Dear Mr. Alred

I am writing to you concerning a application for a water permit which has been approved. The permit number is 84-7048. Along with the application and approval that I received a special condition requireing a measurement of the systems diversion capacity prior to submitting proof of beneficial use of water, was asked for. I called your Boise office of water resources and talked to a Mr. Bill McAlister to see just what was needed? We discussed it and he suggested that I drop you a line and explain to you that our well produces a flow of approx. 26 gpm. He seemed to think that with that small of a flow the special condition would not apply. As I understand it the reason for this condition is that when a large flow over so many gal. is being diverted this is when you require a measurement.

I'll explain our system to you a little so you will have a little better insight as to what we have. We had the well drilled by Aqua Drilling and Developement Inc. and the drill log shows the flow to be approx 21gpm. We had a registered Engineer Emil Rodakowski design the system for us. Because we are furnishing water for 14 parcells we had to have a approval of the Idaho state health department of the system, which we do have. Shortly after we drilled the well we had a pump installed and two city type meters put on the line. We pumped the well for three days and the results showed to be approx. 26gpm. We removed the meters, installed our water lines and built a 10,000 gal reservoir. This system has been working for several months now. We have sold several of the lots and want to turn this system over to a water Corp. for continued operation and maintainence. But first we want to have everything in order before we do so.

Would you please advise me as soon as possible by both letter and phone. Ph 208-476-5548

Thank you very much for your time and trouble
