RE: Rockwell By-Pass System

Dear Ed:

The Rockwell By-Pass System need a control gate and a measuring device at the head of the diversion from the slough.

Idaho Code 42-701 states in part:

"The appropriators or users of any public waters of the state of Idaho shall maintain to the satisfaction of the director of the department of water resources suitable headgates and controlling works at the point where their water is diverted. Each device shall be of such construction that it can be locked and kept closed by the watermaster or other officer in charge, and shall also be of such construction as to regulate the flow of water at the diversion point."

Failure to do so may result in the director of water resources instructing the watermaster to shut off and refuse to deliver at the point of diversion, the water owned by such appropriator or user until the user does construct and maintain such headgates, controlling works or measuring devices or remedy the defects which exist.

Repair of this diversion needs to be done prior to the 1998 irrigation season; otherwise we will not deliver any water until repairs are complete.

If we can be of any assistance please feel free to call.

Sincerely,

A handwritten signature in cursive script that reads "Lee R. Peterson".
