive again.

We ask: Senators McClure and Symms, and Congressman Craig, to publicly oppose the project; the Federal Energy Regulatory Commission to deny, once and for all, any license for this project; the Idaho Water Resources Board to deny, once and for all, the water right permit for this project; the Clearwater National Forest to deny any special use permit requested for the project.

SAVE ELK CREEK FALLS

We the undersigned, believe the hydroelectric project proposed at Elk Creek Falls should not be built. It would destroy one of our region's most popular recreation attractions and hurt the recreation economy of the local area.

It is opposed by the overwhelming majority of Idahoans living in the local area and region. The energy from the project is not needed. The project has already been denied once by federal and state agencies, and is still opposed by the Forest Service.

Now, for no good reason, the project is alive again.

We ask: Senators McClure and Symms, and Congressman Craig, to publicly oppose the project; the Federal Energy Regulatory Commission to deny, once and for all, license for the project; the Idaho Water Resources Board to deny, once and for all, the water rights permit for this project; the Clearwater National Forest to deny any special use permit requested for the project.

RECEIVED
NOV 28 1988
Department of Water Resources

Secretary Kenneth Plumb
Federal Energy Regulatory Commission
825 North Capital St. NE
Washington, D.C. 20426

Dear Mr. Plumb;

This letter is written on behalf of the Idaho Conservation League. The intent of our comments is to express complete opposition to FERC Project 6524; the proposed Elk Creek Falls hydroelectric project by Hytech Inc.. In addition, the Idaho Conservation League requests a public hearing in Moscow, Idaho, if FERC is inclined to grant a permit for hydroelectric development at Elk Creek Falls.

The following is our list of reasons to oppose a hydro-electric project at Elk Creek Falls:

-Elk Creek Falls is North Idaho's most visited waterfalls and one of the largest and most scenic. There is no other waterfalls in our region that possess such outstanding year-round qualities.

-The hydropower project would essentially ruin the attraction of the falls to tourist and thus adversely affect the local economy. Even though Elk Creek Falls is located in Clearwater County, the majority of its users come from other counties and out of state.

-Elk Creek Falls is less than 20 miles from Dworshak Reservoir which contains a large hydroelectric generating plant which is producing at much less its given operating capacity(50-70%). It would be wiser to increase electricity production at Dworshak Dam before constucting any new hydro-project in the area.

-There is clearly no demonstrated need for the electricity that this new project would generate. Currently the Pacific Northwest has an energy glut where much more power is being produced than what is needed.

-Washington Water Power has unwillingly given an attractive high price for generated power to Hytech which is the only reason the hydro-project would be built. Current market rates are almost 3 cents cheaper(per kilowatt) than what is being offered making this project unfair to all WWP ratepayers who have to pay extra for the power and increases regional rates.

SAVE ELK CREEK FALLS

We the undersigned, believe the hydroelectric project proposed at Elk Creek Falls should not be built. It would destroy one of our region's most popular recreation attractions and hurt the recreation economy of the local area.

It is opposed by the overwhelming majority of Idahoans living in the local area and region. The energy from the project is not needed. The project has already been denied once by federal and state agencies, and is still opposed by the Forest Service.

Now, for no good reason, the project is alive again.

We ask: Senators McClure and Symms, and Congressman Craig, to publicly oppose the project; the Federal Energy Regulatory Commission to deny, once and for all, any license for this project; the Idaho Water Resources Board to deny, once and for all, the water right permit for this project; the Clearwater National Forest to deny any special use permit requested for the project.

DEADLINE OCT 17

SAVE ELK CREEK FALLS

We the undersigned, believe the hydroelectric project proposed at Elk Creek Falls should not be built. It would destroy one of our region's most popular recreation attractions and hurt the recreation economy of the local area.

It is opposed by the overwhelming majority of Idahoans living in the local area and region. The energy from the project is not needed. The project has already been denied once by federal and state agencies, and is still opposed by the Forest Service.

Now, for no good reason, the project is alive again.

We ask: Senators McClure and Symms, and Congressman Craig, to publicly oppose the project; the Federal Energy Regulatory Commission to deny, once and for all, any license for this project; the Idaho Water Resources Board to deny, once and for all, the water right permit for this project; the Clearwater National Forest to deny any special use permit requested for the project.

SAVE ELK CREEK FALLS

We the undersigned, believe the hydroelectric project proposed at Elk Creek Falls should not be built. It would destroy one of our region's most popular recreation attractions and hurt the recreation economy of the local area.

