ATTACHED COMPUTATIONS for Proof of application of Water to beneficial use, for Albert K. and Barbara N. Francisco.

Average number of minutes pump runs per day: 56.

Average rate of flow: 8 gallons per minute (when system is halfway between high and low pressure points).

The above was obtained by ~~correcting~~ a clock to the pump wiring, and noting the number of minutes it took as an increase in reading on several days. Rate of flow measurement resulted from holding a hose in a five gallon bucket and seeing how many gallons were pumped per minute when the pump/pressure system was at equilibrium at approximately 35 psi pressure.

DETERMINATION OF ACRE-FEET USED PER ANNUM:

Daily use: 56 minutes per day times 8 gallons per minute = 448 gallons

Yearly use: 448 gallons per day times 365 days per year = 163,520 gallons

Yearly acre-feet used:

$$\frac{163,520 \text{ gallons per year}}{3.259 \times 10^5 \text{ conversion factor}} = 0.5 \text{ acre-feet per year.}$$

EXPLANATION: Intestinal bacteria should not be present in your water supply. The presence of these organisms indicates that your water is contaminated. This may be due either to poor quality of water at its source or improper construction and maintenance of the system. Because the quality of water may vary from time to time, it is recommended that repeat samples be submitted. For Department of Health recommendations or approval of your water supply, please contact your sanitarian or public health engineer.
