

WD 29 Annals MTO Mon, March 4, 1996 T. LUKE

1) Review of min's. from 73

- a lot of discussion about hydroplant cost LAVA not spg =
potentially I go to address problem. → problem is backing out of
& impeding NAT. flow.

2) Discussion Editorial Political

- Ignore. Bait overheard
- J.N. rated a number of questions from the
- some people agree that storage water is not
From point A to point B, even though water river
is a naturally occurring river. People only operate
river once, but still feel that storage must last
& should be changed last, some people understand why
people are afraid, nature of problem is difficult.

3) No New Complaints about hydroplant.

4) Budget. see and sample.

McCammens Wants - discussion w/ Byron Allen
after MTO.

- a) Wants survey completed so they can put it behind them
- I sense it is more matter of principle, if Dept can
commit to completing this yr, then this may be OK.
- b) Meas. Devies on PMU-PIC circuit,
- want = IDWR to make a decision - preferably in
writing, either we will or will not require meas. & Fine tuning
Byron is unsure that this may not help in long run,
But let's try & see.
- c) expansion of response,
- McCammens doesn't understand storage Rts, too over-
sensitive primary Rts ~~to~~ holders get written into
SR Rts. are not.