It is opposed by the overwhelming majority of Idahoans living in the local area and region. The energy from the project is not needed. The project has already been denied once by federal and state agencies, and is still opposed by the Forest Service.

Now, for no good reason, the project is alive again.

We ask: Senators McClure and Symms, and Congressman Craig to publicly oppose the project; the Federal Energy Regulatory Commission to deny, once and for all, any license for this project; the Idaho Water Resources Board to deny, once and for all, the water right permit for this project; the Clearwater National Forest to deny any special use permit requested for the project.

SAVE ELK CREEK FALLS

We the undersigned, believe the hydroelectric project proposed at Elk Creek Falls should not be built. It would destroy one of our region's most popular recreation attractions and hurt the recreation economy of the local area.

It is opposed by the overwhelming majority of Idahoans living in the local area and region. The energy from the project is not needed. The project has already been denied once by federal and state agencies, and is still opposed by the Forest Service.

Now, for no good reason, the project is alive again.

We ask: Senators McClure and Symms, and Congressman Craig, to publicly oppose the project; the Federal Energy Regulatory Commission to deny, once and for all, any license for this project; the Idaho Water Resources Board to deny, once and for all, the water right permit for this project; the Clearwater National Forest to deny any special use permit requested for the project.

SAVE ELK CREEK FALLS

We the undersigned, believe the hydroelectric project proposed at Elk Creek Falls should not be built. It would destroy one of our region's most popular recreation attractions and hurt the recreation economy of the local area.

It is opposed by the overwhelming majority of Idahoans living in the local area and region. The energy from the project is not needed. The project has already been denied once by federal and state agencies, and is still opposed by the Forest Service.

Now, for no good reason, the project is alive again.

We ask: Senators McClure and Symms, and Congressman Craig, to publicly oppose the project; the Federal Energy Regulatory Commission to deny, once and for all, any license for this project; the Idaho Water Resources Board to deny, once and for all, the water right permit for this project; the Clearwater National Forest to deny any special use permit requested for the project.

SAVE ELK CREEK FALLS

We the undersigned, believe the hydroelectric project proposed at Elk Creek Falls should not be built. It would destroy one of our region's most popular recreation attractions and hurt the recreation economy of the local area.

It is opposed by the overwhelming majority of Idahoans living in the local area and region. The energy from the project is not needed. The project has already been denied once by federal and state agencies, and is still opposed by the Forest Service.

Now, for no good reason, the project is alive again.

We ask: Senators McClure and Symms, and Congressman Craig, to publicly oppose the project; the Federal Energy Regulatory Commission to deny, once and for all, any license for this project; the Idaho Water Resources Board to deny, once and for all, the water right permit for this project; the Clearwater National Forest to deny any special use permit requested for the project.

MAR 28 1990

We, the undersigned, strongly oppose any plans for a hydroelectric power plant at Elk Creek Falls. We feel that any such project would destroy the unique scenic and recreational quality of the Falls area.

We, the undersigned, strongly oppose any plans for a hydroelectric power plant at Elk Creek Falls. We feel that any such project would destroy the unique scenic and recreational quality of the Falls area.

STATE OF IDAHO
IDAHO WATER RESOURCE BOARD
STATEHOUSE
BOISE ID 83720

PROOF DUE NOTICE

RE: PERMIT NO. 83-07099

Dear Permit Holder:

One of the conditions of approval of the above referenced water permit was that proof of the extent of your beneficial use must be submitted to this office on or before April 1, 2000. (See last page of your approved permit or your last approved extension request.) Enclosed is a form which when accompanied by the license examination fee or a complete field examination report prepared by a certified water right examiner may be used to submit the required proof.

If you have not fully completed your project, and you or a previous owner of this permit have not received a prior extension of time, you may request an extension of time if the delay is for reasonable cause as provided in Section 42-204, Idaho Code. If you have been prevented from proceeding by a governmental agency or by litigation which might bring title to the water in question, more than one extension of time can be granted. An extension of time request form is enclosed for your convenience.

Either an acceptable proof of beneficial use submittal or an acceptable request for an extension of time must be received by this department on or before the above described proof due date. If neither is received, the department will send you a lapse notice. Within sixty (60) days of the mailing of the lapse notice, the permit will no longer be of any force nor effect.

SINCERELY,

JULIE L. YARBROUGH
Senior Secretary
