Attn: Corbin Knowles

Dear Sir:

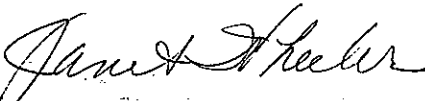

Per our conversation, I am reaffirming the installation of a 6" Mc. Crometer Water meter on May 25, 2005 by K&R Repairs, Inc., Niter, Idaho.

It was my understanding at the time the acceptability of this meter by the Idaho Water Board for measuring of water flow from the Bear River for irrigation purposes. It is also my understanding that this meter was tested for compliance the irrigation season of 2007 and at that time it may have exceeded the 10 per cent requirement. At this time I would like to request a retest before the meter is repaired or replaced.

Would you please advise accordingly and if a retest is granted, would you please let me know how and when this might be accomplished so that I could be present or have someone there in addition to the person who rents the ground.

Thank you for your help and direction concerning a measuring device and its test or replacement. I will greatly appreciate hearing from you.

Sincerely,

Janet Wheeler
